Executive Summary

Alaska highway system maintenance costs have been compiled and summarized at the request of Robert W. Ward, Commissioner of the Department of Transportation and Public Facilities. The State highway system was subdivided into three geographic areas and eight roadway types. The areas as shown in Figure 1 are as follows:

- Area I includes most of the Central, and all of the Southcentral and Southeast maintenance regions.
- Area II includes the Interior maintenance region in its entirety.
- Area III includes all of the Western maintenance region and that portion of the Central maintenance region lying west of the 165th parallel, extended south to the Kuskokwim River, thence to the Bering Sea along the meander line of the Kuskokwim River.

The Highway system has also been subdivided into the five existing maintenance regions and eight roadway types. The roadway types are categorized as:

- Type I: 4-lane paved urban routes
- Type II: 4-lane paved rural routes
- Type III: 2-lane paved urban routes
- Type IV: 2-lane paved rural primary routes
- Type V: 2-lane paved rural secondary routes
- Type VI: 2-lane gravel secondary routes
- Type VII: Minimum service routes (<20 ft. gravel surface)
- Type VIII: 2-lane local routes (paved or unpaved)

Table 1 summarizes the average total maintenance costs per lane mile for each roadway type in each area. These data are graphically shown in Figure 2. The overhead rate was derived by dividing the sum of administrative and facilities maintenance costs by the highway maintenance budget. Table 2 summarizes the average total maintenance costs per lane mile for each maintenance region and roadway type. Figure 3 graphically displays these data. It was estimated that 20% of administrative costs were expended on airport maintenance overhead and were therefore subtracted from that budget before computing the highway maintenance overhead rate. More detailed cost breakdowns are available within the main body of the report.

It should be noted that the Maintenance and Operations Division currently functions on a deferred maintenance budget, i.e. only basic preventive maintenance can be performed. As a consequence, the life of a roadway is significantly shortened. This is evidenced by the 10% increase of paved highway mileage exhibiting fatigue cracking statewide between 1978 and 1981 (from the 1978-1981 Pavement System Inventory).

Table 1

SUMMARY OF AVERAGE TOTAL MAINTENANCE COST/LANE MILE/YEAR
Including Overhead Costs

Roadway Type	Typical Surface Width (ft.)	A R E A I			A R E A I I			A R E A I I I		
		Mainte- nance Cost	Overhead (31%)	Total	Mainte- nance Cost	Overhead (31%)	Total	Mainte- nance Cost	Overhead (31%)	Total
I	48	\$ 3,152	\$ 977	\$ 4,129	\$18,936	\$ 5,870	\$24,806*	-0-	-0-	-0-
II	48	3,177	985	4,162	4,775	1,480	6,255	-0-	-0-	-0-
III	24	4,842	1,501	6,343	9,381	2,908	12,289	-0-	-0-	-0-
IV	24	4,605	1,428	6,033	3,383	1,049	4,432	\$11,764	\$ 3,647	\$15,411
V	24	3,606	1,118	4,724	2,955	916	3,871	2,002	621	2,623
VI	32	2,784	863	3,647	2,233	692	2,925	2,060	639	2,699
VII	18	4,088	1,267	5,355	3,026	938	3,964	2,811	871	3,682
VIII	24	3,245	1,006	4,251	1,895	587	2,482	1,423	441	1,864

* It has been noted that the \$24,806 cost/lane mile shown for Type I roadways located in the Interior Maintenance Region, also described as Area II, can be attributed to the high maintenance costs associated with chain link fencing which existed as a traffic separator on portions of Route 170000 (Parks Highway), during the time period associated with costs shown in this report. The chain link fencing has been replaced with concrete traffic separators which should contribute to reduced future maintenance costs.

* It has been noted that the \$24,806 cost/lane mile shown for Type I roadways located in the Interior Maintenance Region, also described as Area II, can be attributed to the high maintenance costs associated with chain link fencing which existed as a traffic separator on portions of Route 170000 (Parks Highway), during the time period associated with costs shown in this report. The chain link fencing has been replaced with concrete traffic separators which should contribute to reduced future maintenance costs.

COMPARISON OF AVERAGE TOTAL MAINTENANCE COSTS BY MAINTENANCE REGION

(Including Overhead Costs)

Introduction

This report was initiated at the request of Commissioner Robert W. Ward for the compilation and assembly of information showing the average cost per mile for maintenance of the State highway system.

Average maintenance costs per mile are compiled for each route in the State highway system with the routes divided into eight types of roadways within each of three geographic areas and each of the five maintenance regions of the State as defined under the "Definitions" section. All route mileages shown in the General Road Log are converted to equivalent 12 foot travel lane widths. For example, one mile of roadway surface 24 feet in width equals two lane miles. The report furnishes highway maintenance information showing:

1. The average cost per lane mile for each route subdivided into the appropriate roadway types by area and maintenance region.
2. The average cost per lane mile by route within each of the three geographic areas and maintenance regions.
3. A summary of the average cost per lane mile for each roadway type within each area and region.
4. The average cost per lane mile for the major types of service performed by Maintenance and Operations (M&O) based on the total mileage of each roadway type within the areas and region.
5. A statewide summary of the average cost per lane mile for each M&O service type and a total statewide average maintenance cost per lane mile.

The tabulated numerical information in this report is illustrated by Figures 2 through 15.

Since this report is intended to be a working document, the organization is somewhat different than normal. The report begins with a broad overview of the data compiled, then becomes more detailed as it progresses.

DEFINITIONS

Definition of Geographic Areas

To determine roadway maintenance costs the highway system was divided into three geographic areas identified as Areas I, II and III, and as shown in Figure 1.

Area I includes most of the Central, and all of the Southcentral, and Southeastern maintenance regions. This area basically includes all areas south of the Alaska range and not contained within Area III shown in Figure 1. Area I contains 52 percent of the total lane miles of all State maintained routes.

Area II is exclusively the Interior maintenance region and lies north of the Alaska Range and east of the 156th parallel. Area II contains 42 percent of the total lane miles of all routes.

Area III includes the Western maintenance region and that portion of the Central maintenance region lying west of the 165th parallel extended south to the Kuskokwim River, thence to the Bering Sea along the meander line of the Kuskokwim River. Area III contains 6 percent of the total lane miles of all routes.

The maintenance regions are also shown in Figure 1.

Definitions of Roadway Types

The definitions of the eight roadway types as shown below were established using the Department of Transportation and Public Facilities General Road Log dated 01/01/81 together with information obtained from the Alaska Highways Annual Traffic Volume Report, Volume 1, 1978.

Eight Roadway Types

<u>Type</u>	<u>Description</u>
I.	4-Lane Paved Urban
II.	4-Lane Paved Rural
III.	2-Lane Urban Paved Primary
IV.	2-Lane Paved Rural Primary
V.	2-Lane Paved Rural Secondary
VI.	2-Lane Gravel Secondary Arterials
VII.	Minimum Service Road (less than 20 ft. Gravel Surface)
VIII.	2-Lane Local Routes (Paved or Unpaved)

Expanded definitions for each of the eight type headings are as follows:

Type I, 4-Lane Paved Urban

This roadway type includes all 4-lane routes under F.A.U. (Federal Aid Urban) designation as shown in the Annual Traffic Volume Report, and is described in the General Road Log as four paved traffic lanes. This type totals 2 percent of the route mileage in the State highway system.

Type II, 4-Lane Paved Rural

Type II roadways include all 4-lane routes not designated F.A.U. in the Annual Traffic Volume Report. This type totals 3 percent of the route mileage in the State highway system.

Type III, 2-Lane Paved Urban Primary

Type III roadways include all 2-lane paved routes under F.A.U. designation and urban F.A.P. (Federal Aid Primary) designation as shown in the Annual Traffic Volume Report. This type totals 1 percent of the route mileage in the State highway system.

Type IV, 2-Lane Paved Rural Primary

Type IV roadways include all 2-lane paved rural routes under F.A.P. designation as shown in the Annual Traffic Volume Report. This type totals 29 percent of the route mileage in the State highway system.

Type V, 2-Lane Paved Rural Secondary

This type includes all 2-lane paved routes under F.A.S. (Federal Aid Secondary) designation as shown in the Annual Traffic Volume Report. This type totals 13 percent of the route mileage in the State highway system.

Type VI, 2-Lane Gravel Secondary Arterials

Type VI roadways include all 2-lane gravel surfaced routes greater than 20 feet in width. Some routes of this type are non-federal aid routes while others are F.A.S. designated routes. This type totals 31 percent of the route mileage in the State highway system.

Type VII, Minimum Service Roads (Less than 20 ft. Gravel Surface)

Type VII roadways include all unpaved routes described in the General Road Log as being less than 20 feet in width. This type totals 5 percent of the route mileage in the State highway system.

Type VIII, 2-Lane Local Roads (Paved or unpaved)

Type VIII roadways include all routes described in the General Road Log

which are not included in type I through VII. The majority of the routes in this group are 2-lane local roadways. While this roadway type may actually include any of the other seven roadway types, it is not possible to determine the individual route costs since these routes were grouped by M&O for cost accounting purposes. This type totals 16 percent of the route mileage in the State highway system.

Discussion of the Data by Geographic Area

The Division of Maintenance and Operations currently maintains approximately 10,300 lane miles of roadway. The distribution of lane miles by area and roadway type is summarized in Table 3 below. Descriptions of areas and roadway types are found in the section entitled "Definitions".

Table 3

Summary of Roadway Mileage (Lane Miles)

<u>Area</u>	<u>Roadway Type</u>								<u>Total</u>
	<u>I</u>	<u>II</u>	<u>III</u>	<u>IV</u>	<u>V</u>	<u>VI</u>	<u>VII</u>	<u>VIII</u>	
I.	143	140	146	1,807	807	953	296	1,051	5,344
II.	21	145	10	1,150	352	2,037	137	507	4,359
III.	<u>0</u>	<u>0</u>	<u>0</u>	<u>4</u>	<u>170</u>	<u>255</u>	<u>69</u>	<u>137</u>	<u>635</u>
Totals	164	285	156	2,961	1,329	3,245	502	1,695	10,337

The average cost per lane mile is summarized in Table 4. It must be remembered that these costs relate to a roadway section one mile in length and 12 feet in width. For example a 2-lane primary rural roadway (Type IV) in Area I with a 24 foot paved surface would cost on an average of \$4,605 per lane mile each year or \$9,210 per mile ($\$4,605 \times 24/12$) to maintain. The same roadway type with a 30 foot paved surface would cost \$11,513 per mile each year ($\$4,605 \times 30/12$) to maintain.

Figures 4 through 8 compare the average costs of maintaining the various types of roadways. Because of the variations in unit costs for labor, equipment, materials and shipping, the data shown in these figures do not allow direct comparison between areas for the level of maintenance performed.

Figure 9 shows the distribution of expenditures in each area for each roadway type and simply shows the relative costs of the four types of maintenance service.

It should be noted that while the arithmetic average (mean) is useful, it can be misleading, especially when large variances in the data are involved. Figure 10 shows these variations and where the mean falls within these data. As can be seen from Figure 10, the maximum cost/lane mile for any given roadway type can be as great as 23 times the mean cost. These variations may be a function of terrain, traffic, design, construction techniques, age of the facility, etc. It is generally better to estimate the cost of maintaining a roadway type based on a similar section rather than an average cost.

By dividing the administrative and facilities maintenance costs by the total roadway maintenance costs, overhead was computed to be 31%. Since an estimated 20% of the administrative costs were aviation maintenance related, the calculations were reduced by this amount before the computation of overhead. The overhead costs were not included in the data presented unless specifically noted.

TABLE 4

SUMMARY OF AVERAGE MAINTENANCE COSTS
by Geographic Area

Roadway Type	Maintenance Service	Geographic Area

Discussion of the Data by Existing Maintenance Region

The distribution of lane miles by existing maintenance region is shown in Table 5 below. Region boundaries are shown on the map in Figure 1.

Table 5

Summary of Roadway Mileage (Lane Miles)
by Maintenance Region

<u>Region</u>	<u>Roadway Type</u>								<u>Total</u>
	<u>I</u>	<u>II</u>	<u>III</u>	<u>IV</u>	<u>V</u>	<u>VI</u>	<u>VII</u>	<u>VIII</u>	
Interior	21	145	10	1,150	352	2,037	137	507	4,359
South- central	0	0	0	719	75	318	97	56	1,265
South- eastern	7	31	9	102	243	169	93	191	845
Western	0	0	0	4	162	253	69	124	612
Central	136	109	137	986	497	468	106	817	3,256
Totals	164	285	156	2,961	1,329	3,245	502	1,695	10,337

The average cost/lane mile is summarized in Table 6. Remember that these costs relate to a roadway section one mile in length and 12 feet in width.

Figures 11 through 15 compare the average costs of maintaining the various types of roadways within each region. As was stated earlier, the variations in unit costs for labor, equipment and materials do not allow direct comparison between regions for the level of maintenance performed.

Considerable care should be taken when using these averages because of the large variation in the data (see Figure 10). Whenever possible, the M&C

costs of a roadway section of a similar type in the close proximity should be used to estimate the costs of a roadway rather than average costs.

An overhead of 31 percent was computed. However, unless specifically stated, the data presented does not include overhead costs.

COMPILATION OF AIRPORT COSTS

Executive Summary

At the request of Robert W. Ward, Commissioner of the Department of Transportation and Public Facilities, State operated airport maintenance costs have been compiled and summarized. This work was accomplished through a professional services agreement with TRA/Farr of Anchorage.

The report developed by TRA/Farr provides average annual maintenance costs that are organized by geographic area, airport type, and cost category. Maintenance costs for Fairbanks and Anchorage International Airports and for municipally or privately owned airports were not compiled for this study. The maintenance and operations (M&O) data collected covers the past three fiscal years: FY79, FY80, and FY81.

The geographic areas shown in Figure 1 are as follows:

- Area I includes all of the Central, Southcentral, and Southeast M&O regions.
- Area II encompasses the Interior M&O region.
- Area III encompasses the Western M&O region.

The airport types which are fully defined within the main body of the report are Regional Center, Regional, Transport, and Community. The airport maintenance cost categories are Runway Surface, Airport Facilities, Traffic Services, and Snow and Ice Control.

Tables 1 and 2 summarize the average total maintenance cost per airport for each airport type in each area and also identifies the number of airports by type within each area. The overhead rates are calculated at 22.8 percent of maintenance for Area I, 31.7 percent for Area II, and 21.1 percent for Area III.

More detailed cost breakdowns are available for each airport and are included within the appendices to the report. In view of recent capital improvement programs, care must be taken to avoid misapplication of the

data presented. For example a large number of the Community airports have recently received improvements such as runway lighting, navigational aids, and terminal buildings while in the same time frame the runways have been resurfaced or upgraded. The former type of improvements increase maintenance costs initially and these costs tend to grow rapidly with time, while the latter type may have the net effect of reducing current maintenance costs and having later maintenance deferred until future capital improvements are made. Therefore, the historical data presented does not allow the comparison of maintenance costs for such situations as lit versus unlit or paved versus gravel surfaced runways at Community airports. However, as a consequence, significant increases in maintenance costs, although not apparent in the data presented, must be anticipated.

Table 1

TOTAL AVERAGE MAINTENANCE COSTS AND OVERHEAD COSTS

COMPILATION OF AIRPORT MAINTENANCE COSTS

Introduction

This report provides average annual maintenance costs for Department of Transportation and Public Facilities (DOTPF) maintained airports, excluding Fairbanks and Anchorage International airports. TRA/Farr developed this document as part of its efforts in developing the Alaska Aviation System Plan. The average costs are organized by airport type, cost category, and geographic area. Unless otherwise noted, all mean costs represent maintenance and operation (M&O) costs only and do not include overhead. Overhead costs were identified, however, and they, along with average airport maintenance costs arranged by airport type and area, are displayed in Exhibit 1.

Methodology

M&O data was collected for all DOTPF-maintained airports (excluding Fairbanks and Anchorage International airports) for the past three fiscal years: 1979, 1980, and 1981.¹ This data is contained in Appendix 1. The data was aggregated by four M&O cost categories: runway surface, airport facilities, traffic services, and snow and ice control. A more detailed breakdown of these cost categories indicating the cost

elements within each major grouping is contained in Appendix 2. In addition, all airport maintenance contracts let during the study period were identified and their amounts recorded. The contract amounts, organized by airport and area, are contained in Appendix 3. It remained unclear whether the contract amounts were included within the original cost data gathered, that is, whether it was recorded as an M&O cost by the DOTPF accounting system. To handle this problem, the following procedure was established. If the contract amount was greater than the sum of M&O costs originally obtained, it was included in the cost calculations. If the contract amount was less than the sum of total costs, it was ignored and not included in further considerations. The contracts were awarded in a lump sum without a detailed breakdown as to maintenance cost category. It was assumed that the bulk (if not all) of the contract amount went for snow and ice removal. Thus, while other types of maintenance may be accomplished by means of contract, for purposes of this analysis the contract amounts were added to snow and ice removal.

In order to account for inflation, all cost data was converted to 1981 dollars. This was done by adjusting fiscal 1979 and 1980 costs by means of the Bureau of Labor Statistics' Anchorage consumer price index for all urban consumers.² The three-year M&O costs (represented in 1981 dollars) were averaged for all DOTPF-maintained airports by maintenance cost category.

The airports were grouped by four airport types: regional center, regional, transport, and community. A description of each airport type is contained in Appendix 4. The airports, grouped by type, were then located within three geographic areas. Area I was composed of the Central, Southcentral, and Southeast maintenance regions. Area II is coterminous with the Interior maintenance region. And Area III encompasses the Western maintenance region. M&O cost data in 1981 dollars, including three-year average costs for individual airports, arrayed by airport type, cost category, and area, are contained in Appendix 5.

Fiscal year 1981 airport overhead data was obtained for all areas.³ The ratio of fiscal year 1981 total overhead cost to fiscal year 1981 total maintenance cost was calculated for each area. This proportion was then used to determine the average overhead for each airport type within each area; that is, the average M&O costs by airport type and area were multiplied by the fiscal year 1981 ratio of total overhead to total M&O costs. The ratio of overhead to M&O costs for each area is shown in Exhibit 1.

Results

Exhibit 2 provides the distribution of State-owned airports used in this study by type and area. These are State-owned airports which had maintenance costs for at least one of the three fiscal years of the

System Plan

study period. An additional thirteen seaplane airports appeared in the data base, but only two had M&O costs for any year. Since there were too few observations, average maintenance costs for seaplane airports were not derived.

Exhibit 3 displays average airport M&O cost by cost category, airport type, and area. Figures 1 to 5 display the same data graphically. Exhibit 4 and Figure 6 display the percent distribution of costs by airport and area. Care should be taken in the use of the averages presented. Averages can represent widely dispersed data. The M&O data tended to vary greatly within fiscal years, airport types, cost categories, and areas. More analysis would be required to fully explain and understand this variance.

NOTES

1. The source of the data was a computer printout entitled "Alaska Department of Transportation and Public Facilities, Summary of Cost Per Mile by Route and Station" (R01-14R-9548) for the periods ending June 30, 1979; June 30, 1980; and June 30, 1981.
2. The Anchorage consumer price indexes used in this study for the appropriate years are as follows:

<u>Fiscal Year</u>	<u>CPI Calendar Year</u>	<u>CPI-U Index*</u>
1979	1978	187.5
1980	1979	207.0
1981	1980	228.2

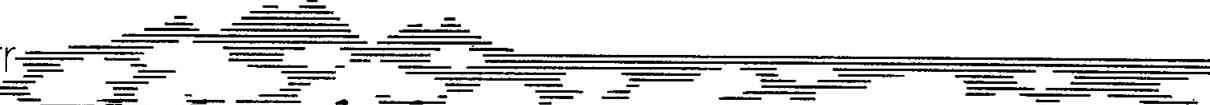

*October, 1967 = 100

3. The source for this data was microfiche located in the Anchorage DOT/PF office, entitled "Alaska Department of Transportation and Public Facilities, Project Master File" (R01-14R-2200) for the month ending June 30, 1981.

APPENDIX 2

COMPOSITION OF AIRPORT MAINTENANCE COSTS
BY COST CATEGORY

COMPOSITION OF AIRPORT MAINTENANCE COSTS
BY COST CATEGORY

Roadway and Runway Surface

- Patching - hand
- Patching - machine, overlay and leveling
- Pavement crack and joint sealing - hand
- Seal coating - chip, sand and fog, slurry
- Blading and restoring unpaved surfaces and shoulders,
Dust Control
- Base stabilization and repair - spot gravel
- Base stabilization and repair - general grading

Airport and Roadside Facilities

- Cleaning drainage structures
- Drainage structure, replacement or repair
- Cleaning and shaping ditches
- Slope repair - washout and erosion
- Stream bed maintenance
- Path and trail maintenance
- Fence, gate and cattle guard maintenance
- Litter barrel and trash cleanup
- Sweeping - machine
- Sweeping - hand
- Patrol and inspection

Traffic Services

- Sign installation, replacement and maintenance
- Delineator posts, reflectors and milepost markets - install,
replace and clean tie-downs
- Guard rail maintenance
- Pavement striping - machine
- Pavement marking or removal - hand machine
- Roadway and sign lighting - maintenance and illumination
- Traffic signal maintenance and power

Snow and Ice Control

- Snow removal
- Avalanche control and cleanup
- Thawing/related costs
- Sanding and ice control

APPENDIX 4
AIRPORT TYPE DEFINITIONS

AIRPORT TYPE DEFINITIONS

AIRPORT CLASS	AVIATION SERVICE TYPE	DOT/PF
Regional Center	Primary intrastate access point to region of Alaska, and to regional centers with population over 1,000; scheduled interstate and intrastate jet service; regional transshipment, storage, and distribution center for regional air cargo and mail; operations base for ATC certificated intrastate scheduled passenger carriers, and for small-medium capacity scheduled cargo carriers; operations base for scheduled air taxi operators; runway precision instrument capability.	Trunk
Regional	Secondary intrastate access point within a region, and primary access to large rural community with population over 1,000; serves as area collection and distribution center for scheduled passenger, cargo, and mail distribution to and from Regional Center airport; operations base for air taxi operators; runway precision and non-precision instrument capability.	Transport
Transport	Primary access point to medium-sized community served by scheduled ATC certificated intrastate carrier and air taxi; most passenger, cargo, and mail origin or destination based; base for private general aviation aircraft; runway non-precision instrument or visual flight rules capability.	Transport
Community	Primary access point to small rural community; served by scheduled, air taxi, or unscheduled charter service; no transshipment with all passengers and cargo origin or destination based; runway non-precision instrument or visual flight rules capability.	Secondary
