**Re: Comments on Juneau Access Improvements Project Draft  
Supplemental Environmental Impact Statement**

Dear Mr. Haugh,

Thank you for the opportunity to submit comments on the Juneau Access Improvement Project Draft Supplemental Environmental Impact Statement, Project No. STP-000S(131) (the DSEIS). The Alaska Department of Transportation and Public Facilities (the Alaska DOT) prepared the DSEIS in cooperation with the Federal Highway Administration (the FHWA) to consider alternative ways of improving surface transportation in the Lynn Canal/Taiya Inlet Corridor between Juneau and Haines/Skagway.

For the reasons described below, the undersigned groups urge the FHWA to reject the State of Alaska's preferred alternative in the DSEIS and instead support the safer, cheaper, and less environmentally damaging alternative of continued community-to-community ferry service.

**I. The DSEIS's Alternatives Analysis is Arbitrary and Unlawful  
Because the Development of Alternatives Lacks the Rigor Required  
by NEPA.**

The Ninth Circuit remanded the 2006 Final Environmental Impact Statement (the 2006 FEIS)

for the Juneau Access Improvements Project because the 2006 FEIS failed “to examine a viable and reasonable alternative to the proposed project,” violating the National Environmental Policy Act (NEPA), which requires agencies to “[r]igorously explore and objectively evaluate all reasonable alternatives.” *Se. Alaska Conservation Council v. Fed. Highway Admin.*, 649 F.3d 1050, 1059 (9th Cir. 2011) (quoting 40 C.F.R. § 1502.14(a)). The alternatives analysis is “the heart of the environmental impact statement.” 40 C.F.R. § 1502.14. “The consideration of alternatives requirement . . . guarantee[s] that agency decisionmakers have before them and take into proper account all possible approaches to a particular project (*including total abandonment of the project*) which would alter the environmental impact and the cost-benefit balance.” *Pit River Tribe v. U.S. Forest Serv.*, 469 F.3d 768, 785 (9th Cir. 2006) (quoting *Bob Marshall Alliance v. Hodel*, 852 F.2d 1223, 1228 (9th Cir. 1988)) (alterations and emphasis in original). The FHWA and Alaska DOT, however, have failed to comply with NEPA and the court’s order because the new Alternative 1B has not been “rigorously explore[d]” or developed, leading once again to a skewed comparison of alternatives favoring the agencies’ preferred alternative.

RESPONSE: The Alaska Department of Transportation and Public Facilities (DOT&PF) and Federal Highway Administration (FHWA) dispute the assertion that Alternative 1B fails to comply with National Environmental Policy Act (NEPA) or the Ninth Circuit Court’s order. Alaska Marine Highway System (AMHS) staff and other DOT&PF professionals developed a new alternative based on direction from the Court, shared a draft of that alternative with the public during a new scoping effort for the 2014 Draft Supplemental Environmental Impact Statement (SEIS), took input on the new alternative, and revised that alternative based on the scoping comments received.

The new alternative took into account changes that had occurred to the “existing assets” in the AMHS fleet since the 2006 Final EIS, the capabilities of the vessels in the fleet, and the needs and mission of the fleet to the numerous communities served by AMHS. DOT&PF and FHWA fully disclosed the thought process and evaluation in the Draft SEIS.

Appendix CC of the Draft SEIS describes the efforts undertaken to develop Alternative 1B and documents the data and analysis relied upon to create as reasonable an alternative as possible toward solving the transportation problems in the corridor using only existing assets. Alternative 1B incorporated the following considerations:

- Existing AMHS assets reasonably available and feasible for use in Lynn Canal
- Programmed AMHS assets (decisions by AMHS independent of this project that made new Day Boats available in the fleet)
- Enhancements that could be employed, as suggested by the Plaintiffs, that do not involve substantial initial capital investments

The resulting alternative, Alternative 1B, was rigorously analyzed in context of the project’s purpose and need and as part of NEPA requirements for the consideration of alternatives.

Alternative 1B was added “[i]n direct response to the court ruling.” DSEIS at ES-1. The primary differences between Alternative 1B, the enhanced ferry service alternative, and Alternative 1, the no action alternative, are the use of the *M/V Malaspina* as a summer shuttle

which would otherwise be retired under Alternative 1, a 20 percent reduction in fares for Lynn Canal trips, and an extension in business hours at the reservation call center. *Id.* at ES-3. The effect of these differences amounts to one extra trip per week to Skagway in the summer, a modest reduction in travel time to Skagway in the summer, an increase in capacity in the summer, and a reduction in user costs relative to the no action alternative. *See id.* at ES-16 (Table ES-1), 2-11 (Table 2-2), 2-13 (Table 2-5).

RESPONSE: Alternative 1B was updated based on comments received on the Draft SEIS. In the Final SEIS, the *M/V Malaspina* would provide one round trip per day, 5 days per week on a Skagway-Auke Bay-Skagway route. On the sixth day, the *M/V Malaspina* would sail on the Skagway-Auke Bay-Haines-Skagway route, and on the seventh day, it would sail that route in reverse (Skagway-Haines-Auke Bay-Skagway). This is in addition to the seven trips that could be made by taking the Day Boat ACF from Auke Bay to Haines and transferring ferries and the two weekly mainliner trips (the same as in Alternative 1 – No Action). The trip between Juneau and Skagway on the *M/V Malaspina* takes 6.8 hours, which is 1.3 hour shorter than the 8.1 hours the trip would have using the Day Boat ACFs and transferring in Haines. Chapter 2 and the Executive Summary of the Final SEIS have been updated to address confusion regarding the trip frequency associated with Alternative 1B.

The Ninth Circuit faulted the 2006 FEIS for failing to give “the ‘substantial treatment’ required by NEPA’s implementing regulations to any non-construction alternatives.” *Se. Alaska Conservation Council*, 649 F.3d at 1058 (citing 40 C.F.R. § 1502.14(b)). The court called the 2006 FEIS’s consideration of the no action alternative “cursory” in part because it “assert[ed] that using more ferries would reduce service elsewhere (without explaining the comparative needs for such services).” *Id.* The DSEIS still fails to address system-wide comparative needs and again asserts its goal is to ensure that service elsewhere in the system is not diminished. DSEIS at 7-7, 7-13. Appendix CC, which explains how Alternative 1B was developed, contains a description of why certain vessels are needed on certain routes, but the reasons given do not include even the level of use of those routes, let alone what the demand is and whether demand could still be met using a different schedule than is currently set.

RESPONSE: The Draft SEIS did not fail to address system-wide comparative needs. As the commenter acknowledges, Appendix CC explains how Alternative 1B was developed and describes why certain vessels are needed on certain routes. DOT&PF established a goal that the new alternative would need to address the purpose and need in Lynn Canal, but not by diminishing service elsewhere in the system. As is explained in Appendix CC of the Draft SEIS, DOT&PF considered technical capabilities of the vessels, vessel size, operating conditions, and the effect on the AMHS mission (i.e., whether a vessel could be moved or shared with other routes such that it could provide Lynn Canal service while also maintaining the level of service committed to in the other communities). The examination of each vessel was disclosed in Appendix CC. In part, vessels were rejected as being reasonable for Lynn Canal service because reassigning those vessels to Lynn Canal would be at the expense of reduced service elsewhere. To this extent, DOT&PF considered demand on other routes in the system. As explained in Appendix CC of the Draft SEIS, certain AMHS ferries are not suitable for use in Lynn Canal because relocating/diverting the ferry to Lynn Canal would jeopardize the AMHS mission, including impacts on demand, level of service, and schedule

considerations.

*See, e.g.*, DSEIS, Appendix CC: Development of Alternative 1B–Enhanced Service with Existing Alaska Marine Highway System (AMHS) Assets (2014 App. CC) at 7-8 (May 2014). For example, Appendix CC deems it not reasonable for the *M/V Taku* to assist in improving Lynn Canal transportation because it would “reduc[e] or eliminat[e] service” to Prince Rupert, as the *M/V Taku* is one of few vessels that comply with international safety regulations. 2014 App. CC at 5, 7-8. Appendix CC does not quantify the demand for travel to and from Prince Rupert and the capacity necessary to serve it, whether the route taken by the *M/V Taku* north of Prince Rupert could be altered, since it stops in six other ports, *see* Ex. 9,<sup>1</sup> the demand for the other ports and routes served by the *M/V Taku*, or whether other vessels could be upgraded to comply with international safety regulations. The closest the DSEIS comes to complying with the court’s instructions is an unsupported statement that the *Taku* and *Matanuska* are “needed to meet schedule and demands of Prince Rupert, B.C. run.” 2014 App. CC at 6. This statement does not “explain[] the comparative needs for such services,” *see Se. Alaska Conservation Council*, 649 F.3d at 1058, nor is it sufficient to foster informed decision making.

RESPONSE: DOT&PF and FHWA considered the *M/V Taku* during development of Alternative 1B for the Draft SEIS and explained why it was not a reasonable vessel to move from its duties serving Prince Rupert (see Appendix CC of the Draft SEIS). In making such a determination, DOT&PF considered the schedule, demand, and operating conditions of each of the vessels. The run to Prince Rupert must use a ferry that meets Safety of Life at Sea (SOLAS) regulations. Per the Court’s direction, the SEIS must evaluate an alternative that relies on existing ferry assets and terminals, without new construction. Upgrading an existing AMHS non-SOLAS ferry to be SOLAS compliant would be a major capital investment, which would not be consistent with the Court’s direction.

With limited vessels in the fleet meeting SOLAS requirements, DOT&PF/AMHS determined it was not reasonable to relocate the *M/V Taku* from its mission without service interruption to Prince Rupert (and the other communities on that route). Lynn Canal (Juneau-Haines-Skagway) is at the far northern end of the service area, while Prince Rupert is at the far southern end, making it not possible for the *M/V Taku* to share part of its service week with the Lynn Canal run. As determined in Appendix CC of the Draft SEIS, to permanently move this vessel north would be at the expense of Prince Rupert service.

Note that the *M/V Taku* is not available, as it has been retired and sold. See Revised Appendix CC of the Final SEIS for updated information related to the development of Alternative 1B and changes since the Draft SEIS was issued.

Similar reasons are given for excluding the *M/V Matanuska* and the *M/V Kennicott*, and none of the descriptions of vessels used in Southeast Alaska provides information concerning relative need or demand on the routes each serves. *See* 2014 App. CC at 7-10. This discussion of rerouting existing ferries lacks the rigor necessary to explore a reasonable

---

<sup>1</sup> The key to the abbreviations used in the Alaska Marine Highway System ferry schedules is included as Exhibit 11.

version of Alternative 1B, and results in almost insignificant differences between the no action alternative and Alternative 1B. See DSEIS at 2-11 to 2-14 (showing an increase of one roundtrip per week in the summer in Lynn Canal and increased capacity during the summer, but no difference in travel time to Haines and only a slight reduction in travel time to Skagway in the summer).

RESPONSE: While it is true that some vessels in the fleet are not at capacity, the commenter does not seem to account for the logistical, technical, and functional challenges involved with trying to move vessels from one part of the service area to another. As explained in Appendix CC of the Draft SEIS, vessels built for specific functions cannot be relocated to Lynn Canal without jeopardizing the mission/function that those vessels are providing in other parts of the system (even if they are not as full as the commenter would like).

In this instance, the commenter recommends examining the demand and moving the *M/V Matanuska* and *M/V Kennicott* for use in Lynn Canal. Regardless of the specific demand and capacities of these vessels, they were designed for and perform very specific functions in the system. As is explained in Appendix CC of the Final SEIS, the *M/V Kennicott* is one of two accredited ocean-going vessels in the AMHS fleet (the other is the *M/V Tustumena*). These vessels are capable of safely making the ocean-going crossing of the Gulf of Alaska, a potentially dangerous endeavor that requires a ship built for such a function and sea conditions. Due to its age and the ongoing cost of repairs, the *M/V Tustumena* is now scheduled to be replaced when construction funding for its replacement is available. However, without major capital refurbishment, the *M/V Tustumena* is not suitable to continue long-term service and was not included as a reasonable component of Alternative 1B. Moving *M/V Kennicott* to serve Lynn Canal means cross-gulf trips would be eliminated, leaving Yakutat without surface access. Yakutat has no road connection, while other communities on the cross-gulf route have road access. This is an unsafe, unpractical, and unreasonable proposal.

Similar problems are involved with trying to use the *M/V Matanuska*, the sister ship to the *M/V Malaspina*. One major difference between the two vessels is that the *M/V Matanuska* is SOLAS compliant, while the *M/V Malaspina* is not. Using the *M/V Matanuska* in Lynn Canal would leave AMHS unable to meet the schedule and demand to Prince Rupert as AMHS has no other SOLAS compliant ferry to take over its route. The *M/V Taku*, the only other SOLAS compliant ferry is not available for use because AMHS has retired it and put it up for sale in March 2017. Nonetheless, because *M/V Matanuska* and *M/V Malaspina* are sister ships, they have very similar operating costs, speeds, etc. In other words, there would be no advantage to considering the *M/V Matanuska* over the *M/V Malaspina* in terms of costs, speeds, etc. DOT&PF and FHWA explained these reasons in Appendix CC of the Draft SEIS. Additional explanation has been added to Appendix CC of the Final SEIS to clear up any potential confusion.

Regarding the suggestions that there are no significant differences between Alternative 1 – No Action and Alternative 1B, it is important to note that there were major changes between the existing conditions and Alternative 1 – No Action in the 2014 Draft SEIS. The addition of two new Day Boat ACF vessels to Lynn Canal in Alternative 1 – No Action already represents a substantive improvement over the existing conditions. In other words, the 2014

Alternative 1 – No Action already represents a substantial improvement over the travel conditions in this corridor than what currently exists. Given the physical limitations and functional, mission-specific needs of the other vessels elsewhere in the system, DOT&PF and FHWA developed the best “system management” solution possible to try to meet the project’s purpose and need. The fact that it does not provide a substantial improvement over Alternative 1 – No Action is a testament to the improvements already accrued by adding the Day Boat ACFs to Lynn Canal.

By withholding pertinent information about relative needs system-wide, the DSEIS continues to skew the analysis against a viable ferry alternative.

RESPONSE: DOT&PF and FHWA did not withhold pertinent information. As was mentioned previously, Alternative 1B was developed by AMHS and other DOT&PF professionals with years of optimization experience. They developed a system management alternative that makes improvements over and above Alternative 1 – No Action.

DOT&PF identified and evaluated Alternative 1B as a competing NEPA alternative. Alternative 1B addresses the Court’s requirement to evaluate an alternative using existing assets. This results in an increase in AMHS service in Lynn Canal that would not require a reduction in service outside Lynn Canal and would be cheaper to operate than the primary road alternatives. There is nothing about the work presented that “skews the analysis against a viable ferry alternative.”

Appendix CC has been revised for the Final SEIS to provide updates and additional explanation about the development of Alternative 1B and the ability of AMHS to improve surface transportation in Lynn Canal using existing assets.

An analysis of relative demand could result in disclosure of inefficiencies elsewhere in the system; these inefficiencies have the effect of constraining service on Lynn Canal.

RESPONSE: Again, DOT&PF evaluated every vessel in its fleet to try to identify those that could reasonably be relocated or share service within Lynn Canal. It is important to note that AMHS and other DOT&PF professionals regularly evaluate the demand, capacity, and efficiency of the overall system. Schedule changes are made, based on a system analysis of demand and community needs. In particular, because the operation and maintenance of the AMHS system is funded out of the State’s general fund, there is great scrutiny and pressure to optimize the efficiency of the service and minimize the costs. The planning that is undertaken, as well as annual schedule and funding discussions, occurs with much involvement from the public and elected officials. DOT&PF contends that this regular planning process, operational funding scrutiny, and annual scheduling process results in a system that is already highly optimized. Despite this, DOT&PF took a hard look at each of the vessels in the fleet, and identified and disclosed the reasons vessels were or were not reasonable to consider for Lynn Canal service. DOT&PF then identified a reasonable “system management” alternative and fully evaluated it in the Draft SEIS.

For example, the Alaska Marine Highway System (AMHS) recently announced a new route to reach ferry docks south of Petersburg and on Prince of Wales Island. The General

Manager of AMHS stated that “We’re working hard to find efficiencies . . . And I’m finding efficiencies here and there.” Ex. 38 at 2. The new route, however, does not appear to be based upon demand. The last time this route was available “ridership did not justify the service,” leading the private operator of that route to characterize it as “pathetic” and “terrible.” Ex. 21 1-2. Another private operator believes that service using landing craft would satisfy demand on this route while minimizing costs. *Id.* at 2. However, AMHS believes that rerouting a ferry to provide service on this route is necessary—not to satisfy unmet demand, but to “avoid a reimbursement fiscal note,” *id.* at 2, of “[m]ore than \$15 million in federal transportation funds” that must be repaid unless the terminals on the route are used by ferries. Ex. 38 at 1.

Although \$15 million may seem like a large sum to repay, it pales in comparison to the over \$500 million price tag of Alternative 2B. This single additional route is not likely the cause of inadequate service in Lynn Canal, but there may be other similar mismatches between service and demand holding the current ferry system back from performing more efficiently. The Alaska DOT should complete the fare study currently underway, which is designed to analyze and restructure the system-wide fare structure, as described in greater detail in Section VII.D. below, and expand its analysis of demand and service on AMHS to determine whether there may be other inefficiencies, such as redundant or excessive service, in order to determine whether it is possible for the ferry system to be redesigned to meet the project’s objectives while meeting demand system-wide.

RESPONSE: Again, as the AMHS official quoted in the comment suggests, DOT&PF considers system wide efficiencies and improvements through its planning and scheduling processes and optimizes the system accordingly. The purpose and need for this project is not to solve problems elsewhere in the system or set minimum service levels—that is a function performed in the DOT&PF/AMHS planning process.

The AMHS is not run as a for profit enterprise. If it were, it would not be running any ferries because every route requires a subsidy. The AMHS operates as a public transportation system more similar to bus services in major cities. To that extent, a minimum level of service is generally established for most routes in the system (i.e., AMHS, as a public agency, provides service to many communities where demand would not be supported by a private operator). To change these “pathetic” routes or “excessive service” would be inconsistent with adopted plans. Many of these communities rely on AMHS as their only surface transportation despite relatively low levels of demand.

The fare study was released in January 2015. The study looked at changes in fares made since the previous rate study was completed in 2008. It also looked for anomalies on routes of similar length within the AMHS system. It considered the development and implementation of a change in tariff policy with the goal of creating a fair and equitable tariff structure. The study did not analyze demand or service to identify inefficiencies.

Additionally, the DSEIS discounts reassignment of vessels without assessing variations on what AMHS has previously contemplated or attempted. The agencies’ failure to consider novel solutions to existing problems, instead of rehashing solutions that have already been deemed unworkable, falls short of taking a hard look at the issue of reassigning vessels to

improve efficiency system-wide.

RESPONSE: While there are many opinions on ways to improve ferry service in Lynn Canal, AMHS cannot meet the purpose and need for the project solely by making changes to the current operational model. Absent the construction of new ferries, any substantial increase in capacity would require a reduction in service outside of Lynn Canal.

Until a system-wide analysis is completed, the agencies cannot explain to the public why there is no better configuration of existing ferry resources and assets. However, given existing, readily available information, the Skagway Marine Access Commission has improved upon the Alternative 1B presented in the DSEIS. See 2014 Skagway Marine Access Commission Comments. The Commission's Alternative 1B Optimized, incorporated here by reference, demonstrates that existing resources may be used to increase the number of trips and the amount of capacity in Lynn Canal while saving over one million dollars per year. *Id.* Alternative 1B Optimized also provides greater flexibility and travel options to passengers. *Id.* With more information and analysis concerning the entire ferry system, Alaska DOT could potentially improve Alternative 1B even more than Skagway Marine Access Commission already has.

RESPONSE: Again, AMHS regularly reviews the ferry system to determine if there is a way to make better use of existing AMHS assets and meet system needs. The commenter's dissatisfaction with the AMHS system and the perceived improvements that the commenter feels could be made to the plan is not the purpose of the Juneau Access Improvements Project SEIS.

DOT&PF took a hard look at each of the vessels in the fleet and identified and disclosed the reasons vessels were or were not reasonable to consider for Lynn Canal Service (Draft SEIS at Appendix CC). They then identified a reasonable "system management" alternative and fully evaluated it in the Draft SEIS. NEPA does not require that every conceivable alternative be evaluated. The Draft SEIS contains a full range of alternatives, and includes an alternative using existing assets as instructed by the Court.

DOT&PF has investigated the Skagway Marine Access Commission's (SMAC's) Alternative 1B Optimized (see Final SEIS at Appendix II).

The information necessary to develop Alternative 1B would also have the potential to improve Alternatives 4A, 4B, 4C, and 4D.

RESPONSE: Components of the SMAC's proposed Alternative 1B Optimized were reviewed and considered for inclusion in Alternatives 4A through 4D and rejected.

Using only existing information, Skagway Marine Access Commission has also significantly improved upon the alternatives involving an increase in ferry assets in developing its proposed Alternative 5, incorporated here by reference. See 2014 Skagway Marine Access Commission Comments. The Alaska DOT should seriously consider Alternative 5 and should also attempt to improve upon it by obtaining a greater understanding and more thorough analysis of the entire ferry system.

RESPONSE: DOT&PF has investigated SMAC's Alternative 5. The analysis can be found in the Final SEIS at Appendix II.

Because the DSEIS fails to support its assumption that reduced service elsewhere would result in unmet demand, its conclusion that ferries may not be reassigned is arbitrary and "does not represent the 'substantial treatment' required by NEPA's implementing regulations to any non- construction alternatives." *Se. Alaska Conservation Council*, 649 F.3d at 1058 (citing 40 C.F.R. § 1502.14(b)).

RESPONSE: The Draft SEIS does not claim that reduced service elsewhere would "result in unmet demand." Appendix CC of the Draft SEIS indicated that moving certain vessels would jeopardize AMHS's mission and explained the impacts to the mission from moving those vessels.

The AMHS cannot easily relocate vessels from one area to another without serious service consequences. In each of these cases, there are people and businesses that rely on the AMHS service they get, even if some consider the demand "pathetic" or the service level provided "excessive."

The conclusion that ferries may not be reassigned is not arbitrary and is explained explicitly in the Final SEIS at Revised Appendix CC.

## **II. The Comparison of User Benefits in the DSEIS is Skewed Inappropriately in Favor of the Preferred Alternative.**

The user benefits analysis is misleading because it underestimates the amount of time users are likely to wait during peak use, provides a ferry fare for the road alternatives which is lower than the likely actual fares, and uses conflicting assumptions regarding vehicle occupancy. These factors result in a lower user cost for Alternatives 2B and 3 than is warranted, and biases the analysis to favor the road alternatives.

First, the fares for Alternatives 2B and 3 are not tied to the existing AMHS ferry fare structure, but all of the ferry alternatives are assigned current AMHS fares, with the exception of Alternative 1B, which affords a twenty percent discount on existing fares. Ex. \*\*, Alternatives - Ferry Fares Memorandum at 1-2; DSEIS at ES-3. The shuttle fares for the road alternatives are far lower than the least expensive current ferry fares. Alternative 2B sets fares of \$15 for vehicles and \$4.50 for adults to Haines and \$24 and \$8, respectively, to Skagway. Ex. \*\*, Alternatives - Ferry Fares Memorandum at 2. Alternative 3 shows fares of \$20 for vehicles and \$7 for transfer from Sawmill Cove and William Henry Bay, and \$22 and \$7.50, respectively, for the shuttle between Haines and Skagway. *Id.* By comparison, the current actual ferry fares between Haines and Skagway, which are among the least expensive in the ferry system, are \$49 for vehicles and \$31 for adults. Ex. 10.<sup>2</sup>

---

<sup>2</sup> As noted in Lynn Canal Conservation's comments on the DSEIS, the existing fare structure is arbitrary and inefficient, with the cost of fares per mile ranging widely across the system. 2014 Lynn Canal Conservation Comments at 43-44. The current fare structure is outdated and should be replaced, and a long-awaited analysis is presently being conducted. *Id.* Once a proposal to adjust fares is made public, those numbers

There is no analysis contained in the fare memo or the DSEIS to explain why the road alternatives' fares are dramatically cheaper, and the effect of this discrepancy is to skew the analysis of user costs toward the road alternatives. Leaving the cost of ferry delay out of the equation, if the existing Haines/Skagway fares are used to calculate total user costs for fares and vehicle, the costs of the road alternatives skyrocket. A trip to Haines under Alternative 2B would cost twice as much as the current system, and a trip to Skagway would be roughly one- and-a-half times the current system:

<b>Fares and costs as currently depicted in Table A-13 (Appendix FF):</b>						
Alternative	vehicle fare	person fare	persons/vehicle	ferry fare	vehicle cost	total
1- Haines	\$86.00	\$37.00	3.3	\$63.06	\$4.48	\$67.54
1-Skagway	\$111.00	\$50.00	3.3	\$83.64	\$0.00	\$83.64
1B- Haines	\$68.80	\$29.60	3.3	\$50.45	\$4.48	\$54.93
1B- Skagway	\$88.80	\$40.00	3.3	\$66.91	\$0.00	\$66.91
2B - Haines	\$15.00	\$4.50	2.3	\$11.02	\$83.99	\$95.01
2B - Skagway	\$24.00	\$8.00	2.3	\$18.43	\$79.51	\$97.94
3 - Haines	\$20.00	\$7.00	2.3	\$15.70	\$75.13	\$90.83
3 - Skagway	\$22.00	\$7.50	2.3	\$32.76	\$79.61	\$112.37
<b>Fares and costs adjusted to reflect current Haines/Skagway AMHS fares:</b>						
2B - Haines	\$49.00	\$31.00	2.3	\$52.30	\$83.99	\$136.29
2B - Skagway	\$49.00	\$31.00	2.3	\$52.30	\$79.51	\$131.81
3 - Haines	\$49.00	\$31.00	2.3	\$52.30	\$75.13	\$127.43
3 - Skagway	\$49.00	\$31.00	2.3	\$52.30	\$79.61	\$131.91

By using ferry fares that are not tied to the current AMHS fare structure, the agencies have skewed the analysis to make the road alternatives seem less expensive.

RESPONSE: DOT&PF disagrees that the user benefit analysis in the Draft SEIS was biased to favor the road alternatives. The user benefits analysis was based on the anticipated typical summer condition (not a peak use) to be consistent with other analysis in the Draft SEIS. The fares for Alternatives 2B and 3 were calculated using a different methodology than the other alternatives.

The ferry fares for the road alternatives were developed using a methodology that is more

should be used in the Juneau Access Improvements Project's cost calculations.

suitable for shorter, shuttle ferry operations that would be used as part of Alternatives 2B and 3. These fares were based on a flat fee to board the ferry and a cost per mile for the transit. These fares were somewhat lower than the existing AMHS fares due to the efficiencies generated from using ferries designed and operated as Day Boats: Day Boats have the ability to operate with drive through loading and unloading and no reservation system expense.

The fares for the ferry alternatives were based on existing AMHS fares and prorated based on distance.

Per your comment, a memo documenting how the fares were developed has been added as an appendix to Revised Appendix AA, *Traffic Forecast Report* in the Final SEIS.

Second, the ferry delay time for Alternative 2B is unsupported and unrealistic because it “assumes half the ferry travelers would arrive randomly and half would schedule their arrival to match the ferry schedule.” DSEIS at ES-7 n.4, 4-59. Thus, the wait time is assumed to be a quarter of the time between arrivals, determined to be 24 minutes for travel to Haines and 31 minutes to Skagway in the summer. DSEIS, Appendix FF: User Benefit, Life-cycle Cost, and Total Project Life Cost Analyses (2014 App. FF), Attachment A at Table A-13 (April 2014)

RESPONSE: Fehr and Peers, the project traffic consultant, made the assumption that half the people arrive at random times and half arrive just prior to departure. Research shows that people tend to try to minimize their wait time by consulting schedules and arriving at the selected time, particularly if the headways between sailings are frequent and departures are reliable.

However, the consequences for missing a ferry due to tardiness or a full boat are substantial: a traveler would have to wait an extra hour and a half to wait for the next shuttle to Haines and two hours for the next shuttle to Skagway. DSEIS at 4-59. A shuttle might be full because the freight currently brought to Haines via AMHS will be unloaded and trucked to Haines using the shuttle. DSEIS at 4-51; *see also id.* at 4-55 (showing that in 2011, AMHS transported 192 vans from Juneau to Haines and 361 vans in the opposite direction). There could be hazards on the road that might delay one’s planned arrival, such as maintenance to remove avalanche debris, the need to slow down to avoid collisions with wildlife, or heavy precipitation. DSEIS at 4-67, 4-84, 3-39. The shuttles can carry 53 19-foot vehicles, but due to the expected increase in recreational vehicle traffic, DSEIS at 2-15, 4-46, the number of vehicles allowed on the shuttle is likely to be more limited in peak season. On top of these concerns, the shuttle will not accept reservations, DSEIS at 4-59 n.21, increasing the pressure for drivers hoping to arrive at their destination at a particular time, or at least not spending a portion of their day at a ferry terminal far removed from most services, to make sure they budget additional time to ensure they make a particular connection. To expect the average wait time in summer to be merely 24-31 minutes, without a system in place to meter the number of vehicles attempting to make the connection, is unrealistic if the road on the east side of Lynn Canal creates as much demand as the DSEIS asserts. By underestimating the ferry delay time for Alternative 2B while stating that the ferry alternatives will result in ferry delay times of 70-156 minutes, the DSEIS skews the user cost analysis to benefit the road alternative. *See also* Ex. 27 at 12-14.

RESPONSE: The consequences of a missed ferry are disclosed in the SEIS. While it is possible that a traveler could arrive at the terminal only to find the ferry had just departed or to find the ferry full and unable to take another vehicle, such scenarios are anticipated to be rare. Once a pattern was established, it is likely that travelers would self-select to days or times anticipated to be less busy. Most of the time, space would be available. For business travelers with tight timelines and little flexibility, private air carriers are available. Even if such travelers missed their desired ferry, they would likely be able to catch the next one a short time later. Under such a scenario, the travel time (including the delay) would still be much less than the current system.

The analysis is not “skewed to benefit the road alternatives.” The ferry capacities and number of sailings were calculated to provide for the projected summer average daily traffic on the road. Given the number of travelers, it is possible some may miss the first ferry on a busy weekend. However, this would not have a substantial effect on the overall travel demand. During typical summer conditions, Alternative 2B would have sufficient capacity to meet demand. The demand estimate takes into account anticipated freight shipments that occur on the AMHS vessels. The SEIS acknowledges and discloses that during weather events and other extreme events (like rockfall) there would be delays and closures. Travel and waiting times are based on average conditions and are the travel times that would be experienced most of the time. Poor weather, mechanical problems, and other delays can also occur with the ferry options. All alternatives have been treated equally, and are based on average operating conditions anticipated to be experienced in Lynn Canal.

A reservation system is not proposed for Alternatives 2B and 3 because it would increase cost and travel time. To accommodate a reservation system, Alternatives 2B and 3 would require an AMHS staff person to be at Katzehin or William Henry Bay/Sawmill Cove to check in travelers. It would also increase travel time because the ferry would have to load all the reservations to determine how many standby travelers it could accommodate. This would have to be done late in the boarding process to accommodate late arrivals. The number of late arrivals is expected to increase because of the frequency of service. If a traveler misses their planned ferry connection, they would only have to wait a few hours for another sailing. Similarly operated systems in North America (for example, in Washington State and British Columbia) and elsewhere typically do not use reservations on short ferry links like those in Alternative 2B and 3.

Removing the need for a reservation system speeds up the overall travel time by removing the associated check-in process, the shuttle ferries will run frequently, thereby reducing the inconvenience. To test the effect that delay has on demand Fehr & Peers ran a sensitivity test, which tested if the ferry delays were to double for all users (except for the Haines-Skagway shuttle in Alternative 3), then the Alternative 2B and 3 forecasts would decrease by around 10 percent. The actual reduction in total users would be much smaller, since there would only be a few days each year where the number of vehicles for a given sailing exceed the capacity of the ferry.

Third, the DSEIS is misleading because the discussion in the body of the report relies on assumptions contrary to the accompanying User Benefit Analyses contained in Appendix FF, leading to a significantly different user picture for the road alternatives. Appendix FF

analyzes user benefits on a per-user basis and uses data from the National Household Travel Survey to determine how many people would be in a car using the road as well as data from AMHS to determine occupancy of a vehicle using the ferry system in Lynn Canal. 2014 App. FF at 38 (citing Traffic Forecast Report); DSEIS, Appendix AA: Traffic Forecast Report (2014 App. AA) at 19 (May 2014). These figures are 2.3 people per vehicle for travelers using the road, and 3.3 people per vehicle for travelers using the ferry. 2014 App. AA at 19. The body of the DSEIS inexplicably calculates costs based on a family of four. DSEIS at ES-7, 1-18, 1-19, 2-12, 2-33, 4-16, 4-29, 4-61, 4-113, 4-149, 4-150, 4-169. *See also* Ex. 27 at 14. The DSEIS never explains why the assumptions concerning user costs in the body of the DSEIS differ from those prepared by experts in Appendix FF. The effect of these differing assumptions is that while Appendix FF demonstrates that user costs will be higher under Alternatives 2B and 3 (the road alternatives) than Alternatives 1 and 1B (the alternatives using existing AMHS assets), the DSEIS claims that user costs will decrease substantially under Alternatives 2B and 3 relative to Alternatives 1 and 1B. *Compare* 2014 App. FF (App. A, Table A-13) *with* DSEIS at ES-16 (Table ES-1).

These misleading figures for ferry fares, delay times, and vehicle occupancy result in a user cost analysis that is inappropriately weighted to favor Alternative 2B.<sup>3</sup> Because of these unrealistic estimates, the DSEIS does not “foster both informed decision-making and informed public participation,” and must be revised in order to compare alternatives accurately. *Animal Def. Council v. Hodel*, 840 F.2d 1432, 1436 (9th Cir. 1988) (quoting *California v. Block*, 690 F.2d 753, 761 (9th Cir. 1982)).

RESPONSE: Both the Draft SEIS and Appendix FF were based on the same per person and per vehicle costs. A family of four was used in the Draft SEIS to illustrate the relative costs of alternatives because it represents a common family unit. The Final SEIS has been updated to show costs for other travelers.

The Total/Out-of-Pocket User Cost rows of Table ES-1 in the Draft SEIS referred to the Total and Out-of-Pocket costs for a family of four to travel between Juneau and Haines or Skagway. Table ES-1 in the Final SEIS has been updated to clarify this information.

<sup>3</sup> Similarly, the project cost estimates for Alternative 2B are also grossly underestimated, as explained in greater detail in Southeast Alaska Conservation Council’s comments on the DSEIS, and incorporated here by reference. If full costs were included, such as a more realistic cost contingency calculation, AMHS capital and operating costs affected by taking Lynn Canal service out of the system, external costs, and the cost to the Alaska Department of Fish and Game for fish and game management, it would be even more apparent that Alternative 2B suffers from an extremely low benefit-to-cost ratio relative to the other alternatives. *See* 2014 Southeast Alaska Conservation Council Comments.

RESPONSE: The construction contingency for Alternative 2B is appropriate given the level of design development. The segment from Echo Cove to Sweeny Creek was developed through final design in 2006 after the 2006 Record of Decision (ROD), which justifies the 5 percent contingency amount.

---

<sup>3</sup> [see text below response to this comment]

A geotechnical investigation which identified all geologic hazards for Alternative 2B within the segment from Independence Creek to the south bank of the Katzehin River was completed in 2006, and was subsequently updated in 2012 in support of the Draft SEIS. Preliminary geotechnical recommendations were developed to address all identified geologic hazards in response to comments and are reflected in the updated cost estimate in Attachment E of the Update to Appendix D - *Technical Alignment Report* in the Final SEIS. Although additional costs due to geotechnical hazard mitigation have been included in the cost estimate, the final design has not been completed so a 10 percent contingency is appropriate.

From the south bank of the Katzehin River to the proposed Katzehin Ferry Terminal, the contingency amount of 5 percent is appropriate due to the fact that this section of roadway is located on relatively flat terrain and the potential for unforeseen circumstances is low. The greatest portion of the cost for this segment is the Katzehin Bridge. The bridge amounts to over 70 percent of the cost estimate for this segment. Bridge superstructures are well defined with a low potential for unforeseen conditions that would impact cost. The bridge piling size and length estimates are based upon preliminary geotechnical results within the corridor. In addition, there is substantial historic cost data throughout the state that was used to estimate bridge construction costs. This further justifies the 5 percent contingency amount.

The original survey data collection for Alternative 2B was completed in 2002. DOT&PF elected to collect updated survey data for the entire Alternative 2B alignment in 2013 and 2014 to strengthen final design activities. Since 2002, there have been substantial improvements to LiDAR sensors and collection/processing techniques that improve the bare earth surface modeling for design. This updated data collection effort further validated the estimated quantities contained within the construction cost estimate for Alternative 2B. For this reason, the contingency amounts were left unchanged from the Draft SEIS.

The Alaska Department of Fish and Game (ADF&G) confirmed in January 2016 that no additional staff is anticipated to manage additional harvests that may occur as a result of Alternative 2B. Section 4.3.15 of the Final SEIS has been updated to reflect this input from ADF&G.

DOT&PF and FHWA have disclosed the environmental consequences of the proposed alternatives in the Draft and Final SEIS, including the indirect effects described in the comment. EIS documents do not typically present impacts to the environment in financial terms. The “costs” to the physical, natural, and social environment are the main topic of the entire EIS, however, and the EIS discloses all known impacts, both beneficial and adverse, as required by the National Environmental Policy Act. A cost-benefit analysis that attempts to compute a dollar figure for external costs identified above would be highly speculative. Because the indirect impacts have been disclosed quantitatively where possible, and qualitatively elsewhere, FHWA has met its requirements under NEPA. Commitments to manage, mitigate, or avoid environmental damage are part of the project and its costs, as disclosed in the SEIS.

Troubling for several reasons, the DSEIS fails to adequately address safety concerns, including serious dangers posed by avalanches; those safety issues must be analyzed, and the likely increase in acknowledged risk resulting from that analysis will drive up costs

necessary to mitigate those hazards. *See id.* As noted in Southeast Alaska Conservation Council's and Skagway Marine Access Commission's comments, the presently proposed mitigation strategies for avalanches are unrealistic and overstate the extent to which risk is reduced. *Id.*; 2014 Skagway Marine Access Commission Comments.

RESPONSE: The risk reduction factors are consistent with those routinely achieved by modern avalanche programs worldwide. The program proposed for Lynn Canal follows current best practices, with multiple full-time forecasters for daily field presence.

Please refer to the *2017 Update to Appendix J – Snow Avalanche Report*, Section 3.1, Figure 2, for methods used on various highways worldwide, and to the remainder of Section 3, and to Section 6, *Avalanche Mitigation*, where the reduction factors are discussed specifically and in detail, especially Figure 4a, where mitigation factors achieved in other locations are listed.

The discussion in the *2014 Update to Appendix J – Snow Avalanche Report*, Section 6.1 Mitigated AHI Target Calculations, is an analysis of how well the goals were achieved, rather than the calculation of the risk reduction. The risk reduction factors for each path, and for the overall avalanche program are listed in Section 6.3, *Lynn Canal Avalanche Hazard Reduction Methods*, and the raw data and mitigation calculation spreadsheets are available in pdf format online at [www.juneauaccess.alaska.gov](http://www.juneauaccess.alaska.gov).

The level of specificity of the 2014 and 2016 Updates to Appendix J is more than adequate for EIS-level evaluation. The experience of the authors and peer reviewers has been updated with resumes in the Final SEIS.

### **III. The DSEIS's Analysis of Wetlands Impacts is Inadequate.**

#### **A. The Analysis of Wetlands Effects is Incomplete.**

The analysis of effects to wetlands is inadequate and likely understates the effects of the preferred alternative. Alternative 2B presents much greater quantitative and qualitative effects on wetlands than any other alternative. DSEIS, 2014 Update to Appendix O: *Wetlands Technical Report (2014 Update to App. O)*, Attachment A at A-4 (Table 4-3) (Aug. 2014). But the DSEIS contains little analysis of the importance of wetlands in their respective areas, making it difficult to ascertain what local effects may arise. By segmenting the review of wetlands, essential fish habitat, effects to wildlife, and Steller sea lions, the DSEIS misses the connections between these major components. Ultimately, the lack of broader ecosystem and narrower site-specific syntheses makes it difficult for decision makers and the public to ascribe meaning to the loss of wetlands.

RESPONSE: Impacts to wetlands are discussed by subregion of East Lynn Canal in Section 4.2 of *Appendix Z 2014 Update to Appendix O – Wetlands Technical Report* to provide an analysis of wetlands in their respective areas. The subregions include: Berners Bay, Slate Cove to Sherman Point, Sherman Point to Katzehin River, and Katzehin River to Katzehin Ferry Terminal. For each subregion, an evaluation of impacts to functions (e.g. wildlife habitat or fish habitat) and values (e.g. moderately-high value for wildlife habitat function) as well as footprint acreage is provided. Analysis of wetland impacts that overlaps with other natural resources is noted and a reference to those respective reports or chapters in the Draft SEIS is

provided.

The present analysis is an inadequate presentation of the positive and negative effects of Alternative 2B and underestimates its costs, which fails to satisfy the agencies' duty to take a hard look under NEPA at the project itself or to form the basis of the Clean Water Act § 404 permitting analysis.

RESPONSE: The analysis presented in Appendix Z *2014 Update to Appendix O – Wetlands Technical Report* described the potential impacts to wetlands from Alternative 2B and the other project alternatives. Further evaluation of the impacts to wetlands by Alternative 2B was included in the Draft SEIS Appendix Z *Update to Appendix X – Draft Section 404/10 Permit Application and Draft Section 404(b)(1) Analysis*.

The DSEIS's two-page description of effects to wetlands under Alternative 2B utilizes a pattern to introduce the number of acres and type of wetland affected, briefly describe the hydrologic effects, mention the wildlife served by the habitat, and finally imply that the effects will not be great, but this pattern does not describe the effects to the ecosystem as a whole. See DSEIS at 4-73 to 4-75. For example, the section on the west shore of Berners Bay states that palustrine forested wetlands will be affected, and the effects "would include modifying the groundwater recharge functions, the discharge/lateral flow functions, the surface hydrologic control functions, and the sediment retention functions of these wetlands." *Id.* at 4-73 to 4-74. Similar habitat in the surrounding areas "would moderate losses" and "[w]ildlife habitat functions would be reduced, . . . but an abundance of similar habitat is adjacent to the alignment." *Id.* at 4-74. There is no discussion on what types of wildlife are present, whether the adjacent habitat is already at carrying capacity or can support additional animals, or what purposes or functions the affected wetlands served. This description, and the similar descriptions repeated for each stretch along the alignment of Alternative 2B, fails to meaningfully convey the extent and import of the effects to wetlands within the ecosystem.

RESPONSE: Wetland impacts that overlap with other natural resource impacts were noted in the Draft SEIS and references to those respective reports or chapters in the Draft SEIS were provided. Impacts to the broader ecosystem were evaluated based on the primary components that contribute to the ecosystem. This provided a more detailed assessment of the potential impacts that would occur for a higher level approach. Impacts to these primary ecosystem components were evaluated under headings for hydrology and water quality, marine and freshwater habitat and species (including Essential Fish Habitat [EFH]), terrestrial habitat, wildlife, bald eagles, and threatened and endangered species for Alternative 2B in Chapters 4.3.13 through 4.3.17 of the Draft SEIS and in Appendix Z *2014 Update to Appendix N – Essential Fish Habitat Assessment, 2014 Update to Appendix Q – Wildlife Technical Report, and 2014 Update to Appendix O – Wetlands Technical Report*.

When the alignment of Alternative 2B was altered, it increased the amount of essential fish habitat affected at the Katzehin River crossing, but the site-specific effects on this important habitat are not sufficiently addressed. DSEIS, 2014 Update to Appendix N: EFH Assessment (2014 Update to App. N) at 10 (May 2014).

RESPONSE: Per your comment, the site specific effects of the fill on EFH in the Katzehin area are described in Section 4.3.13 of the Final SEIS. The realignments of Alternative 2B since 2004 have reduced EFH impacts associated with highway fill and crossing structures for the Antler, Berners/Lace, and Katzehin rivers. As stated in Section 4.2.2 of the 2014 Update to Appendix N, 25.5 acres of intertidal and subtidal fill is a small portion of the available habitat in Lynn Canal and would have minimal effects on the EFH available in Lynn Canal.

“The Katzehin [River] is one of two rivers in the geographic province with outstanding values for fish, and is a significant contributor to this resources in upper Lynn Canal. The river is very scenic and the pristine condition of the valley is notable with no evidence of past development such as mining trails or timber harvest.” Ex. 41 at 7. The Forest Service has recommended the river for designation under the National Wild and Scenic Rivers Program, describing it as “outstandingly remarkable for its exceptional scenery, active geology, and the productive chum salmon run.” Ex. 47 at E-79. However, it deemed the lowest two miles of the river “unsuitable for such designation because of the transportation corridor proposed by other public agencies between Juneau and Haines and the presence of State-selected lands.” Ex. 48 at A-6.

The Katzehin River provides habitat for coho, chum, and pink salmon, Dolly Varden, eulachon, and Dungeness crab. Ex. 24; Juneau Access Improvements, Supplemental Draft Environmental Impact Statement (2005 SDEIS), Appendix N: Essential Fish Habitat (2005 App. N) at 4-24 (Dec. 2004); 2014 Update to App. N, Attachment A at W-217. The estuarine habitat to be filled under Alternative 2B is especially important for smolt as they transition from freshwater to saltwater, for feeding, and for refuge from predators. Ex. 17 at 6-9; *see also* 2005 App. N, Attachment C at 21 (depicting eulachon habitat needs). The delta of Katzehin River is essential fish habitat for coho and chum salmon and eulachon. 2005 App. N at 5-6. Bridges that infringe on a channel or floodplain can “trap sediment causing the stream to become too shallow and/or warm such that fish will not migrate past the structure,” which is especially problematic for anadromous fish such as coho and chum salmon. Ex. 40 at 4. Studies show that “no truly ‘safe’ threshold road density exists, but rather negative impacts [to fish] begin to accrue and be expressed with incursion of the very first road segment.” *Id.* at 7.

RESPONSE: The cited language for Ex. 40 at 4 is incomplete. Relevant text includes “Undersized culverts and bridges can infringe upon the channel or floodplain and trap sediment...”. The proposed Katzehin River Bridge (2,590 linear feet) would cross over a wide braided plain of the Katzehin River delta. The concern raised that the bridge would infringe on the channel and “trap sediment causing the stream to become too shallow and /or warm” does not apply.

Any reduction in fish habitat at Katzehin River should also be analyzed with respect to the effect on the wildlife depending on those fish for prey.

Significantly, as noted in a study cited by the DSEIS, the Katzehin River supports the closest eulachon spawning site to the Gran Point Steller sea lion haulout, which is designated critical habitat. *See* Womble, Jamie N., et al., Distribution of Steller sea lions *Eumetopias jubatus* in relation to spring-spawning fish in SE Alaska (2005) at 273 (Fig. 1), 274 (Fig. 2) (cited by

DSEIS, 2014 Update to Appendix S: Steller Sea Lion Technical Report (2014 Update to App. S) at 9, 10, 32 (May 2014)). The close proximity to a eulachon spawning run is important because it “decrease[s] foraging costs for sea lions. Use of haulouts close to rich prey resources allows females with dependent pups to conserve travel energy and allocate more resources to pups.” *Id.* at 276. Because Katzeihin River is so close to Gran Point, pups may be able to accompany their mothers, “as the average distance traveled by sea lion pups less than 9 months was  $\leq 15$  km in SE Alaska.” *Id.* at 276-77. Using haulouts close to eulachon spawning sites is also beneficial for males, as it “should allow [them] to arrive at rookeries in good body condition,” making them “likely to successfully defend territories for longer periods of time and mate with more females, thus increasing their reproductive success.” *Id.* at 280. “Based on analysis of Gran Point sea lion haulout data for 2004-2012, abundance is greatest during March through June, with a peak in May,” and eulachon were one of the “three of the most frequently occurring prey species in Steller sea lion scat samples from Gran Point during the springs of 2001 through 2003.” 2014 Update to App. S at 9, 11. The eulachon run at Katzeihin River is already described as small, 2005 App. N, Attachment C at 18, and, “[w]hile formal eulachon stock assessments have not been conducted in Southeast Alaska, anecdotal evidence and trends from other areas suggest long-term declines in run biomass of this species as well.” 2005 App. N, Attachment C at 41.

Additionally, “the peak use of Gran Point by sea lions from October to November may be associated with autumn-spawning salmon migrating through Lynn Canal.” 2014 Update to App. S at 11. Coho and chum salmon, which are both present in the Katzeihin River, spawn at this time. Ex. 13 at 2 (coho); Ex. 12 at 3. The DSEIS shows that Steller sea lions use the delta of the Katzeihin River as a foraging or haulout area. DSEIS, Fig. 3-19.

Because Katzeihin River “contains a productive run of chum salmon which contributes significantly to the commercial fishery in Chilkoot Inlet,” Ex. 47 at E-79, the effects of habitat loss to chum salmon should also include consideration of impacts to the fishery.

RESPONSE: FHWA and DOT&PF have been consulting with the National Marine Fisheries Service (NMFS) regarding the project and potential effects to Steller sea lions since 1994. Information and collaboration from consultation with NMFS is incorporated into the Final SEIS. The Final SEIS addresses impacts to Steller sea lions from Alternative 2B, including effects to prey species from impacts on estuarine habitat in Section 4.3.13. With DOT&PF and FHWA’s identification of Alternative 1 – No Action as the preferred alternative for the JAI Project, there is no longer a need to complete an EFH consultation.

Given the importance of the habitat to be filled at Katzeihin River for fish, the importance of fish for nearby Steller sea lion critical habitat at Gran Point, and the significant contribution of the Katzeihin River to the commercial chum fishery, the DSEIS should analyze the effects of the increased fill at Katzeihin River. However, this analysis is impossible to find.

RESPONSE: The addition of fill at the Katzeihin River proposed since issuance of the 2006 ROD in intertidal and subtidal areas was proposed to address concerns related to scour at the Katzeihin River bridge abutment for Alternative 2B. This would result in placement of additional materials and an overall increase of 0.64 acre of fill within the Katzeihin River intertidal area, 0.55 acre of which would affect EFH. Construction and long-term effects to

EFH from the ferry terminal north of the Katzechin River are evaluated in Sections 5.4.1.2, 5.4.2.3, and 5.4.2.4 of the *2004 Essential Fish Habitat Assessment* and Sections 2.1.1 and 2.1.2 of the *2005 Addendum to Appendix N -Essential Fish Habitat Assessment*. Due to comments, the site-specific effects of the increased fill on EFH in this area are described in Section 4.3.13 of the Final SEIS. The realignments of Alternative 2B since 2004 have reduced overall EFH impacts associated with highway fill and crossing structures for the Antler, Berners/Lace, and Katzechin rivers. As stated in Section 4.2.2 of the 2014 Update to Appendix N, 25.5 acres of intertidal and subtidal fill is a small portion of the available habitat in Lynn Canal and would have minimal effects on the EFH available in Lynn Canal.

The Wetlands Report avoids the analysis by stating that “[i]mpacts to fish habitat as a result of this fill are discussed in the *2014 Update to Appendix N – Essential Fish Habitat Assessment*.” 2014 Update to App. O at 14. Turning to the Essential Fish Habitat Report, the only discussion of Katzechin River is in a section concerning effects to essential fish habitat at Slate Creek, where the “adverse effects on [Essential Fish Habitat] prey resources” are apparently mitigated by the fact that “[e]ulachon also use the Katzechin River for spawning.” 2014 Update to App. N, Attachment A at W-217. Attachment C of Appendix N describes some potential impacts to eulachon generally, such as acknowledging that bridge construction, maintenance, and use has the potential to degrade eulachon spawning habitat, 2005 App. N, Attachment C at ii, but there is no site-specific analysis of the long-term effects at the only estuarine habitat to be filled under current plans for Alternative 2B. The only mitigation proposed for Katzechin River addresses construction, which will be timed to avoid sensitive life stages of fish. 2005 App. N at 5-6; 2014 Update to N, Attachment A at W-225; 2014 Update to App. S at 27.

Furthermore, there are potential cumulative impacts on the Katzechin River and nearby eulachon which have not been explored. Sanitary wastewater will be discharged at the nearby Katzechin ferry terminal. 2014 Update to App. N, Addendum at W-217.

RESPONSE: Appendix Z *2014 Update to Appendix N – Essential Fish Habitat Assessment* includes an analysis of effects to fish habitat loss and spawning from placement of fill in estuarine waters. As noted above, the site-specific effects of the increased fill on EFH in this area are updated and described in Section 4.3.13 of the Final SEIS. Mitigation for placement of fill in EFH includes construction timing restrictions to protect sensitive life stages of fish. Additional mitigation, if required, will be developed in consultation with NMFS.

Attachment A to Appendix Z *2014 Update to Appendix N – Essential Fish Habitat Assessment* of the Draft SEIS states “Alternative 2B in combination with other reasonable foreseeable projects in the region were evaluated for the potential to impact EFH through changes in water quality. This evaluation considered discharges of sanitary wastewater from marine and ferry terminals as well as marine vessels, leakage of fuels and lubricants from marine vessels, highway stormwater runoff, and catastrophic spills from marine vessels and vehicles using a highway.”

Section 4.3.9.3 of the Final SEIS states that AMHS mainline ferry wastewater discharges in Lynn Canal north of Auke Bay would be eliminated. The ferries that would be used for Alternative 2B would have sanitary waste holding tanks. Sanitary

waste from the ferries would be treated at the existing treatment facilities in Skagway. A sewage treatment facility with a permitted outfall would be installed at the Katzeihin Ferry Terminal to treat sanitary waste from the terminal restrooms. The facility would meet all federal and State water quality requirements. Aeration and ultraviolet light disinfection, similar to the system used at the Auke Bay Ferry Terminal, would be used; therefore, no adverse impacts to water quality would occur. No other reasonably foreseeable actions were identified as potential contributors to a cumulative impact on marine resources in the Katzeihin River area.

“Because their habitat distribution and use of nearshore areas is unclear, it is unknown whether eulachon would be affected by habitat alterations associated with ferry terminal construction activities at the Katzeihin site.” 2005 App. N at 5-14.

By avoiding analysis of the site-specific effects of filling estuarine habitat at Katzeihin River on salmon, eulachon, and the Steller sea lions which depend on them, the DSEIS fails to satisfy Alaska DOT’s and the FHWA’s NEPA obligations to study the project and its effects, and it also fails to provide sufficient information for the U.S. Army Corps of Engineers (the Corps) to determine that there are no unacceptable environmental effects. Because the DSEIS is intended to satisfy all of these agencies’ NEPA obligations for the project and its Clean Water Act § 404 permit, the analysis for the impacts to wetlands caused by the preferred alternative must be rigorous and adequate to compare the effects among alternatives.

RESPONSE: The site-specific effects to fish species from fill in the estuarine habitat at the Katzeihin River for Alternative 2B was presented in Appendix Z *2014 Update to Appendix N – Essential Fish Habitat Assessment* of the Draft SEIS. As noted above, the site specific effects of the increased fill on EFH in this area are also updated and described in Section 4.3.13 of the Final SEIS, as are the effects on prey species and the impacts to Steller sea lions.

The analysis of wetland impacts for all alternatives in Appendix Z *2014 Update to Appendix O – Wetland Technical Report* of the Draft SEIS follows established methods under NEPA. The 2004 *Appendix O Wetlands Technical Report* identifies the individual wetlands potentially impacted by all alternatives, describes their functions, and details the impacts to the functions and values of each wetland. The 2004 document provides the basis for the analysis of all the alternatives and was updated to incorporate additional information in 2005 (*Appendix W – Addendum to Appendix O Wetlands Technical Report*) and 2014 (*Appendix Z 2014 Update to Appendix O – Wetlands Technical Report*). With identification of Alternative 1 – No Action as the preferred alternative, DOT&PF notified the U.S. Army Corps of Engineers (USACE) that it was withdrawing its Section 404/10 Permit Application for the JAI Project.

B. The failure to analyze effects to wetlands equally among alternatives skews the analysis in favor of Alternative 2B.

1. *The two road alternatives are not equally studied.*

Alternative 2B poses greater impacts than the next-damaging alternative, Alternative 3, *see* 2014 Update to App. O at A-4 (Table 4-3), and yet it appears that Alternative 3’s adverse

effects to wetlands have been more thoroughly studied and described. While Alternative 2B was rerouted to avoid some impacts to wetlands, Alternative 3 was not similarly reassessed. This unequal treatment could mislead the public and the decision makers as to the extent of environmental damage caused by the preferred alternative relative to other options.

RESPONSE: The analysis for wetland impacts is sufficiently rigorous and provided an appropriate level of information for all alternatives for a NEPA alternative comparison. The analysis presented in Appendix Z *2014 Update to Appendix O – Wetlands Technical Report* describes the potential impacts to wetlands from all current project alternatives. The wetland mapping refinements that occurred to Alternative 2B after the 2006 ROD were minimal and did not change the order of magnitude of wetlands present. The minor refinements made to the alignment of Alternative 2B during the USACE permitting process were based primarily on other environmental constraints (i.e., bald eagle nests, geotechnical surveys, etc.) and due to the abundance of wetland resources in the region, these changes do not alter the degree of wetland impacts. Small-scale refinements that may result from additional ground surveys of wetlands for Alternative 3 (as completed for the permitting process for Alternative 2B) would not substantially change the practicability or degree of wetland impacts for Alternative 3.

The DSEIS fails to consider adjustments to the non-preferred alternatives which would make the alternatives more practicable.

RESPONSE: As stated above, the SEIS acknowledges that the reason Alternative 2B included some minor re-routings was due to the previous advancement of that alternative through the design and permitting phases of the project. The minor adjustments to other alternatives would not alter the practicability of the alternatives described in the *2014 Update to Appendix X - Draft Section 404/10 Permit Application and Draft Section 404(b)(1) Analysis*.

One of the reasons for not selecting Alternative 3 is due to its effects to Berners Bay. DSEIS, Update to Appendix X: Draft Section 404/10 Permit Application (2014 Update to App. X), Attachment 4 at 15 (Sept. 2014). The importance of protecting Berners Bay and its critical value in the ecosystem is central to this comment letter's signatories. While the agencies have refined the alignment to Alternative 2B to reduce some impacts to wetlands at Berners Bay, DSEIS at 2-16, the remaining effects on this essential habitat still pose a grave threat to the ecosystem, and Alternative 3 presents even greater risks to Berners Bay, largely due to its reliance on a ferry terminal inappropriately proposed to be sited directly in Berners Bay. Alternative 3, in contrast to Alternative 2B, remains "mainly unchanged except for minor shifts to avoid new eagle nests identified in 2012." DSEIS, 2014 Update to Appendix D (2014 Update to App. D): Technical Alignment Report at 23 (May 2014). The failure to reduce impacts caused by the most comparable alternative, while improving the preferred alternative to avoid impacts to the same natural feature, reflects an unwillingness to consider a truly reasonable range of alternatives. The DSEIS reflects no attempt to consider alterations to Alternative 3 which would make it viable, such as the obvious solution of continuing to use Auke Bay instead of building a new ferry terminal in Sawmill Cove, or potentially moving the proposed ferry terminal to a less sensitive site.

RESPONSE: As stated above, adjustments were made to the Alternative 2B alignment after it was selected in the 2006 ROD during the USACE permitting process. The magnitude of the adjustments did not alter the practicability of the alternative, nor would similar adjustments to the other alternatives affect their practicability.

FHWA and DOT&PF have evaluated Alternative 3 because it is a reasonable alternative. As stated in Chapter 5 of the Draft SEIS, and maintained in the Final SEIS, DOT&PF would investigate ways to further reduce impacts to wetlands and intertidal/subtidal areas during final engineering design of a selected build alternative. In Attachment 4 of the *2014 Update to Appendix X - Draft Section 404/10 Permit Application and Draft Section 404(b)(1) Analysis*, provided in Appendix Z of the Draft SEIS, DOT&PF evaluated a modified Alternative 3 (Alternative 3M) that used Auke Bay instead of Sawmill Cove for ferry operations from mid-April to the end of May. Alternative 3M was introduced in the 2008 USACE ROD at the recommendation of EPA to avoid impacts to endangered species and their prey in Berners Bay.

DOT&PF determined that Alternative 3M is not reasonable because the additional length of the marine crossing from Auke Bay to William Henry Bay would reduce flexibility for the State to increase capacity and trip frequency, which would reduce demand and further contribute to the determination of being not reasonable. Based on this evaluation, DOT&PF did not identify Alternative 3M as a reasonable alternative for full evaluation in the Draft SEIS. Potential ferry terminal sites south of Berners Bay for Alternative 3 were determined to not be reasonable during the initial screening process for the Draft SEIS in Section 2.2.

DOT&PF has committed to investigating a facility at Cascade Point if the selected project actions require a ferry terminal in Berners Bay (Draft SEIS, pg. 4-232).

Additionally, the depth of analysis given Berners Bay far exceeds the minimal consideration granted other potentially significant areas. The impacts to Berners Bay are important and their analysis is essential to the discussion, but the analysis of effects to other wetlands should just as rigorous as that for Berners Bay. Alternative 2B affects nearly three times the amount of palustrine forested wetlands affected by Alternative 3, which are described as having high replacement costs; four times the amount of rocky shore beaches; and 3.2 acres of estuarine unconsolidated bottom where Alternative 3 affects no estuarine unconsolidated bottom habitat. 2014 Update to App. O at A-4 (Table 4-3). The effects to the latter two categories comprise modification of 32.1 acres of fish habitat and 7.19 acres of wildlife habitat. *Id.* at A-7 (Table 4- 4). Even if not as many acres at Berners Bay are affected under Alternative 2B as under Alternative 3, that is no excuse for failure to adequately assess the other remaining effects and the values and function of habitat lost. Without rigorous analysis of the effects to all wetlands, the agencies have not fulfilled their duty to take a hard look at environmental effects and cannot determine the degree to which each alternative will result in environmental damage.

RESPONSE: After Alternative 2B was identified as the preferred alternative in the 2006 ROD, additional engineering design and field investigations occurred on Alternative 2B as required by the USACE Section 404 permit process. Because that additional analysis is available, it has been incorporated into the Draft SEIS. Additionally, field delineation of

the Berners Bay wetlands was conducted in 2011 as part of the USACE Section 404/10 permit process for the Glacier Highway Extension project. This provided more refined boundary information for the wetlands in the Berners Bay area but did not affect the functions and values assessed for the wetlands. Functions and values of wetlands across all alternatives, in consideration of their entire footprint and not just at Berners Bay, are assessed in Appendix Z *2014 Update to Appendix O – Wetland Technical Report* of the Draft SEIS.

2. *The effects of transportation-related pollution on wetlands are excluded from analysis.*

The cars traveling on a road proposed under Alternative 2B or Alternative 3 will pose pollution hazards that have not been reviewed in the DSEIS. Mercury and polycyclic aromatic hydrocarbons are known to be present in tailpipe emissions, and both “tailpipe emissions and brake wear debris have been reported to be sources” of copper. Ex. 26 at 8719; Ex. 16 at 1 (noting that “vehicles are becoming the largest source of” polycyclic aromatic hydrocarbons). These pollutants can run off to nearby wetlands and streams and affect the habitat and wildlife present. Yet the DSEIS dismisses any water quality concerns because studies in Anchorage “showed dissolved concentrations of calcium, chromium, magnesium, and zinc to be below the [Alaska Water Quality Standards].” DSEIS at 4-70. “Only dissolved concentrations of copper and lead were noted to be above their [Alaska Water Quality Standards],” and “[p]olynuclear aromatic hydrocarbons were at concentrations below the EPA water quality criteria.” DSEIS at 4-70; *see also id.* at 4-121, 4-172. These assertions do not constitute environmental review of the project’s effects; rather, they are aimed at environmental compliance. True environmental review requires consideration of the effects of a project and an assessment of scientific knowledge concerning those effects.

Polycyclic and polynuclear aromatic hydrocarbons are dangerous pollutants for fish. “The immediate and delayed effects of embryonic exposure to *low levels* of polynuclear aromatic hydrocarbons (PAHs) have been shown to reduce survival to maturity by 50% in exposed pink salmon populations.” Ex. 23 at 351, Abstract (emphasis added). “Sublethal effects [to fish] caused by embryonic PAH exposures include edema of the yolk sac and pericardium, hemorrhaging, disruption of cardiac function, binding to the aryl hydrocarbon receptor (AhR) and CYP1A induction, mutations and heritable changes in progeny, craniofacial and spinal deformities, neuronal cell death, anemia, reduced growth, and impaired swimming.” Ex. 15 at 60.

The fact that Anchorage has exceeded water standards for dissolved copper does not address potential impacts in Lynn Canal. “A large body of scientific literature has shown that fish behaviors can be disrupted at concentrations of [dissolved copper] that are *at or slightly above ambient concentrations* (i.e., background). Ex. 32 at ix. “[Dissolved copper] is a neurotoxicant that directly damages the sensory capabilities of salmonids at low concentrations. These effects can manifest over a period of minutes to hours and can persist for weeks.” *Id.* This pollutant “has the potential to limit the productivity and intrinsic growth potential of wild salmon populations by reducing the survival and lifetime reproductive success of individual salmonids.” *Id.* at x.

Finally, the addition of mercury to an environment dominated by wetlands is of particular concern because wetlands readily convert inorganic mercury to organic methylmercury, meaning that mercury emitted from vehicles on the road is more likely to bioaccumulate. *See Ex. 57 at 2.* Methylmercury’s “primary [human] health effect . . . is impaired neurological development,” including “[i]mpacts on cognitive thinking, memoray, attention, language, and fine motor and visual spatial skills . . . .” *Ex. 44 at 1.*

The DSEIS fails to examine the potential effects of vehicle pollution on the environment, thereby ignoring an important aspect of the road alternatives. A full environmental review requires consideration not only of compliance with water quality standards, but also of effects that may occur at concentrations lower than existing standards. Recent scientific studies show that even low levels of polycyclic and polynuclear aromatic hydrocarbons and copper are dangerous for fish, including salmon and herring, and low levels of mercury may pose greater risks when added to an environment predisposed to foster methylation.

RESPONSE: The Draft SEIS examined the potential effects of vehicle pollution on the environment in sections related to air quality, water quality, habitat, and wildlife. Specific to water quality, the Draft SEIS evaluated the potential effects of vehicles traveling on the East and West Lynn Canal highways in Sections 4.3.9 (Alternative 2B) and 4.4.9 (Alternative 3). The evaluation included consideration of pollutants in stormwater runoff and associated water quality of receiving waters. DOT&PF and FHWA have reviewed your comments and reference documents and maintain that the mitigation measures described in Chapter 5 of the Draft and Final SEIS provide reasonable and adequate protection of terrestrial and aquatic systems.

C. The Proposed Mitigation is Inadequately Described.

The mitigation for effects to wetlands as currently described is inadequate and does not accurately portray the potential costs of compensatory mitigation. The FHWA and Alaska DOT intend to provide compensatory mitigation for the effects which are supposedly unavoidable.

However, beyond one small project at Yankee Cove, there are no details or proposals for compensatory mitigation. The road proposed to be built under Alternative 2B is in a relatively pristine area where there may not be many opportunities to restore or replace habitat similar in function to the type destroyed by the road. “Choice in mitigation location should be designed to match or mimic the impacted wetland watershed position in order to maintain watershed-level hydrologic functions.” *Ex. 25 at 27.* Furthermore, mitigation is not an immediate fix; for example, bogs and fens are made up of organic soils that can “take hundreds to thousands of years to develop, and can be among the most difficult type of wetland to restore or create.” *Id.* at 21. The DSEIS provides no analysis or acknowledgment of the lag in time between destruction of wetlands and creation of mitigating wetlands.

The only project mentioned, Yankee Cove, lacks any discussion of what type of habitat is

created and which wetlands it supposedly replaces. At the most basic level, EPA advised FHWA to present the information about the mitigation project in terms of acres, not dollars, and to propose a mitigation plan for the enhancement project as required by 33 C.F.R. § 332.4(c) and 40 C.F.R. § 230.94(c). DSEIS Ch. 7, Sec. 7.8, Environmental Protection Agency (EPA) Comments on Preliminary DSEIS (Feb. 21, 2014) (the EPA Preliminary Comments). The DSEIS still does not identify the acreage of the Yankee Cove project. Further, the Corps questioned whether a ratio of 1:1 would be appropriate for the project. *Id.* Ch. 7, Sec. 7.8, U.S. Army Corps of Engineers (Corps) Comments on Preliminary DSEIS (Feb. 21 2014) (the Corps Preliminary Comments) at 3. Scientists have recommended the use of debit to credit ratios as high as 12:1 for wetlands in Southeast Alaska. *See Ex. 25* at 30. The debit to credit ratio depends on the type of habitat lost and the type of habitat preserved, enhanced, restored, or established. *Id.* at 23. Thus, it is critical to assess the affected wetlands as well as the mitigation site and success of the mitigation in order to determine the degree of compensation for the loss incurred. *Id.* at 17-18. The DSEIS accomplishes neither, making it impossible to assign an appropriate debit to credit ratio.

RESPONSE: With identification of Alternative 1 – No Action as the preferred alternative, DOT&PF notified USACE that it was withdrawing its Section 404/10 Permit Application for the JAI Project. Mitigation costs for all reasonable alternatives were provided in the Appendix Z 2014 Update to Appendix D - Technical Alignment Report. Had the Record of Decision selected an alternative requiring a USACE 404/10 permit, calculations of credits from potential permittee-responsible mitigation projects, as well as the amount of credits to be purchased from an In-Lieu Fee provider would have been detailed in the Compensatory Mitigation Plan approved by the USACE.

First, as discussed above, the impact site assessment is inadequate. The DSEIS assigns replacement values to different types of wetlands but does not explain how these values are calculated. *See* 2014 Update to App. O, Attachment A at A-9 to A-11. Palustrine forested wetlands, by far the most common wetlands in the project area, are assigned a high replacement cost, *id.* at 14, but the rarer estuarine areas are undervalued and should have a higher replacement cost due to their importance for fish habitat. *See id.*, Attachment A at A-11. An assessment of wetlands in the Juneau watershed revealed that “tidal salt marshes (estuarine wetlands) and riverine wetlands (riparian areas and their stream channels) are the least abundant and most heavily impacted type of wetland and forested/scrub wetlands are the most abundant, showing the least impact.” *Ex. 25* at 6. Although restoration of forested wetlands is relatively difficult, *id.* at 21, researchers determined that estuarine wetlands and riverine wetlands complexes are higher priority wetlands due to their lesser abundance. *Id.* at 19. This prioritization is important to assess “if cumulatively we are maintaining or improving the aquatic resources within the watershed” according to the Corps’s “no net loss” wetlands policy. *Id.* at 22. “Prioritization is part of the guidance on how to mitigate for loss,” *id.* at 23, and thus the DSEIS must start with an adequate assessment of the site to be affected.

RESPONSE: Wetland functions and values were evaluated and detailed for each wetland in Appendix Z 2014 Update to Appendix O – Wetlands Technical Report of the Draft SEIS. Attachment 3 of Appendix Z 2014 Update to Appendix X Draft Section 404/10 Permit

*Application and Draft Section 404(b)(1) Analysis* in the Draft SEIS summarizes the wetland and waterbody rating system used. Although the rating system developed is applicable to all wetlands across all alternatives, Attachment 3 focuses on the ratings specific to Alternative 2B as part of the Draft 404/10 Permit Application. To rate wetlands and waterbodies for the purpose of determining appropriate compensatory mitigation ratios that comply with current regulations, a qualitative assessment was performed to classify wetlands and waterbodies into the following four categories: Category I, II, III, and IV. Category I wetlands and waterbodies are generally less common and high functioning. Category IV wetlands and waterbodies are more common with limited or degraded functions. Impacts of Alternative 2B would be limited to Category II and III wetland and waterbodies.

Second, there is insufficient information concerning the mitigation site and the degree of the project's success. Because the compensatory mitigation is in the form of an in lieu fee project that is not yet "fully functional," DSEIS at 5-11, the Corps "must require sufficient compensation to account for the risk and uncertainty associated with" the project. 33 C.F.R. § 332.3(f)(3). Additionally, after the project was constructed, breakwaters were added to the area to protect the marine facility at Yankee Cove primarily used to transport workers to Kensington Mine. Ex. 33; Ex. 22; Ex. 29; Ex. 19 at 2; DSEIS at 3-11. Construction of "breakwaters . . . may affect marine habitat function for herring by inhibiting migration and disrupting movement, blocking or altering access to nursery areas, modifying food production and feeding; altering or covering shallow vegetated and beach habitats used for spawning, attracting predators and changing physiochemical properties." Ex. 34 at 25. "The construction of the Sitka Harbor breakwaters, for example, decreased water circulation and increased silt deposition, which may have reduced biomass of herring spawn inside the harbor." *Id.* Thus, it is possible that the breakwaters installed after the enhancement project was constructed may reduce the project's effectiveness. The DSEIS fails to provide the information necessary to determine the relative success of the Yankee Cove project, and the "final" report assessing the project notes that "processes of reef maturation can take a decade or more," and "recommend[ed] continued monitoring at annual intervals." Eckert, Ginny, et al., Final Report to Alaska Department of Transportation and Public Facilities: Lynn Canal Marine Habitat Enhancement (2010) at 21 (cited in DSEIS at 5-11). As the U.S. Governmental Accountability Office recommended, to achieve the "national goal of no net loss of wetlands" the Corps should set clear expectations for continued oversight of this mitigation project, "including establishing goals for the number of monitoring reports that should be reviewed and the number of compliance inspections that should be conducted." Ex. 49 at 27.

Even if the mitigation plan were approved pursuant to 33 C.F.R. § 332.4(c) and given a generous ratio of 1:1, the artificial reefs placed at Yankee Cove cover at most a couple acres, meaning almost all of the 61 acres of wetlands affected have yet to be mitigated. If even two acres of wetlands lost were mitigated by the Yankee Cove project, the Alaska DOT still has a long way to go; and if all of its mitigation projects are funded at the same rate per acre, it would result in a total mitigation cost of almost \$10 million, not the \$1.3 million it currently expects to pay. *See* 2014 Update to App. X, Attachment 3 at 9 (explaining that "DOT&PF has paid \$324,000 (2006 dollars) as mitigation for . . . two artificial reefs at Yankee Cove"). Again, the estimate of \$10 million assumes a generous debit to credit ratio of 1:1, which even the draft 404 Permit application concedes is not

realistic. See 2014 Update to App. X, Attachment 3 at 11 (Table 6) (proposing ratios of 2:1 and 1.5:1).

RESPONSE: With identification of Alternative 1 – No Action as the preferred alternative, DOT&PF notified USACE that it was withdrawing its Section 404/10 Permit Application for the JAI Project. Had the Record of Decision selected an alternative requiring a USACE 404/10 permit, DOT&PF would have coordinated with the USACE to develop a Compensatory Mitigation Plan that would have outlined the twelve elements required by the Final Rule for permittee-responsible mitigation projects as part of the Section 404/10 permitting process including an evaluation of the Yankee Cove artificial reef site and identification of additional mitigation required to offset impacts to EFH.

Additionally, the wildlife underpasses designed to provide passage for bears, 2014 Update to App. O at 17, do not mitigate effects to wetlands because they serve terrestrial wildlife, not aquatic wildlife. See the EPA Preliminary Comments; the Corps Preliminary Comments. By failing to address EPA's and the Corps's comments regarding identification of these underpasses as wetlands mitigation, the DSEIS misleads the public.

RESPONSE: Section 5.0 of Appendix Z *2014 Update to Appendix O – Wetlands Technical Report* in the Draft SEIS states that the underpasses are out-of-kind mitigation to offset losses to a portion of the terrestrial wildlife habitat impacted by Alternative 2B. The remaining palustrine and estuarine wetlands (0.2 acre) would be mitigated through In-Lieu Fee compensation based on market value of mitigation costs.

In sum, the Alaska DOT's mitigation plan is incomplete and does not form a sufficient basis for the Section 404 analysis to be performed by the Corps and EPA. Additionally, the plan underestimates the costs of mitigation necessary to offset the loss of 61 acres proposed under Alternative 2B. These costs should be updated and included to better inform the public and decision makers for purposes of NEPA review of the project as well as the Section 404 analysis.

RESPONSE: Mitigation costs for all reasonable alternatives were provided in the Appendix Z *2017 Update to Appendix D - Technical Alignment Report*, which includes cost updates prepared as part of the Final SEIS.

D. The DSEIS's Analysis of Traffic Forecast and Demand is Flawed and Fails to Discuss Logistical Obstacles Presented by Alternative 2B, and the Information Provided for the Section 404 Permit Application and the Least Environmentally Damaging Practicable Alternative Analysis is Incomplete.

The information provided in the DSEIS and in Alaska DOT's draft application for a Clean Water Act § 404 permit (404 permit) fails to satisfy the agencies' NEPA obligations and improperly restricts the analysis of the least environmentally damaging practicable alternative. Much of the analysis rests on an unreliable calculation of the traffic to be generated under Alternative 2B and the information provided concerning practicability of alternatives varies by alternative. These distortions are inadequate to serve as the basis for

NEPA review and the determination of the least environmentally damaging practicable alternative.

RESPONSE: FHWA has met its requirements under NEPA by evaluating a range of alternatives in accordance with Council on Environmental Quality (CEQ) guidance (40 Code of Federal Regulations [CFR] 1500) and FHWA regulations (23 CFR 771.130).

An evaluation of practicability of the alternatives is required pursuant to USACE guidelines at 40 CFR 230.10(a). A practicable alternative “is available and capable of being done after taking into consideration cost, existing technology, and logistics...” For the JAI Project Draft Section 404(b)(1) Analysis Update presented in Attachment 4 of the *2014 Update to Appendix X - Draft Section 404/10 Permit Application and Draft Section 404(b)(1) Analysis*, provided in Appendix Z of the Draft SEIS, the criteria used to evaluate practicability include project purpose, capital and operating costs, travel time, daily traffic, travel demand accommodated, wetland impacts, and EFH impacts. Through a Memorandum of Agreement, the DOT&PF would develop a Section 404(b)(1) Analysis and present it with the Draft Section 404/10 Permit Application for information purposes only. The USACE would perform its own independent analysis. With identification of Alternative 1 – No Action as the preferred alternative in the Final SEIS, DOT&PF notified USACE that it was withdrawing its Section 404/10 Permit Application for the JAI Project.

As stated in the Draft SEIS, the Alternative 2B design has been modified to avoid all but 0.2 acres of estuarine emergent wetland fill at the Katzehin River. The alignment from Echo Cove to Cascade Point now incorporates the existing road to minimize wetland impacts. The alignment from Cascade Point to Point Sherman has been revised to avoid all lacustrine emergent wetlands. The crossing of the Antler and Lace rivers have been adjusted to avoid documented eulachon spawning habitat and to provide greater separation from estuarine wetlands. In addition to the bridge extensions to provide for wildlife movements along waterbodies, two wildlife underpass bridges have been added over identified high use bear trails. Other actions to minimize adverse impacts would be evaluated further during permitting and final design.

There is no question that Alternative 2B is the most environmentally damaging alternative proposed. It is apparent from the beginning of the DSEIS: Alternative 2B will result in the loss of 412 acres of old growth forest, 61 acres of wetlands, 32 acres of intertidal and subtidal areas, and 37 acres of essential fish habitat, and will affect 136 eagle nests. DSEIS at ES-17 (Table ES- 1). The no-build alternatives will have none of these natural resource impacts, and the ferry alternatives 4A through 4D will encounter a small fraction of these impacts. *Id.* Even the other major road construction alternative, Alternative 3, does not come close to inflicting the amount of damage on the environment, affecting 100 fewer acres of old growth forest habitat, less than half as many acres of wetlands, roughly one-third of the number of acres of intertidal/subtidal areas and essential fish habitat, and half as many eagle nests. *Id.*

The only way the Alaska DOT may receive a permit for the most damaging alternative is to prove that none of the other alternatives is practicable. Practicability is defined by

“taking into consideration cost, existing technology, and logistics in light of overall project purposes.” 40 C.F.R. § 230.3(q). Given the total project life cost of Alternative 2B is similar to Alternative 3 and greater than Alternative 1B, 4C, and 4D, and the net present value relative to the no action alternative for Alternative 2B is much less than Alternatives 4A and 4B, cost is not a major limiting factor. DSEIS at ES-16 (Table ES-1).<sup>4</sup> The existing technology is the same for all alternatives, as they all include some combination of roads (whether already built or yet to be constructed) and ferries. Thus, it comes down to the issue of logistics in light of the project’s purpose and need.

The Alaska DOT bases its logistical assessment of all of the alternatives on the relative ability of each alternative to meet demand, but the estimate of the supposed demand in Lynn Canal is not reliable. See 2014 Update to App. X, Attachment 4 at 13, 15. Additionally, the assessment does not include any logistical issues afflicting Alternative 2B, such as the possibility “that a shuttle is taken out of service due to breakdown, staff problems, or funding shortfalls”; hurdles facing private companies expected to accommodate foot passengers; or the challenge of having ferry terminals “over 30 miles from existing ferry terminals and all of the support services that complement them.” See *id.* at 14 (discussing logistical problems expected to arise under Alternative 3). The information provided is misleading and incomplete for purposes of NEPA review, and a fuller picture of the facts is necessary in order to make the determination of which alternative is the least environmentally damaging and practicable.

RESPONSE: The commenter is commenting on a Draft 404(b)(1) analysis. This information is provided to USACE for information purposes and not used to determine the State or FHWA’s preferred alternative. The USACE would have performed its own independent 404(b)(1) analysis, if DOT&PF had continued the permit application process.

The unconstrained traffic model is the measure of demand in the corridor. It represents the number of trips desired to be made by the traveling public. In other words, it is the demand. Only by evaluating alternatives against this measure can FHWA determine if they are providing capacity to meet demand. Comparing alternatives to the unconstrained travel demand not only identifies how well the alternatives meet demand, but it also identifies the number of trips not occurring due to operational and logistical constraints. This would be important to meeting DOT&PF and FHWA’s goal of “providing fast, safe, efficient, and convenient transportation at the lowest cost (49 USC §101)”.

Under CEQ guidance, DOT&PF and FHWA are afforded substantial deference over the elements of purpose and need. Evaluating the alternatives in light of the project purpose can only occur through identification of both the travel demand accommodated and the travel demand not accommodated (unmet demand).

Logistical considerations were evaluated in the *2014 Update to Appendix X - Draft*

---

<sup>4</sup> As noted by the Corps, the purposes of reducing state and user costs are not relevant to the 404 permit determination because including cost components “would narrowly restrict the Clean Water Act (CWA), Section 404 alternatives analysis to just one alternative,” so only total project costs should be considered in this analysis. Corps Preliminary Comments at 2.

*Section 404/10 Permit Application and Draft Section 404(b)(1) Analysis.* If a build alternative had been chosen as the preferred alternative, the Draft 404(b)(a) analysis would have been updated to include additional logistical considerations such as:

- Out of service ferries: While Alternative 2B and Alternative 3 use three ferries in the summer and two in the winter, with Alternative 2B, even if two of the three ferries are not available, access can still be provided to both Haines and Skagway. However, Alternative 3 is designed to use a minimum of two ferries. If only one ferry is available, the system cannot operate as a single ferry. Alternative 3 could not simultaneously provide service between William Henry Bay and Sawmill Cove and between Haines and Skagway (40 miles to the north). To provide daily service, the West Lynn Canal Road would have to be bypassed in favor of marine service.
- Foot passengers: Sections 4.3.7.5 and 4.4.7.5 of the Draft SEIS discussed accommodating foot passengers.
- Homeports: Alternative 3 would have two remote ferry terminals. Shuttle ferries would be homeported at Sawmill Cove, including fueling and all routine service. With Alternative 2B, shuttle ferries would be homeported in Haines and Skagway.

1. *The traffic levels and demand forecast are unreliable and rest on flawed grounds.*

The draft analysis provided for the 404 permit and the DSEIS focus on traffic levels and demand, and the purpose of the project is “to provide improved surface transportation to and from Juneau within the Lynn Canal corridor” which will, among other things, “[p]rovide the capacity to meet transportation demand in the corridor.” DSEIS at 1-10. To the extent the State’s asserted need to “[p]rovide the capacity to meet transportation demand” is relevant to the 404 permit analysis, the determination of the demand in the corridor and what each alternative is likely to achieve is of paramount importance. However, the assumptions underlying the current determination of demand have significant flaws, making the assessment of demand unreliable. Despite the acknowledged “complexity and uncertainty associated with predicting traffic in Lynn Canal,” 2014 App. AA at 7, the DSEIS forges ahead to make this estimate the centerpiece of its analysis.

As noted in Lynn Canal Conservation’s comments on the DSEIS (2014 Lynn Canal Conservation Comments), and incorporated here by reference, the assumption that there is large unmet travel demand in Lynn Canal is faulty. *See* 2014 Lynn Canal Conservation Comments at 5-12. The history of the ferry system shows that the increase in the opportunity to travel in Lynn Canal has not been met by an increase in travel; rather, the resulting travel has actually decreased as the opportunity to travel increased. *Id.* at 6 (comparing data for 1988 and 1991, high ferry use years, with 2007, which had lower ridership despite more opportunities to travel). Similarly, when the faster *M/V Fairweather* operated in Lynn Canal in 2004-2005, substantially reducing travel time and increasing vehicle capacity, there was little change in overall ridership. *Id.* at 6-7. Finally, a decrease in user costs in the past did not significantly increase ridership. *Id.* at 7. Thus, three major inputs to the choice models for determining demand – opportunity to travel, travel time, and user costs – have previously been adjusted in Lynn Canal without a corresponding growth in use. *See* 2014 App. AA at 6.

RESPONSE: The assumptions underlying the current determination of demand do not have significant flaws. The estimates of demand are reliable and based on current data and accepted modeling practices. A Total Demand Model was developed as a starting point based on empirical data derived from actual travel conditions observed in Alaska and Western Canada from communities with similar geographic characteristics as Juneau. Based on the project team's research, there were no indicators that travel behavior in Juneau (and for the most part Skagway and Haines) would differ substantially from that of other Alaskan and Canadian communities if full highway access were available. While Juneau is geographically isolated, it is not significantly more remote than other communities where data was collected.

The project team made every effort to produce conservative forecasts, and reached the conclusion that Juneau residents would travel in a similar manner to other Alaskan residents. Even today, Juneau residents travel only slightly less on a per household basis than the average Alaskan household, indicating that not much difference exists. Vehicle ownership per capita in Juneau, Haines, and Skagway is also comparable to other Alaska areas.

Next, a travel choice model was used that calculated the probability of travel for a given alternative by comparing travel times, cost, and convenience against the total demand results. This travel choice model was validated against existing travel conditions within Lynn Canal using established statistical modeling procedures and was independently peer reviewed by a professor who specializes in traffic forecasting.

The commenter makes statistically invalid claims about short-term operational changes that have occurred in Lynn Canal over the years. While it is true that AMHS has tried various service changes to refine service, including price changes, schedule changes, fast ferries, etc., these service refinements have never been implemented together in a fully developed alternative.

The commenter has selected data sets that are too small to make statistically valid correlations and suggests that the traffic forecast in Lynn Canal is faulty. However, it is not within accepted modeling practice or statistical analysis to rely on one or two years of data to surmise a statistically valid correlation (or the lack of one).

It is also as invalid to pick individual years to demonstrate a positive correlation in the data. For example, between 1989 and 1991 round trips increased from 240 to 290 and passenger demand increased from 115,742 to 131,865; numerous other hand-picked years could be identified to suggest a different correlation. Frequency of service is not the only factor in people's decision to travel. Other factors include costs, schedule, or economic conditions in the given year cited.

Each of these factors would need to be known to make an accurate assessment. Moreover, the supply in capacity varies from year to year. Because capacity is not consistent, trip planning can be difficult for the traveling public. Conclusions drawn from data over short periods using an inconsistent variable are suspect.

None of the tests replicate the improvements proposed in the SEIS. And none of the

service changes was run long enough to provide a true test. Furthermore, simply adjusting one or two variables in a complex system and only running them for a short time does not equate to a test of the demand that would develop if the alternatives proposed in the SEIS were to be implemented.

Furthermore, the methodology used to predict traffic forecast and demand is also flawed because it is based on the concept of “unconstrained demand,” and previous traffic forecasts have not come close to accurately predicting the traffic volume in advance of other changes to the ferry system. *See* 2014 Lynn Canal Conservation Comments at 7-9. First, the household survey data which factor into the model do not include any cities with a similar geography or population to Juneau. *Id.* at 8-9. The surveys of Juneau residents resulted in dramatically different estimates of travel. *See* Ex. 27 at 4-5. Second, the concept of “unconstrained demand” is misapplied, because the DSEIS uses the term to refer to “the number of vehicles that would travel between Juneau and Haines or Skagway if there were no impediments to travel other than ownership of a vehicle and the cost of fuel for that vehicle.” DSEIS at ES-5; *see also* 2014 Lynn Canal Conservation Comments at 8, 14-15. The way this term is defined is meaningless because it fails to take into account full costs and the impediments to travel that cannot be removed. *See* Ex. 27 at 3. For this road, some impediments may include the danger of avalanches, risk of wildlife collisions, sharp curves, and the need for ferry systems to reach Haines even if a road were built all the way to Skagway. In order to assess an alternative’s practicability, the alternative should be compared against what is actually possible in Lynn Canal, and not on an unachievable, unrealistic goal. Third, as the 2005 Draft Environmental Impact Statement noted, measuring unmet travel demand is “difficult,” “imprecise,” and uncertain. 2005 SDEIS, Appendix C: Traffic Forecast Report (2005 App. C) at 15 (Oct. 2004).

The output generated by the model to determine demand on a particular alternative is based on seven coefficients: five are taken from another travel model, and the other two were added for this project. Ex. 27 at 5-6. The added coefficients appear to double-count some factors by including redundancies such as time effects. *Id.* at 6-8. If just one of these coefficients is removed, the demand for the preferred alternative looks vastly different than that portrayed by the DSEIS, and is much more similar to the no-build alternatives. *Id.* at 7 (Fig. 1). These errors and discrepancies have a significant impact on the reliability of the model; the estimate for travel by Juneau residents under Alternative 2B currently provided in the DSEIS is nearly double what residents actually indicated in a survey. *Id.* at 7.

RESPONSE: As stated in the Traffic Forecast Report, the results from the 2009 National Household Transportation Survey (NHTS) and 2002 Anchorage Household Travel Survey (AHTS) were used to develop trip generation and trip dissipation rates for the total demand model. The NHTS results were filtered to vehicle trips (including personal and commercial travel) from households that had similar geographic characteristics to households in Juneau.

In addition, a Total Demand Model was developed based on empirical data derived from actual travel conditions observed in Alaska and Western Canada from communities with similar geographic characteristics as Juneau. The ‘unconstrained’ reference was to a situation with a full road connection that did not require a ferry connection. Based on the

project team’s research, there were no indicators that travel behavior in Juneau (and for the most part Skagway and Haines) would differ substantially from that of other Alaskan and Canadian communities if full highway access were available. While Juneau is geographically isolated, it is not significantly more remote than other communities where data was collected. The project team made every effort to produce conservative forecasts, and reached the conclusion that Juneau residents would travel in a similar manner to other Alaskan residents. Even today, Juneau residents travel only slightly less on a per household basis than the average Alaskan household, indicating that not much difference exists. Vehicle ownership per capita in Juneau, Haines, and Skagway is also comparable to other Alaska areas.

There were several Total Demand model approaches considered by the study team. Two methods were selected as being most representative of likely conditions along Lynn Canal. Each of these two different models were developed independently and resulted in similar estimates of travel volume along Lynn Canal.

The travel model considers the following factors:

- Total trip time (considered separately for auto travel time and ferry travel time)
- Total trip cost (considered separately for auto operating costs and ferry fares)
- Ferry wait times
- Ferry departure convenience (boat capacity, number of sailings per day, departure/arrival times)
- Convenience/comfort factor related to driving (ability to make a trip without considering a schedule, ability to stop at interim locations for recreation or comfort)

These model factors are not redundant. As part of the modeling, the team performed a correlation analysis to ensure that the variables were adequately independent. The model was then estimated and calibrated to the Lynn Canal conditions. One cannot just remove one or more of the factors of the model and still end up with a valid result. If factors were removed, then the model would have to be re-estimated, which would yield unknown results.

DOT&PF and FHWA acknowledge that developing a traffic forecast for Lynn Canal is complex. Because there is no road linking communities in Lynn Canal, a forecast of surface transportation demand cannot be conducted in a conventional manner. All traffic demand models attempt to predict future demand based on assumptions and data available in the present. To the extent that they are predicting a future, unknown condition, all demand models are “hypothetical.” The modelers of the current effort used quantitative methods to validate the model and estimated demand using more than one methodology to provide greater certainty that the forecast was grounded on real data and based on repeatable, valid methodologies.

Additionally, “the purpose and need for the JAI Project is to provide improved surface transportation to and from Juneau within the Lynn Canal corridor,” DSEIS at 1-10, which all of the action alternatives accomplish. *Id.* at ES-6 (Fig. ES-1), ES-16 (Table ES-1). *See also* 2014 Lynn Canal Conservation Comments at 12-21 (discussing in detail each element of the purpose and need statement and the respective flaws associated with each element). Part of the purpose and need statement is to “[p]rovide the capacity to meet

transportation demand in the corridor.” DSEIS at 1-10. Yet, as described in greater detail in the Southeast Alaska Conservation Council’s comments on the DSEIS and incorporated here by reference, the DSEIS analyzes the alternatives by determining how much each would *increase* demand. See 2014 Southeast Alaska Conservation Council Comments. This interpretation of the purpose and need statement is arbitrary and unreasonably restricts comparison of alternatives.

RESPONSE: The Alternatives are not analyzed by how much each would “increase demand.” The analysis of alternatives requires a determination of the level of demand that would be generated based on the degree to which travel by motor vehicle is constrained by ferry service, compared with unconstrained demand wherein travel is assumed to be possible via a direct link by road. There is an underlying latent demand for travel in the corridor (unconstrained demand) and more or less of that demand will be realized with each alternative, depending on the attributes of that alternative such as the constraints imposed by the ferry link. All alternatives increase demand relative to Alternative 1 – No Action, but none meet the unconstrained demand because all alternatives include a ferry link.

The analysis documenting the needs and the alternative analysis are not arbitrary. The demand for travel in the corridor already exists. All of the reasonable alternatives satisfy the purpose and need to varying degrees, including the marine alternatives. Some alternatives do this better than others. DOT&PF and FHWA want to select and build a transportation solution that maximizes the number of people who will use it, while also considering costs to the State and users and balancing environmental impacts. Those alternatives that come closer to satisfying the overall, unmet demand for travel in the corridor (i.e., that more people will use) are superior in meeting the purpose and need for the project.

Furthermore, the DSEIS’s application of the purpose and need statement with respect to meeting demand reflects an interpretation that is arbitrarily narrow, and appears to work backwards from the preferred alternative to ensure that nothing but Alternative 2B will serve the reinterpreted project purpose and need. By using an unrealistic definition of “unconstrained demand” and failing to provide any objective measures to indicate how much capacity must be increased or how great a reduction in travel time is acceptable, the Alaska DOT has essentially waited until it forecasted a traffic demand number for its preferred alternative and then declared that nothing less will satisfy the purpose and need, thus reversing the course of proper analysis and running afoul of the 404 permitting process. “Obviously, an applicant cannot define a project in order to preclude the existence of any alternative sites and thus make what is practicable appear impracticable. This court in *Hintz* quite properly suggested that the applicant's purpose must be ‘legitimate.’” *Sylvester v. U.S. Army Corps of Engineers*, 882 F.2d 407, 409 (9th Cir. 1989) (citing *Friends of the Earth v. Hintz*, 800 F.2d 822, 833 (9th Cir. 1986)). Additionally, this unreasonably narrow approach to the project’s stated purpose and need runs afoul of NEPA. The project’s purpose should not prevent full consideration of reasonable alternatives based on an arbitrary interpretation of demand.

RESPONSE: DOT&PF and FHWA did not use an unrealistic definition of unconstrained demand, as has been answered elsewhere in this document. The purpose and need

addresses the transportation needs in Lynn Canal. DOT&PF and FHWA data have demonstrated that there is considerably higher demand for travel than is currently met by the existing system. However, due to high costs, slow travel times, limited capacity, and other inconveniences, the system does a poor job at serving corridor demand. These problems are documented in Chapter 1 of the Draft SEIS.

The CEQ directs federal agencies to grant substantial deference to the lead federal agency with expertise in the stated field, in this case the FHWA, in determining the purpose and need for transportation projects.<sup>1</sup> DOT&PF and FHWA have been consistent over the years in proposing a purpose and need that reflects a desire on the transportation agencies of satisfying that demand. Meeting transportation demand is a legitimate purpose for pursuing a transportation project. More generally, the purpose of investment in public transportation infrastructure is to improve transportation opportunities for the largest number of people in the most cost-effective manner.

A quantifiable target for each purpose and need factor is not required by NEPA. DOT&PF and FHWA selected the preferred alternative in the Draft SEIS by balancing each alternative's ability to meet the purpose and need and its effects on the environment, which are described throughout the document and appendices. The Draft SEIS provided information regarding the performance of each alternative relative to Alternative 1 – No Action. The reasoning behind the identification of Alternative 2B as preferred is provided in the Draft SEIS in the Executive Summary and in Chapter 2 under the heading Identification of the Preferred Alternative. With respect to its performance relative to the project's purpose and need stated in Chapter 1, Alternative 2B accommodates the highest demand, provides the greatest capacity, has the shortest travel times, provides the greatest frequency of service, has the lowest cost per vehicle transported, and has the second lowest operations and maintenance costs of any of the build alternatives (see Table ES-1 of the Draft SEIS). The final selection of an alternative will be in the ROD, a separate FHWA decision document to be issued following publication of the Final SEIS.

The Alaska DOT should analyze each alternative's ability to improve surface transportation relative to the no action alternative. Each would increase capacity and shorten travel times, thereby providing greater flexibility and opportunity. DSEIS at ES-16 (Table ES-1). The extent to which each would meet demand is an inexact science given the problems associated with its estimation here, and should be accorded less weight than other factors.

RESPONSE: The Draft SEIS does analyze each alternative's ability to meet the purpose and need and compares each alternative against Alternative 1 – No Action. A summary of this comparison is found in Table ES-1. All the reasonable alternatives satisfy the purpose and need to varying degrees, including the marine alternatives. Some alternatives, however, do this better than others.

---

<sup>1</sup> CEQ. 2003. Letter to the Honorable Norman Y. Mineta from James L. Connaughton regarding purpose and need. Available on the internet at: <https://ceq.doe.gov/docs/ceq-regulations-and-guidance/regs/CEQPurpose2.pdf>

FHWA.02003. Guidance on "Purpose and Need." Available on the internet at <https://www.environment.fhwa.dot.gov/guidebook/Gjoint.asp>

All traffic demand models attempt to predict future demand based on assumptions and data available in the present. To the extent that they are predicting a future, unknown condition, all demand models have uncertainty. The demand model used for this project was developed based on empirical data derived from actual travel conditions observed in Alaska and Western Canada from communities with similar geographic characteristics as Juneau. The modeling was developed by travel modelers at Fehr & Peers. This firm was specifically identified and hired for its expertise in the travel modeling field, and the approach and results were peer reviewed by an independent university professor with expertise in travel modeling and travel behavior prior to the results being accepted for use in the Draft SEIS. No particular weight was given to any element of the purpose and need.

In its identification of a preferred alternative for the Draft SEIS, FHWA examined how each of the alternatives meets each of the elements of the overall purpose and need for the project and what effects each alternative could have on the natural and human environment. Identification of Alternative 2B as the preferred alternative in the Draft SEIS is addressed in Section 2.5 of that document, which indicates that DOT&PF and FHWA considered multiple factors.

2. *Other logistical factors must be considered for Alternative 2B.*

None of the potential logistical problems affecting practicability of Alternative 2B is mentioned in the DSEIS, despite a discussion of these same factors with respect to Alternative 3. *Compare* 2014 Update to App. X, Attachment 4 at 13 *with id.* at 14-15. In summer, three ferries would serve Alternative 2B – one between Katzehin and Haines, one between Katzehin and Skagway, and one between Haines and Skagway. DSEIS at 2-15. During winter, only two shuttles would be available, canceling direct service between Haines and Skagway and thereby increasing the travel time between these two towns. *Id.* Similarly, Alternative 3 uses three ferries in the summer (two between Sawmill Cove and William Henry Bay, and one between Haines and Skagway), and two in the winter (using only one between Sawmill Cove and William Henry Bay). *Id.* at 2-19 to 2-20. The effects of one of those shuttles being out of service seem to be equally severe under either alternative, because in the summer, one of the routes under Alternative 2B would not be served or would be served at the expense of the other two routes if one ferry were not available, and under Alternative 3, the service between Sawmill Cove and William Henry Bay would be cut in half. In the winter, a breakdown in a ferry under Alternative 3 might mean a temporary disruption in service between Haines and Skagway, but for Alternative 2B, under normal operating conditions the service between Haines and Skagway would never be direct at this time of year. However, this logistical concern is discussed only in reference to Alternative 3, *see* 2014 Update to App. X, Attachment 4 at 14, thereby skewing the analysis to favor Alternative 2B.

RESPONSE: The commenter is commenting on a draft 404(b)(1) analysis. This information is provided to USACE and not used to determine the State or FHWA's preferred alternative.

The logistical problems mentioned with respect to Alternative 3 were not discussed in

this analysis because they do not apply to Alternative 2B.

The three-ferry system for Alternative 2B would provide more route flexibility. Even if two of the three ferries were not available, access could still be provided to both Haines and Skagway

Alternative 3 is designed to use a minimum of two ferries. If only one ferry were available, the system could not provide service between William Henry Bay and Sawmill Cove and between Haines and Skagway (40 miles to the north).

As to foot passenger traffic and the logistical problems of serving walk-on passengers, it appears that the Alaska DOT is only selectively concerned as to their plight. In response to public concerns regarding the preferred alternative's effect on walk-on passengers, the DSEIS states that "the purpose of the JAI Project is not specifically to move people wishing to travel without a vehicle, but rather to provide improved surface access to Juneau." DSEIS at 7-9. The analysis in the DSEIS explicitly declines to account for walk-on passengers. *Id.* at 2-10 n.10. As an initial matter, the interpretation of the project's purpose and need to exclude consideration of walk-on passengers is arbitrary. The project's purpose "is to provide improved surface transportation," DSEIS at 1-10, and there is no reason to restrict surface transportation to people using cars.

RESPONSE: The project's purpose did not "exclude consideration of walk-on passengers." The purpose of the project is to provide surface transportation to and from Juneau in the Lynn Canal corridor. Surface transportation is not restricted to people using cars. Walk-on passengers are accounted for in the project's demand estimates and changes to how walk-on passengers would be affected by the project alternatives are disclosed.

Generally, the purpose of investment in public transportation infrastructure is to improve transportation opportunities for the largest number of people in the most cost-effective manner possible. It is not practical or reasonable to expect infrastructure improvements to enhance travel opportunities for all travelers, from all locations, for all travel purposes. Replacing ferry service with a highway would require a change in travel behavior for some travelers, perhaps at some increased expense and inconvenience, while a much larger number of travelers would be able to travel at lower expense and greater convenience.

FHWA and DOT&PF did not exclude consideration of or explicitly decline to account for effects to walk-on passengers in the assessment of impacts in the Draft SEIS. The impacts to walk-on passengers are disclosed in Sections 4.2.7, 4.3.7, 4.4.7, 4.5.7, and 4.6.7 of the Draft SEIS.

The Ground Transportation Services section of Sections 3.1.4.1 and 3.2.4.1 of the *Socioeconomic Technical Report* (Appendix EE of the Draft SEIS) describes how walk-on passengers would travel if a highway were constructed and point-to-point ferry service were discontinued. DOT&PF anticipates the private sector operating a bus/van shuttle service to accommodate walk-on passengers if that demand developed and it was shown to be profitable.

Additionally, the effects of the project on walk-on passengers must be analyzed with respect to all alternatives, and yet the DSEIS only analyzes the effects of Alternative 3 on walk-on passengers. 2014 Update to App. X, Attachment 4 at 14. Similar logistical hurdles, however, may be presented by Alternative 2B which could hinder a private company's ability to serve walk-on passengers, and the DSEIS has not considered these effects. For example, the inconvenience of providing van service on both side of Lynn Canal, including service to the Sawmill Cove terminal 40 miles north of Juneau is discussed with respect to Alternative 3, *id.*, but the distance from Juneau to the Katzechin ferry terminal is much farther than the distance from Juneau to Sawmill Cove, meaning that if a private company had a set number of buses stationed in Juneau, it would be able to make more trips to Sawmill Cove than to Katzechin, allowing greater flexibility and more opportunities to make the trip. The lack of flexibility inherent in the longer trip to Katzechin might result in inconvenience for passengers who might have to take a bus at a certain time to allow some passengers to make the connection to Haines while forcing others to wait until the Skagway shuttle arrives. Towards Juneau, again, some passengers arriving from one community may have to wait until passengers from the other community arrive before their bus departs, and the private carrier may be limited in its ability to provide services to waiting passengers at this remote terminal. These delays for walk-on passengers and the logistical problems of providing private carrier service to and from Katzechin are completely and intentionally ignored, despite similar logistical problems addressed for Alternative 3. *See* 2014 Update to App. X, Attachment 4 at 14-15.<sup>5</sup>

RESPONSE: This comment refers to the draft 404(b)(1) analysis. This information was provided to USACE to support a conclusion that Alternative 3 is not practicable.

Sections 4.3.7.5 and 4.4.7.5 of the Draft SEIS describe impacts to pedestrians and bicyclists for both Alternatives 2B and 3, respectively. These sections discuss the potential for a bus/van service to develop. Alternative 3 presents a logistical problem for foot passengers and bus/van service because of the two remote terminals—a private carrier would need to have one or more vehicles on either side of Lynn Canal or transport its vehicle(s) across Lynn Canal on the shuttle, which would likely add to the cost of the shuttle and increase transit, affecting the operational schedule. The logistical problem for foot passengers under Alternative 2B is limited to the East side of Lynn Canal—a private carrier would only need to transport passengers between the remote terminal at Katzechin and a depot in Juneau because the shuttle ferry would deliver foot passengers to the Haines and Skagway ferry terminals, which are currently accessed by foot passengers.

Per your comment, the Final SEIS has been revised to indicate that depending on the bus/van shuttle times and the frequency of services, some Alternative 2B foot passengers would have less flexibility and opportunity to travel. The Final SEIS has also been clarified to indicate that Alternative 3 foot passengers may also have to rely on shuttle

---

<sup>5</sup> Lynn Canal Conservation and Skagway Marine Access Commission have also provided thorough analyses of the existing use of ferries by walk-on passengers (or foot passengers) and the potential effects on walk-on passengers posed by different alternatives. Their comments are incorporated here by reference. *See* 2014 Lynn Canal Conservation Comments at 1-5; 2014 Skagway Marine Access Commission Comments. The Smart Mobility report demonstrates the flaws in the DSEIS's current analysis with respect to walk-on passengers. Ex. 27 at 10-12.

service for travel on the west side of Lynn Canal.

Finally, “the remote location of the Alternative 3 ferry terminals” is cited as being “logistically challenging for maintenance.” *Id.* at 14. Similarly, Alternative 2B may face logistical problems due to the remoteness of the ferry terminals at Katzehin, Haines, and Skagway. “[C]ertain activities, such as maintenance, fueling, refilling potable water tanks, and emptying sewage holding tanks, have to be done on a daily basis. Currently, in Lynn Canal, Auke Bay is the only terminal where these activities can be performed. To perform these activities in Haines or Skagway, the terminals would need to be upgraded.” DSEIS at 2-8. If one of these terminals were upgraded, it would be more than 30 miles away from the next existing ferry terminal providing these services, i.e., Auke Bay. While this may not be an “insurmountable obstacle,” neither is this logistical factor an “insurmountable obstacle” for Alternative 3, but it was nonetheless raised as “a contributing factor that combined with other factors” in the analysis of the logistics under Alternative 3. 2014 Update to App. X, Attachment 4 at 14.

None of these logistical challenges is discussed for Alternative 2B, but all of these concerns are addressed for Alternative 3. *See id.* at 13-15. With so little difference between the logistical hurdles faced by Alternative 2B and 3, it is disingenuous not to disclose these problems with respect to the preferred alternative. Without disclosure and consideration of the logistical problems that may arise under Alternative 2B, the DSEIS cannot serve as the basis for the Corps’s and EPA’s analysis of the least environmentally damaging, practicable alternative.

RESPONSE: This comment refers to the draft 404(b)(1) analysis. This information was provided to USACE to support a conclusion that Alternative 3 is not practicable and was not used to determine the State or FHWA’s preferred alternative.

Section 2.2.10 of the Draft SEIS acknowledges that certain maintenance activities for the ferries would need to be done on a daily basis, and Auke Bay is the only facility at the present time where those activities can be performed. Alternatives 2B and 3 would need to homeport ferries at Haines and Skagway (Alternative 2B) and Sawmill Cove (Alternative 3) and would require upgrades at those ferry terminals to perform daily maintenance functions. Since the Haines and Skagway terminals are associated with established communities, it would be easier to get fuel and service materials there (similar to Auke Bay) as compared to Sawmill Cove. This adds to the impracticability of Alternative 3, as noted in the draft 404(b)(1) analysis.

#### **IV. The Juneau Access Project Must Comply With the Tongass Land Management Plan’s Provisions for Protecting Old Growth Habitat.**

The DSEIS explains that the Juneau Access road corridor would overlay lands that are designated as old growth land areas (Old Growth Habitat LUD) under the Tongass Land Management Plan (the Forest Plan). The DSEIS erroneously asserts that the project does not have to comply with the Forest Plan’s prescriptions for the Old Growth Habitat LUD. The DSEIS also fails to address the effects of the Juneau Access Project on the Tongass National Forest’s old growth reserve system.

A. The Forest Plan Does Not Exempt the Juneau Access Project From Complying With Old Growth Habitat Requirements.

The Forest Plan establishes management criteria for the Old Growth Habitat LUD that specifically require that the Forest Service conduct an analysis “to determine if other feasible routes avoiding this [Land Use Designation] exist during the project environmental analysis process” before allowing construction of a new road. Forest Plan at 3-61. According to the DSEIS, no such analysis was completed. The DSEIS asserts that the Forest Plan exempts the Juneau Access Project from the management criteria applicable to old growth habitat protections because the project is in a Transportation and Utility Systems “window.” See DSEIS at 3-4. The DSEIS concludes that the old growth “prescriptions that state ‘new road construction is generally inconsistent’ and that [the Forest Service] must perform transportation analysis regarding feasible avoidance routes are applicable only to proposed road development outside the [Transportation and Utility Systems Land Use Designation].” *Id.*

Even if the Juneau Access corridor is in a window, the Forest Service must still comply with the specific requirements of the Old Growth Habitat LUD management prescriptions. See Forest Plan at 1-3 (where there is a conflict between the forest-wide standards and guidelines and the standards and guidelines for a specific Land Use Designation, the specific management prescriptions control). Windows, moreover, apply only where “the applied management direction will not conflict with future designation” of a Transportation and Utility System. See Forest Plan at 4-32. Thus, if an area is to be treated as a window, as the DSEIS contends, it means only that it is no longer an avoidance area and becomes an area “potentially available” for a Transportation and Utility System, provided such use does not conflict with the management direction for the underlying Land Use Designation. *Id.* Given each Land Use Designation in the Forest Plan has a different set of standards and guidelines, the Forest Service must separately determine that a road would not conflict with those area-specific management prescriptions. The limitations on road construction are different in various Land Use Designations. The standards and guidelines for the Old Growth Habitat LUD, which govern the areas at issue here, provide that the Forest Service must determine that no feasible alternatives are available before allowing construction through this Land Use Designation.

RESPONSE: The Forest Plan has been revised since this comment was submitted, and the Transportation and Utility System (TUS) Land Use Designation (LUD) has been eliminated. Instead, the Forest Plan now addresses transportation issues through Transportation Systems Corridors (TSCs). The Forest Plan provides Standards and Guidelines for TSC that take precedence over the Standards and Guidelines for other LUDs, such as the Old Growth Habitat LUD, but only at the time a major transportation project is formally proposed. The TSC is specifically designed to address State projects that appear in adopted transportation plans or that would occur in easements established by law, such as the 4407 easements established under Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) and amended by the Fixing America's Surface Transportation (FAST) Act.

The State of Alaska currently holds an easement interest in each transportation and utility

corridor established by Congress under SAFETEA-LU Section 4407. Once the State of Alaska determines the precise location of a highway facility within a Section 4407 corridor, the U.S. Forest Service (USFS) must issue recordable documentation of the Congressionally established easement. Congress stated its intent that “the Secretary of Agriculture will not withhold or deny the issuance of an easement for a proposed transportation or utility project that otherwise has all necessary construction permits and authorizations from other State and Federal agencies” (Senate Report 114-80, at pages 23-24, July 15, 2015). While the Secretary of Agriculture and USFS may be required to make a finding under the Roadless Rule and may need to complete a NEPA decision for a plan amendment related to adjusting Old Growth Habitat LUD boundaries, these would be internal decisions and would not have a bearing on approval of a road alternative. The State believes the Secretary of Agriculture and USFS do not have authority to determine whether or where highway construction would occur in the Congressionally granted transportation and utility easement.

B. The DSEIS Fails to Disclose the Impacts on the Tongass’s Old Growth Habitat Conservation.

The DSEIS explains that “[l]ands on both sides of Lynn Canal, in the vicinity of the [Juneau Access Improvement] Project, contain substantial but sometimes discontinuous old-growth forest habitat.” DSEIS at 3-62; *see also id.* at 3-4—3-8. It recognizes that designated areas of the forest are preserved as old growth forest habitat in medium or large old growth reserves or as small reserves in Old Growth Habitat LUD. *Id.* at 3-62. The DSEIS acknowledges these areas “are the key components of the forest’s old-growth habitat conservation strategy, which is meant to protect wildlife species as well as the forest itself, with emphasis on the viability of key indicator wildlife species.” *Id.* This system of reserves is “designed to maintain a functional and interconnected old-growth ecosystem” across the Tongass. *Id.* (quoting Forest Plan at D-6). The DSEIS admits that various alternatives would affect this reserve system. *Id.* at 4-79. For example, the DSEIS explains that Alternative 2B, the preferred alternative, “would impact three mapped small old-growth reserves established under the reserve system.” *Id.*

Even assuming the Forest Plan allowed such an action, the DSEIS fails to address the consequences of losing that habitat. The DSEIS’s only assessment of these impacts is an effort to quantify the number of acres of old growth forest that would be lost. The DSEIS, for example, simply states that “[i]f this alternative were selected, the [Forest Service] in consultation with [the Alaska Department of Fish and Game] and [the Fish and Wildlife Service] would adjust boundaries to make the Old-Growth Habitat LUDs meet the requirements of the old growth reserve system established in the [Forest Plan].” *Id.* at 4-80.

The DSEIS, however, fails to provide any assessment of the impacts various alternatives would have on the Tongass’s reserve system. As the Forest Service explained in its comments, “the purpose of the [DSEIS] is to ‘analyze the impact’ of the alternatives on affected resources,” but the DSEIS fails to disclose, analyze and characterize any of the impacts the reserve system. DSEIS Ch.7, Sec. 7.8, Forrest Cole letter to Tim A. Haugh (Feb.24, 2014) at 9. The DSEIS lacks any information that would inform the determination of “whether the affected old-growth reserve components would still meet

the criteria established in Appendix K of the [Forest Plan], and Appendix D of the [Forest Plan environmental impact statement].” *Id.*

RESPONSE: The Draft SEIS addresses the consequences of losing old growth habitat. It is not accurate to state that the only assessment of these impacts is an attempt to quantify the number of acres of old growth forest that would be lost. The effects of the loss of habitat as a result of the project has been principally recorded in sections addressing terrestrial habitat and wildlife, with related information in wetlands and water habitat sections (generally sub-Sections 12-17 under each alternative in Chapter 4), and in associated technical reports. The link between the land management discussion and the terrestrial habitat and wildlife discussions has been strengthened in the Final SEIS, with better cross-references and language more clearly linking the sections.

To clarify the process, if the State and FHWA had selected Alternative 2B as the preferred alternative, the USFS would have been prompted to adjust its Old Growth Habitat LUD boundaries as required in its plan. It is not a DOT&PF or FHWA action. The USFS process for examining whether the boundaries need to be changed was undertaken for Alternative 2B by USFS, ADF&G, and U.S. Fish and Wildlife Service (USFWS) since publication of the Draft SEIS, and results have been incorporated into the Final SEIS. Modifications to small Old Growth Reserve boundaries are recommended; therefore, a Forest Plan amendment and associated USFS NEPA decision would be needed.

SAFETEA-LU did not grant specific rights-of-way or easements or exempt them from environmental requirements.

The DSEIS contends that Section 4407 of the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users, Pub. L. 109-59 (2005) (SAFETEA-LU) overrides several applicable requirements, including those in the Roadless Rule. The DSEIS explains that “[i]f for some reason [the Alaska DOT] could not use all or a portion of this easement or the alignment was shifted outside this easement, [the FHWA] would secure a transportation easement across Tongass National Forest through a federal land appropriation process authorized by 23 [U.S.C. §] 317.” *Id.* at 4-35.

According to the DSEIS, “[t]he State of Alaska believes an analysis under the Roadless Rule (of whether other reasonable and prudent alternatives exist that do not use Inventoried Roadless Areas) is not required for this project because Congress authorized the granting of the SAFETEA-LU 4407 transportation easements.” *Id.* at 4-3. The DSEIS explains that “[t]he Roadless Rule prohibits road construction in inventoried roadless areas, unless road construction is conducted under an exempted circumstance, including when a road is ‘provided for by statute or treaty.’” *Id.* at 3-6 (quoting 36 C.F.R. § 294.12(b)(3)). The DSEIS asserts that Congress granted transportation and utility easements to the State of Alaska for each side of Lynn Canal and “[b]ecause the [Juneau Access] Project easement is provided by statute, an analysis of other ‘reasonable and prudent’ alternatives need not be conducted prior to the [Forest Service’s] issuance of the 4407 easement.” *Id.*

As an initial matter, Section 4407 of SAFETEA-LU references a map of state and federal

easements and rights-of-way in southeast Alaska; it does not unambiguously grant any particular rights-of-way or easements. *See United States v. Union Oil Co.*, 549 F.2d 1271, 1273 n.5 (9th Cir. 1977) (Where the conveyance of federal land is at issue, “nothing passes except what is conveyed in clear language . . .”) (quoting *United States v. Union Pac. R.R. Co.*, 353 U.S. 112, 116 (1957)).

Here, the language in Section 4407 offers no legal descriptions of the purported conveyances (e.g., township, section, and range). After SAFETEA-LU’s enactment, the Forest Service and State of Alaska executed a memorandum of understanding, which memorialized the parties’ interpretation of SAFETEA-LU; the memorandum of understanding directly contradicts the interpretation advanced in the DSEIS. According to the memorandum of understanding, the Forest Service and the State interpret Section 4407 largely as a measure to streamline the process for granting rights-of-way needed by both the State and the Forest Service. The memorandum of understanding specifically recognizes, contrary to the assertions in the DSEIS that the provision does not displace other laws and that the parties can only grant the easements and rights-of-way identified if the conveyance is “consistent with their respective obligations to protect scenic, archaeological, recreation, and fish and wildlife values, resources and habitats on National Forest System lands and State of Alaska lands.” Memorandum of Understanding between U.S. Forest Service and Alaska Department of Natural Resources, FS Agmt. No. 06MU-11100100-151, State of Alaska Agmt. No. ADL 107516, at 1 (Sept. 22, 2006). Indeed, the Alaska U.S. District Court has ruled Section 4407 “does not identify any easement with specificity” and that the memorandum of understanding was negotiated due to the statute’s “vague nature.” *Se. Alaska Conservation Council v. Fed. Highway Admin.*, 1:06-CV-00009 JWS, 2013 WL 5532835, at \*2 (D. Alaska Oct. 3, 2013).

Additionally, the DSEIS’s contrary interpretation focuses entirely on the portion of Section 4407 that reads “notwithstanding any other provision of law.” DSEIS at 3-6 n.3. The DSEIS, however, ignores the fact that “notwithstanding” phrases are not dispositive and courts regularly interpret similar language to be narrower than the potential scope of the phrase. *See United States v. Novak*, 476 F.3d 1041, 1046-47 (9th Cir. 2007) (noting that “notwithstanding any other provision of law” phrases are “not always construed literally” and must be read in context) (citations omitted); *Nw. Forest Res. Council v. Pilchuck Audubon Soc’y*, 97 F.3d 1161, 1167 (9th Cir. 1996) (finding that similar “notwithstanding” language did not preempt National Forest Management Act regulations where nothing in the language indicated an intent to preempt those regulations). Courts consider the language and structure of the statute and the relevant legislative history in interpreting the scope of such phrases. *See, e.g., Nw. Forest Res. Council*, 97 F.3d at 1166-67 (considering language of Rescissions Act); *In re Glacier Bay*, 944 F.2d 577, 582-83 (9th Cir. 1991) (examining structure of provisions of conflicting laws); *Miller v. United Food & Commercial Workers Union*, 708 F.2d 467, 470-71 (9th Cir. 1983) (considering legislative history).

In sum, the DSEIS erroneously suggests that Section 4407 of SAFETEA-LU grants the State specific rights-of-way or easements. SAFETEA-LU does not exempt conveyances from other applicable requirements like the Roadless Rule because Section 4407 affords the Forest Service considerable discretion in approving those conveyances, including

requiring the State to comply with all applicable Federal laws and regulations for all federally funded highway projects.

RESPONSE: Section 4407 does not explicitly “afford” the USFS any discretion in approving the conveyances. It is silent on the matter, except to state that Congress granted the easements within a certain area, and the area includes Inventoried Roadless Areas. The Draft SEIS does not “suggest that Section 4407 of SAFETEA-LU grants the State *specific* rights-of-way or easements” (emphasis added). Rather, SAFETEA-LU and the FAST Act granted general easements defined by a wide corridor on an accompanying map. Because Congress enacted wide areas from which to define the specific easement, the State of Alaska and USFS developed an MOU to specify how the easements would be made specific. Language in the Final SEIS has been reviewed and revised as necessary for clarity on these points.

#### **V. The Roadless Rule Prohibits the Juneau Access Project Absent Specific Findings, Which Have Not Been Made in this Case.**

As a general matter, the Roadless Rule prohibits road construction and reconstruction in inventoried roadless areas of the National Forest System. 36 C.F.R. § 294.12(a) (2001). The DSEIS does not explain why the Juneau Access Project qualifies for an exemption and, as a result, the road construction is impermissible.

The Roadless Rule provides for a specific exemption for Federal Aid Highway projects. Road construction is permissible where the Regional Forester concludes that:

The Secretary of Agriculture determines that a Federal Aid Highway project, authorized pursuant to Title 23 of the United States Code, is in the public interest or is consistent with the purpose for which the land was reserved or acquired and no other reasonable and prudent alternative exists . . . .

*Id.* § 294.12(b)(6). The DSEIS does not disclose that any of the required findings have been examined or even that the information has been disclosed.

RESPONSE: Section 4.1.1 of the Draft SEIS describes the existing conditions and context in which DOT&PF would pursue a final right-of-way for roads under the various alternatives. The SEIS does not report “required findings” because no findings have been made. Any USFS decision or finding would occur in a separate USFS decision document following publication of the Final SEIS.

The Roadless Rule provides a number of exceptions for certain classes of road projects, and each exception has its own prerequisite requirements. The comment refers to the Roadless Rule exception for highway projects where easements are granted under the authority of 23 United States Code (USC) 317. Congress granted to the State of Alaska transportation and utility easements along the east and west sides of Lynn Canal under the authority of SAFETEA-LU Section 4407, as amended. The Roadless Rule exception for rights granted by statute or treaty only requires a determination by the Secretary of Agriculture that the congressional grant exists (36 CFR 294.12(b)(3)). The USFS has been provided information and is independently aware of the existence of Section 4407’s

Congressionally granted highway easements on the east and west sides of Lynn Canal.

## **VI. The DSEIS Fails to Comply with NEPA's Regulatory Requirements Regarding Missing and/or Incomplete Information.**

The DSEIS acknowledges missing information, but it does not comply with NEPA's regulatory requirements governing missing or incomplete information. *See* 40 C.F.R. § 1502.22. Some of this information has never been made available, and other information is outdated due to the lapse in time since the 2006 FEIS was issued. The air quality modeling, for example, is based on a now-defunct alternative with fewer ferries, and the modeling is also inadequate because it fails to incorporate marine vessels at all. In other instances, the information will only be obtained after an alternative is selected. For example, additional studies concerning the risks of geological hazards, presence of amphibian ponds, and adjustments to ferry fares have not yet been completed and there is no indication that a final decision will be postponed until that information is available. All of this information is highly relevant and should be obtained before decision makers select an alternative.

RESPONSE: FHWA and DOT&PF strongly disagree with the assertion that the Draft SEIS does not comply with NEPA's regulatory requirement regarding missing or incomplete information. The document is comprehensive and complete. Impacts of the project alternatives have been disclosed to a reasonable level for public review and for decision makers to identify an alternative that best meets the purpose and need for action.

FHWA and DOT&PF have updated information in the Final SEIS to refresh data, correct errors and omissions, or in other ways respond to comments on the Draft SEIS, as appropriate. For example, the air quality analysis has been updated for the Final SEIS with a study of ferry emissions associated with each alternative (see Appendix Z *2017 Update to Appendix T - Air Quality Modeling Memorandum*). Additional studies were also completed and new information provided for the Final SEIS to address comments on geological hazards and ferry fares.

DOT&PF did not conduct additional studies that would have had excessive costs and would not provide essential information to make a reasoned choice among alternatives. A specific survey for amphibian ponds potentially affected by each alignment was not conducted for the Draft and Final SEIS. Rather, DOT&PF and FHWA assumed that the open water and emergent wetlands identified in the wildlife habitat studies were sufficiently representative of potential amphibian habitat to determine and compare potential impacts of the project alternatives. The alignment of Alternative 2B was shifted to avoid open water and emergent wetlands. As stated in Section 4.3.15.3 of the Draft and Final SEIS, a pre-construction survey would be conducted to confirm the highway would not impact amphibian ponds.

“[T]he very purpose of NEPA's requirement that an EIS be prepared for all actions that may significantly affect the environment is to obviate the need for . . . speculation by insuring that available data is gathered and analyzed prior to the implementation of the proposed action.” *Found. for N. Am. Wild Sheep v. U.S. Dep't of Agric.*, 681 F.2d 1172, 1179 (9th Cir. 1982). Thus, an agency's starting point for any NEPA analysis is to collect

and describe baseline data about the environment in which the activity is to occur, because, “[w]ithout establishing . . . baseline conditions . . . there is simply no way to determine what effect [an action] will have on the environment and, consequently, no way to comply with NEPA.” *Half Moon Bay Fishermans’ Mktg. Ass’n v. Carlucci*, 857 F.2d 505, 510 (9th Cir. 1988); *see also Ctr. for Biological Diversity v. Bureau of Land Mgmt.*, 422 F. Supp. 2d 1115, 1163 (N.D. Cal. 2006) (baseline is the “heart of the EIS” and must “be accurate and complete”).

When an agency confronts incomplete or unavailable information as part of the environmental review process, NEPA regulations explain how the agency must address that information in the environmental impact statement. *See Mont. Wilderness Ass’n v. McAllister*, 666 F.3d 549, 559- 561 (9th Cir. 2011). “[T]he agency shall include the information in the environmental impact statement” if the missing information is: (1) “relevant to reasonably foreseeable significant adverse impacts;” (2) “essential to a reasoned choice among alternatives;” and, (3) “the overall costs of obtaining it are not exorbitant.” 40 C.F.R § 1502.22(a) (emphasis added); *see also Save Our Ecosystems v. Clark*, 747 F.2d 1240, 1249 (9th Cir. 1984). The regulations place the burden on the agency to make these determinations and explain its rationale in the environmental impact statement. *Native Vill. of Point Hope v. Salazar*, 730 F. Supp. 2d 1009, 1018 (D. Alaska 2010) (“Furthermore, ‘It is well established that an agency’s action must be upheld, if at all, on the basis articulated by the agency itself,’ rather than on post-hoc rationalization by its lawyers.” (quoting *Or. Natural Desert Ass’n v. Bureau of Land Mgmt.*, 531 F.3d 1114, 1141 (9th Cir. 2008), amended and superseded, 625 F.3d 1092 (9th Cir. 2008))). The missing information, moreover, must be “gathered and analyzed prior to the implementation of the proposed action.” *Save Our Ecosystems*, 747 F.2d at 1248 (emphasis in original); *id.* at 1249 (“[S]ection 1502.22 clearly contemplates original research if necessary.”); *see also Cabinet Res. Grp. v. U.S. Fish and Wildlife Serv.*, 465 F. Supp. 2d 1067, 1100 (D. Mont. 2006) (setting aside environmental impact statement, concluding that failure “to attempt any assessment of the importance of the missing information calls into question the validity of the [agency’s] conclusions about the impacts of the proposed action”).

The DSEIS notes numerous instances of relevant information that is not yet available or has not been updated since the 2006 FEIS. FHWA and the Alaska DOT have not indicated that the costs of obtaining this information is exorbitant, and in some cases, the agencies plan to obtain the information prior to construction. However, delaying analysis of effects until after an alternative is selected conflicts with NEPA’s purpose of informing decisions before they are made. The DSEIS should be put on hold until this information is obtained in order to ensure that the decisionmakers and the public are fully informed of the environmental consequences of this project.

RESPONSE: The Final SEIS is the culmination of years of analysis of all issues identified by the public and agencies during numerous scoping and review periods, including review of the Draft SEIS. The information provided in this Final SEIS represents the most recently available information available for resources on issues relevant to the proposed action and alternatives evaluation. It includes updated information from new studies that have been conducted in the project area by DOT&PF

or other agencies as part of their own reporting requirements, or for other purposes. Impacts of the project alternatives have been disclosed to a reasonable level for the decision makers to identify an alternative that best meets the purpose and need for action and would have the least environmental impact (recognizing that one alternative may not meet both tests).

A. Risks of geologic hazards

The DSEIS explains that “[t]he potential risks associated with other geologic hazards, such as landslides (potentially affecting Alternatives 2B and 3), karst (potentially affecting Alternative 3), geochemical properties of waste rock (potentially affecting Alternatives 2B and 3), and outburst floods, would be further evaluated in geotechnical and hydrologic studies conducted in support of final design and construction.” DSEIS at ES-9. This information is clearly relevant to reasonably foreseeable significant adverse impacts, because the risks to be studied will bear on the safety of the roads as well as the environmental impact of construction, maintenance, and use of the roads. It is critical to disclose these risks now so that decisionmakers may make a reasoned choice among alternatives, as the issues of safety and environmental impact are two of the biggest concerns in this project, and not all of the alternatives carry these risks. *See also* 2014 Skagway Marine Access Commission Comments. Finally, there is no suggestion that the cost is too exorbitant, as the studies will eventually be done.

RESPONSE: Per your comment, the description of geologic hazards in the Final SEIS and Technical Alignment Report has been revised to include additional information based on recent geotechnical studies.

B. Survey of amphibian ponds

Similarly, a “pre-construction survey would be conducted to confirm the highway would not impact any amphibian ponds.” DSEIS at 4-87. However, a pre-decisional survey would help inform decisionmakers if there is a substantial difference among alternatives in the extent to which amphibians would be affected by a road alternative. Little information is currently available as to the locations where amphibians are present. Additionally, it can be difficult to predict where they may be, as wood frogs breed in ephemeral pools which may not be present at the time of a survey unless properly timed. Ex. 18 at 6. This issue is important because there is great concern about the high incidence of physical deformities present in wood frogs in Alaska, and these abnormalities have been linked to proximity to roads. Ex. 37 at 1009, 1013. A survey timed to find amphibian ponds when they are most likely to be present should be completed before the final decision is made as to which alternative to select.

RESPONSE: A specific survey for amphibian ponds potentially affected by each alignment was not conducted for the Draft and Final SEIS. Rather, DOT&PF and FHWA assumed that the open water and emergent wetlands identified in the wildlife habitat studies were sufficiently representative of potential amphibian habitat to determine and compare potential impacts of the project alternatives. The alignment of Alternative 2B was shifted to avoid open water and emergent wetlands. As stated in Section 4.3.15.5 of the Draft and Final SEIS, and if Alternative 2B had been selected, a pre-construction

survey would have been conducted to confirm the highway would not impact amphibian ponds.

### C. Air quality modeling

The air quality modeling is inadequate to consider the effects of Alternative 2B because it has not been updated to reflect any differences between the now-defunct Alternative 2 and Alternative 2B, and it continues to omit consideration of any ferry or marine vessel emissions. The DSEIS asserts that the air quality modeling completed for the 2006 FEIS assesses emissions similar enough to those expected to be caused by Alternative 2B. DSEIS at 4-8 to 4-9. The air quality modeling was performed for Alternative 2, and Alternative 2's maximum peak week average daily traffic volume was 3,250 vehicles, while Alternative 2B's maximum figure is 3,160 vehicles. "Because the updated (2014) 30-year PWADT volumes are slightly lower than the Alternative 2 traffic volumes, CO emissions would be slightly lower or approximately equal to the 2004 modeled results." DSEIS, 2014 Update to Appendix T: Air Quality Modeling Memorandum (2014 Update to App. T) at 10 (May 2014). However, the modeling for Alternative 2 did not include marine vessel emissions because "Juneau has no reported exceedances of CO with much larger port facilities, larger concentration of marine vessels, and larger frequency of marine vessel operations." 2005 SDEIS, Appendix T: Air Quality Modeling Memorandum (2005 App. T) at 5 (Oct. 2004).

Under Alternative 2B, ferries are expected to use more fuel than on-road vehicles – 1.26 million gallons per year compared to just over 1 million gallons. DSEIS at 4-188. Alternative 2B's ferries are also expected to consume more fuel than those projected under Alternative 2, which estimated 775,000 gallons of fuel per year. 2005 SDEIS at 4-148 (Table 4-65). Alternative 2 differed from Alternative 2B in that it did not include a shuttle between Haines and Skagway. 2006 FEIS at 2-5 to 2-6. This difference in fuel consumption is relevant because the primary source of emissions on marine vessels is their diesel engines. "Per ton of fuel consumed, ship engines are one of the highest polluting combustion sources worldwide," emitting pollutants such as carbon monoxide, carbon dioxide, nitrogen oxides, sulfur oxides, and particulate matter. Ex. 36 at 9. Alternative 2B's ferries will be energy-intensive because the short trips mean a higher percentage of time will be spent turning, slowing down, or accelerating to approach or leave a dock. *Id.* at 13.

Whether Juneau has reported exceedances of ambient air quality standards is not the sole determining factor as to whether air quality will suffer in the Haines-Skagway-Katzeihin area. Other factors include the potential for dispersion of airborne pollutants, which is ranked very low at the project area, App. T at 3; the likelihood that, since the shuttle ferries will operate on tight schedules for 16-hour days in the summer, they will leave their engines idling in port; and background emissions caused by the high volume of cruise ship traffic in Skagway and the town's status as an important transshipment center, DSEIS at 3-27. The cumulative emissions are likely to be more concentrated in Skagway than in Juneau because the Port of Skagway serves ferries, cruise ships, and freight in one facility, *see* Ex. 39, while Juneau has a ferry terminal and commercial loading facility at Auke Bay, and cruise ship docks and another commercial loading facility downtown. *See* Ex. 55.

Juneau also has “cold-ironing” capability, allowing cruise ships to connect to electricity at berths and turn off their engines, which eliminates the majority of emissions while docked. Ex. 36 at 17. A decrease in air quality in the Skagway-Haines-Katzeihin area could potentially be harmful to residents’ health, reduce visibility, and deter tourists from visiting.

Because the air quality modeling is outdated and never included the emissions of marine vessels, FHWA and the Alaska DOT should conduct new air quality modeling for each alternative in order to better inform the decision makers about potential environmental and human health consequences.

RESPONSE: The Draft SEIS relied on the modeled vehicle emissions for Alternative 2 from the 2004 analysis because the traffic projections of that alternative were higher than, but comparable to, the 2014 projections for Alternative 2B. DOT&PF has conducted additional air quality analysis to determine the effects of ferry and marine vessel emissions on air quality in the general study area and at ferry terminals associated with each alternative. The Final SEIS includes the effects of ferry emissions in the evaluation of air quality for all alternatives.

The Ferry Vessel Air Quality Analysis (see Attachment 1 to the *2017 Update to Appendix T - Air Quality Modeling Memorandum* in Appendix Z of the Final SEIS) considers how air quality in the Haines-Skagway-Katzeihin area would be affected by the alternatives. The analysis identified that the largest increases of air pollutants in Skagway would be 3 percent greater than existing conditions for carbon monoxide, 6 percent greater for nitrogen dioxide, and 2 percent greater for particulate matter (Alternatives 2B and 4A), without accounting for project ferry activity displacing any existing vessel traffic. Because the percent change under any alternative would be low and because the air quality in the area is generally good, dispersion modeling was not conducted.

Environmental Protection Agency (EPA) regulations indicate that dispersion modeling has least uncertainty in areas with good long-term data and relatively flat terrain: “Areas subject to major topographic influences experience meteorological complexities that are extremely difficult to simulate. Although models are available for such circumstances, they are frequently site-specific and resource intensive.” The area is an attainment area for air quality, and the emissions for ferry vessel traffic would be below the EPA *de minimis* levels; therefore, general conformity does not apply. Given good existing conditions and low projected increases, dispersion modeling is not warranted. The Final SEIS evaluates the potential cumulative effects of ferry vessel emissions on air quality in Skagway, where it would contribute to the emissions associated with existing marine vessel activity at the port.

Changes to air quality that would result from the project alternatives have been updated in the Final SEIS to include emissions associated with ferry vessels. These emissions were compared to existing emissions for rural areas such as Haines to ascertain the net change with each alternative. An updated discussion of air quality for each alternative as it relates to human health consequences has been provided in the Final SEIS. The analysis demonstrates that no harm to human health or the environment would result from project-related emissions.

#### D. Fare study

As also noted in the comments raised with respect to development of Alternative 1B, the DSEIS still lacks a comprehensive analysis of whether the ferry system is already running at maximum efficiency. The State has a contract with Northern Economics, Inc. to develop “tariff policy and fare structure” system-wide, which could present a step towards making the analysis of relative demand across the system since the contract requires consideration of “how potential fare changes would impact ridership and revenue levels.” Ex. 6 at 9. Although originally scheduled to be completed by April 30, 2014, the Alaska Department of Transportation and Public Facilities (Alaska DOT) has issued several contract extensions, and the fare study has not yet been released. Ex. 5. The FHWA refuses to delay the NEPA process to allow timely consideration of the fare study, asserting that “it is entirely separate from the JAI project.” See DSEIS Ch. 7, Sec. 7.8, David C. Miller, FHWA, Letter to Stan Selmer, Mayor of Municipality of Skagway (Oct. 10, 2013), at 2; DSEIS Ch. 7, Sec. 7.8, Sandra A. Garcia-Aline, Letter to Mark Schaefer, Mayor of Municipality of Skagway (Aug. 20, 2014), at 1. However, by using reductions in service elsewhere as a factor limiting the increase of service in Lynn Canal, the agencies have brought the entire ferry system into play.

RESPONSE: The Draft SEIS did not fail to address system wide comparative needs. As the commenter acknowledges, Appendix CC explains how Alternative 1B was developed and describes why certain vessels are needed on certain routes. DOT&PF established as a goal that the new alternative would need to meet the purpose and need in Lynn Canal but not by diminishing service elsewhere in the system. As explained in Appendix CC, DOT&PF considered technical capabilities of the vessels, vessel size, operating conditions, and the effect on the AMHS mission (i.e., could a vessel be moved or shared with other routes such that it could provide Lynn Canal service while also maintaining the level of service committed to the other communities). The examination of each vessel is disclosed in the Appendix CC.

In part, certain vessels were rejected as being reasonable for Lynn Canal service because it was found that reassigning vessels to Lynn Canal would be at the expense of reduced service elsewhere. To this extent, DOT&PF did consider demand on the other routes in the system. As explained in Appendix CC of the Draft SEIS, seven of the 11 existing AMHS ferries are not suitable for use in Lynn Canal because relocating/diverting the ferry to Lynn Canal would jeopardize the AMHS mission, including impacts on demand, level of service, and schedule considerations. The AMHS Tariff Analysis was completed in January 2015 and was made publicly available on the AMHS website. The results of this study do not have an impact on this project.

The importance of marketing and pricing in “stimulat[ing] use and revenue regardless of the particular technology, itineraries, equipment, and speed of future AMHS operations” was recognized in 2000. Ex. 28 at 1. The purpose of the Alaska DOT’s current contract is to develop “tariff policy and fare structure” and analyze “how potential fare changes would impact ridership and revenue levels.” Ex. 6 at 9. Two mayors from Skagway have expressed interest in seeing this fare study, DSEIS Ch. 7, Sec. 7.8, Stan Selmer, Mayor of Municipality of Skagway, Letter to FHWA (Sept. 6, 2013); *id.*, Ch. 7, Sec. 7.8, Mark Schaefer, Mayor of Municipality of Skagway, Letter to FHWA (July 28, 2014), and the

Southeast Alaska Conservation Council and Skagway Marine Access Commission have requested a copy of records resulting from the fare study. Ex.

56. These requests have been denied because the fare study has not been completed. However, the information contained in the fare study is highly relevant and essential to a reasoned choice among alternatives because it may present ways to reduce fares, increase ridership, and increase revenues, thereby reducing the costs to users and the government and increasing demand by utilizing more of the capacity currently available. Furthermore, its cost is clearly not exorbitant; the most recent contract extension still limits the amount of the contract to \$59,975. Ex. 5 at Amendment No. 5. The project should not proceed until this important study is completed and its results disclosed to the public.

RESPONSE: The *AMHS Tariff Analysis* was completed in January 2015 and was made publicly available on the AMHS website. The fare study examined AMHS tariff rates and tariff rates for similar ferry systems. The study looked at changes in fares made since the previous rate study was completed in 2008. It also looked for anomalies on routes of similar length within the AMHS system. It considered the development and implementation of changes in tariff policy with the goal of creating a fair and equitable tariff structure. The study did not analyze demand or service to identify inefficiencies. DOT&PF and FHWA have determined that the results of this study do not have a direct bearing on this project. The methodology for assigning fares for this project is described in Appendix A of the *Revised Traffic Forecast Report* (Appendix AA of the Final SEIS).

#### E. Wildlife studies for the west side of Lynn Canal.

Since 2006, the Alaska Department of Fish and Game has conducted field studies on brown bears, moose, mountain goats, and wolverines. DSEIS at 3-68 to 3-70. These studies, however, have focused only on the Alternative 2B proposed alignment, and have not added to information known about the west side of Lynn Canal along the Alternative 3 route. See White, Kevin S., et al., *Mountain goat population ecology and habitat use along the Juneau Access road corridor, Alaska* (2012) (White et al., 2012b) at 3 (Figs. 1 & 2) (mountain goats)<sup>6</sup>; White, Kevin, et al., *Moose population ecology and habitat use along the Juneau Access road corridor, Alaska* (2012) (White et al., 2012a) at 3 (Fig. 1) (moose)<sup>7</sup>; Flynn, Rodney W., et al., *Spatial Use, Habitat Selection, and Population Ecology of Brown Bears along the Proposed Juneau Access Improvements Road Corridor, Southeast Alaska* (2012) (Flynn et al., 2012) at ix, 3 (bears)<sup>8</sup>; Lewis, Stephen B., et al., *Spatial Use, habitat Selection, and Diets of Wolverines along the Proposed Juneau Access Improvements Road Corridor, Southeast Alaska* (2012) (Lewis et al., 2012) at 6 (wolverines)<sup>9</sup>; see also DSEIS at 4-134 (“Brown bear populations and their seasonal movements were not studied by Flynn et al. (2012) on the west side of Lynn Canal”). A reasoned choice among alternatives cannot be made if similar information is not available, and Alaska DOT should fund additional studies designed to inform decision makers of the current status, locations, and threats to wildlife along the proposed Alternative 3 road on

the west side of Lynn Canal.

The little information available concerning these animals points to a need for greater study and understanding of their habitat use on the west side of Lynn Canal. Studies covering the west side of Lynn Canal may help provide greater context for the results of the east side studies, such as whether the east side wildlife are at greater risk of further population declines caused by a road.

Low-elevation habitat is important in the winter for mountain goats and is used by brown bears for foraging in salt marshes and at river mouths. DSEIS 3-70, 4-234. Moose spend most of their time “at elevations below 500 feet during all seasons.” *Id.* at 3-69. On the east side of Lynn Canal from Eldred Rock to Mount Villard, the topography includes portions that are “very steep,” DSEIS at 4-41, and the road alignment in this section covers areas of high use by mountain goats in winter. *See* White et al., 2012b, Apps. 17a-17c, Apps. 18a-18f. In contrast, topography from William Henry Bay to Sullivan Island on the west side of Lynn Canal is described as “rolling to steep hills,” DSEIS 4-97, and from Sullivan Island to Chilkat River the “topography is very flat.” DSEIS at 4-98. The differences in topography could mean that there is more low-elevation habitat available on the west side, but a study is needed to determine what areas are used by wildlife. The amount of winter habitat could potentially have an effect on survival, as most mountain goat deaths occur during winter. Ex. 50 at 1739. Preliminary results from ongoing studies show that different populations of mountain goats in southeast Alaska have experienced different levels of decline in recent years. Ex. 51 at 7 (Table 2). For moose on the east side of Lynn Canal, “[a]nnual survival of adult females (87%) and associated calves (25%) was low, relative to the nearby Gustavus population.” White et al., 2012a at 1. If studies show that the west side population is not as vulnerable as the east side population of mountain goats, moose, or any other wildlife, this information would be useful to decision makers in selecting the final alternative.

More specifically, the threats faced by each species studied on the east side of Lynn Canal may be more or less severe on the west side. With respect to moose, for example, the data gathered “indicate the Berners Bay population is relatively small (ca. 85-120 moose), declined in recent years and is characterized by relatively low productivity as a result of severe winters and low calf recruitment.” *Id.* at 13 (citing fig. 11). In contrast, the DSEIS reports that “[m]oose distribution is more widespread on the west side of Lynn Canal than on the east side,” with “moose populations that are connected with larger populations . . . .” DSEIS at 4-135. This means that “moose mortality from traffic crashes would be more likely with Alternative 3 compare with other alternatives.” *Id.* Without similar data available for each side of Lynn Canal, it is difficult to weigh the potential impacts to moose. On the one hand, the east side population may be more vulnerable due to the low numbers and higher mortality already present. On the other hand, the relatively larger population on the west side may pose greater potential for moose-vehicle collisions. Without studying the location and size of the moose population on the west side, it is impossible to compare these effects meaningfully.

For brown bears on the east side of Lynn Canal, loss of one bear represents two percent of

the population because the population is so small. Flynn et al., 2012 at 65. Due to the “displacement and strong avoidance at distances ranging from 500 m to 3 km” from roads as well as the likely increase in human-bear conflicts resulting in bear mortality, the Alternative 2B route poses serious threats to brown bears. *Id.* at 61-62; *see also id.* at 24-25 (table 4) (showing that almost all collared bears were reported within 1 km of proposed road corridor), 21 (Fig. 4) (depicting road corridor overlapping with narrow corridor used by bears to travel to and from Katzehin River). Because of this vulnerability, the Alaska Department of Fish and Game recommended additional big game hunting restrictions to cover the entire road corridor on the east side of Lynn Canal. *Id.* at 68. In contrast, the DSEIS contains no estimate of the population size of brown bears on the west side of Lynn Canal, no information regarding the likelihood that the bears use habitat in close proximity to the proposed Alternative 3 route, and no assessment of whether big game hunting would have to be restricted on the west side. *See generally* DSEIS at 4-134. The DSEIS fails to provide sufficient information to make an informed choice concerning which alternative(s) may pose an unacceptably high risk to brown bear survival in the project area.

The mountain goats habitat on the west side of Lynn Canal “may intersect” with the Alternative 3 route, but the DSEIS asserts that “there is more potential wintering habitat between the Chilkat Mountains and Lynn Canal for goats to use as refuge from human disturbance.” DSEIS at 4-135. These statements are unsupported by citation to studies similar to the White et al, 2012b study which closely tracked the location of mountain goats on the east side of Lynn Canal to determine their overlap with the Alternative 2B route. *See* White et al., 2012b, Apps. 18a-18o. Due to the steep decline in mountain goat population on the east side of Lynn Canal from 2006 to 2010, *see id.* at 16 (Table 7), information concerning population levels on the west side of Lynn Canal would also be helpful to compare the relative risks each alternative poses to mountain goats.

Finally, the information pertaining to wolverines is insufficient on both sides of the Lynn Canal. While some data were collected on the east side of Lynn Canal, very few traps were placed close to the proposed Alternative 2B route, *see* Lewis et al., 2012 at 6 (Fig. 3), and no traps were placed “along Lynn Canal and the Katzehin River areas because the budget was not sufficient . . .” *Id.* at 7. On both the east and west sides, the DSEIS concludes that “local extirpation of wolverines in the entire project area is unlikely because of the location of the highway at the edge of their habitat, and the low site fidelity of wolverines in southeast Alaska.” DSEIS at 4-85, 4-136 (citing Lewis et al., 2012, although the study did not collect data on the west side of Lynn Canal). Without a comprehensive study of wolverines along either road alignment, however, these assertions carry little weight for decision makers comparing the effects of each alternative on wolverines.

The data collected and analyzed in wildlife studies since 2006 is important to inform decision makers of the effects of Alternative 2B, but the studies must be expanded to cover habitat affected by Alternative 3 in order to allow a reasoned comparison among all alternatives.

Studies covering the west side of Lynn Canal would provide more information about Alternative 3, place the studies covering the east side into context with the surrounding

areas, and disclose potential risks applying to road alternatives that are unlikely to apply to ferry alternatives.

RESPONSE: The best available information has been used to analyze effects to wildlife species, such as brown bear, wolverines, mountain goats, and moose. In some cases, available information on populations in Lynn Canal is limited (such as that for wolverines).

ADF&G studies in the East Lynn Canal project area were not conducted to provide information to support an evaluation of potential effects of Alternative 2B in the SEIS. Rather, they were conducted as mitigation required in the FHWA 2006 ROD for the JAI Project to assist ADF&G in the management of those populations through an understanding of population size and location within Lynn Canal. Extrapolation of regional data to areas in proximity and with similar topography and habitat types is appropriate for an alternatives analysis under NEPA and is commensurate with other NEPA evaluations.

Additionally, Section 4.4 of the *2014 Update to Appendix Q – Wildlife Technical Report*, provided in Appendix Z of the Draft SEIS, uses several broad conclusions from the ADF&G studies to develop a reasonable analysis of potential effects from the construction, operation, and maintenance of Alternative 3 on the west side of Lynn Canal. To not apply these conclusions in the JAI Project NEPA evaluation would limit a reasonable analysis of these effects due to the lack of region-specific information.

## **VII. The DSEIS Fails to Disclose the Juneau Access Project’s Impacts on Wildlife.**

### **A. The DSEIS Fails to Assess the Project’s Impacts on Mountain Goats.**

The DSEIS fails to adequately assess the impacts of the project on mountain goats despite several years of study dedicated to gathering baseline data in the project area. It lacks site-specific information, a discussion of impacts to each genetically distinct population, and a meaningful assessment of cumulative impacts. These issues are critical to address in light of the 47% decrease in overall population of Lynn Canal mountain goats from 2006 to 2010. White et al., 2012b at 16 (Table 7).

Despite years of detailed GPS and VHF tracking and data collection, the DSEIS and the studies commissioned by the Alaska DOT fail to provide site-specific information about where mountain goats’ use of the area in the winter intersects with the proposed road alignment of Alternative 2B, and what effect that overlap is likely to have. By comparison, a very similar study conducted on brown bears included a figure depicting the frequency of bear crossings of the proposed Alternative 2B corridor for each one-kilometer segment. See Flynn et al., 2012 at 31 (Fig. 11). The final mountain goat study prepared for Alternative 2B states that “fine-scale highway design that integrates field visits to identify traditionally used mountain goat trails, mountain goat GPS location data and geotechnical highway construction constraints is recommended in order to maximize efficacy of mountain goat-vehicle collision planning and mitigation.” White et al., 2012b at 18. However, the accompanying figures show that there is high use by mountain goats of the area on both sides of the road alignment from Brown all the way north to Katzehin

River. *Id.* at 62-69. Furthermore, the study also notes that critical winter habitat consists of a closed canopy conifer forest which allows for reduced snow depth, greater forage, and reduced costs of locomotion. *Id.* at 13. The location data collected during the course of the study and the information known about the habitat available along the road alignment should be sufficient to identify potential bottlenecks where goat-vehicle collisions may be more likely, or where the remaining habitat could be insufficient to support the number of goats currently using certain sites.

RESPONSE: The studies conducted by ADF&G were funded by the DOT&PF as mitigation to determine population densities to aid ADF&G in harvest analysis. Section 4.3.13 of the Draft SEIS includes Figure 3-21, which illustrates these potential high use areas as they relate to project alternatives based on information from the studies.

The Draft SEIS considered all the locations of high mountain goat use that would intersect the Alternative 2B alignment. Section 4.3.13 of the Draft SEIS included Figure 3-21, which illustrated potential high use areas as they relate to project alternatives based on information from the studies. Section 4.13.3 of the Draft SEIS identified that the Alternative 2B alignment would intersect winter habitat for mountain goats. As requested by the ADF&G, wildlife crossing signage in areas of high mountain goat use as identified by ADF&G would be incorporated into the road design.

Significantly, the studies conducted since the 2006 FEIS show that the mountain goats in Lynn Canal consist of three genetically distinct populations. *Id.* at 8. The DSEIS notes some impacts to individuals, and concludes that habitat fragmentation “is not likely to impact the area’s mountain goat population.” *See* 2014 Update to App. Q at 23. But between individuals and the overall population, the DSEIS misses an important biological level: the effect on each of the three genetically distinct populations of mountain goats in Lynn Canal. The sharp declines in population from 2006 to 2010 varied among these populations, with the Sinclair Mountain and Lions Head population suffering greater declines of 53%, the Mount Villard population declining similarly by 52%, and the East Berners population declining by 19%. *See* White et al., 2012b at 16 (Table 7); *see also id.* at 8 (describing three genetically distinct populations). The Sinclair Mountain/Lions Head population declined the most, and it is also the population with the greatest overlap of its range with the road alignment. *See id.* at 3 (Figs. 1 & 2).

RESPONSE: FHWA recognizes that genetically distinct populations of mountain goats are found along the alignment of Alternative 2B. However, the overall impacts to the population in Lynn Canal were evaluated for effects in Section 4.3.13 of the Draft SEIS as mountain goat populations are managed by the ADF&G at the game unit level for populations in Lynn Canal, not at the genetic level.

The DSEIS puts some stock in the fact that mountain goat numbers “rebounded modestly by 2011,” 2014 Update to App. Q at 14, but omits that the following winter “was characterized by particularly severe winter conditions” and saw “relatively low survival rates.” Ex. 52 at 8. At Lions Head and Sinclair Mountain, aerial surveys counted 24% fewer goats in 2012 than 2011, and 37% fewer at Mt. Villard. *Id.* at 17-19. “Given that population growth rates are most sensitive to adult survival rates . . . , the observed low survival rate [of the winter of 2011/2012] is likely to result in further declines in local

populations.” *Id.* at 8. With each genetically distinct population estimated to have fewer than 400 individuals in 2011—before the severe 2011/2012 winter further reduced their numbers—the DSEIS needs to grapple with whether the additional reduction in critical winter habitat, in addition to other cumulative effects, may make it impossible for each population to recover from the severe winters over the past decade.

RESPONSE: Best available information from ADF&G regarding winter habitat areas is included in the Final SEIS. Appendix Z *2017 Update to Appendix Q – Wildlife Technical Report*, Section 4.3.4.4, includes uncertainty associated with habitat fragmentation due to construction activities. Per your comment, Section 4.3.15.3 of the Final SEIS discusses the impacts on mountain goat winter range due to habitat fragmentation from construction.

The DSEIS also lacks a sufficient discussion of cumulative impacts on mountain goats in the project area. The Wildlife Report lists potential goat-vehicle collisions, avalanche control fatalities, increased hunting access, and increased possibility of poaching as potential effects, but does not provide any estimate of how much the populations might decline due to these important factors. *See* 2014 Update to App. Q at 24. Critically, mountain goats are known to forage in avalanche chutes during winter, meaning not only that they will be disturbed by helicopters and blasting from avalanche control operations, but also that “the likelihood exists for mountain goats to be killed in human instigated avalanches that occur during routine control activities.” White et al., 2012b at 18. While the Wildlife Report proposes to mitigate this risk by hazing the goats, 2014 Update to App. Q at 40, the recent research studies make no such recommendations. Instead, researchers recommend that “avalanche control crews examine[] avalanche chutes for the presence of mountain goats prior to blasting and adjust[] avalanche control scheduling to occur during times when mountain goats were not present in avalanche paths.” White et al., 2012b at 18.

Additionally, the cumulative impacts section entirely fails to consider Kensington Mine operations, tourism, or climate change. Alaska Department of Fish and Game recognizes that “mountain goats are particularly sensitive to industrial disturbance activities such as helicopter overflights and blasting. In coastal Alaska, helicopter tourism (flight-seeing in summer, helicopter skiing in winter) is an increasingly popular activity and management agencies are particularly concerned about its effects [on] mountain goat populations. Industrial activities such as mining, road construction and hydroelectric development also have the potential to have detrimental effects on mountain goat populations.” Ex. 2. Because the Kensington Mine is located in the Lions Head study area, it has the potential to place additional stress on the population in Lions Head/Sinclair Mountain, which, as discussed above, appears to be the population most at risk. *See* Ex. 52 at 8-9. Climate change could also reduce goats’ ability to survive severe winters because “mortality tends to be higher after a hotter summer, and this may be related to forage. . . . It’s also possible heat stress could be a factor as well – goats are best equipped for winter, not summer.” Ex. 54 at 5. Expected increases in temperature due to climate change are likely to place additional stress on mountain goats and the availability of forage, which is already at risk due to the footprint of the road.

RESPONSE: Section 4.3.15.3 of the Draft SEIS included a description of the impacts of

vehicular collisions on mountain goat. Due to poor visibility in winter, the proposed highway could create the potential for vehicle collisions. Wildlife crossing signage in areas of high brown bear, moose, and mountain goat use as identified by ADF&G would be incorporated into the road design. Quantitative estimates of collisions were not completed but given the population levels and anticipated traffic volumes mortality from vehicular collisions is not expected to have population level effects.

Section 4.3.15 of the Final SEIS is updated to reflect that avalanche control activities would likely occur during spring and could result in mortality to mountain goats because avalanche chutes are in steep habitat preferred by goats, and are occasionally used for forage. The noise from avalanche detonation would be noticeable to mountain goats. Although mountain goats may react to sounds from avalanche detonation, they return to their previous behavior within an hour or so after isolated disturbances. The noise created by the resulting avalanche would be no different than that from naturally occurring avalanches. Cumulative impacts to mountain goats are discussed in Section 4.9.2.12 of the Draft SEIS. Additional details have been included in the Final SEIS.

Finally, in addition to a comprehensive and meaningful analysis of the project's direct, indirect, and cumulative effects on mountain goats, FHWA and the Alaska DOT should examine mountain goats' place in the ecosystem. Bears and wolves are known to prey on mountain goats, and wolverines also scavenge goats. *Id.* at 5. Because the deer population on the east side of Lynn Canal is considered to be "very small," DSEIS at 4-84, mountain goats may be particularly important prey in the project area.

RESPONSE: The analysis and ecological importance of mountain goats in the project area was discussed in Section 4.3.15 of the Draft SEIS and in Appendix Z *2014 Update to Appendix Q – Wildlife Technical Report*. Per your comment, details on mountain goats as a prey species has been added to Section 4.3.15 of the Final SEIS.

#### B. The DSEIS Fails to Assess the Project's Impacts on Wolves.

The DSEIS fails to disclose or in most cases even discuss adverse effects on the Alexander Archipelago wolf (the wolf). As an initial matter, it ignores the fact that earlier this year, the U.S. Fish and Wildlife Service (the Fish and Wildlife Service) determined that the wolf's dwindling numbers mean that the species might have to be listed for protection under the Endangered Species Act (ESA). *See* Exs. 45, 46 (concluding a petition to list the wolf under the ESA presented "substantial scientific or commercial information indicating that listing the Alexander Archipelago wolf may be warranted"). The Service based its conclusion on the critical finding that removing old growth habitat reduces habitat quality and availability for Sitka black-tailed deer, the primary prey of wolves in Southeast Alaska. The DSEIS ignores the loss of deer and wolf habitat created by the highway.

RESPONSE: On January 5, 2016, the USFWS published a "not warranted" 12-month finding in the Federal Register. The finding determined that the Alexander Archipelago wolf does not warrant federal protection under the federal Endangered Species Act.

Section 4.3.15 of the Draft SEIS provided an assessment of project effects on terrestrial

mammals, including wolves and Sitka black-tailed deer, due to habitat loss, avoidance of roads, and vehicle collisions. Per your comment, Section 4.3.15 of the Final SEIS includes the pertinent information from the 2004, 2005, and 2014 wildlife technical reports and incorporates recent information on the effects of increased hunting and trapping pressures on Alexander Archipelago wolves, as well as wolf habitat use and loss as a result of Alternative 2B.

The DSEIS also fails to explain the effects of inhibiting wolves from using particular areas and thereby reducing prey accessibility. *See* DSEIS at 4-85. Indeed the agency admits it lacks information regarding the importance of these areas for wolves. For example, the DSEIS explains that “[s]ome wolves use estuarine areas to feed on marine mammals and fish, but the importance of these areas for wolves in the Berners Bay area is not known.” *Id.* at 4-85. The DSEIS fails to comply with the requirements for confronting this unknown information. *See* 40 C.F.R. § 1502.22.

RESPONSE: Section 4.3.15 of the Final SEIS includes a discussion on the prey accessibility impacts for wolves from habitat fragmentation from Alternative 2B.

The DSEIS ignores the fact that building a road increases hunting and trapping pressures on wolves. *See, e.g.*, DSEIS at 4-181 (limiting discussion to highway inhibiting use of this area by wolves). The rate of wolf harvest increases with density of roads, which provide access to hunters and trappers. Ex. 35. The DSEIS also disregards the effects of illegal take, which has been estimated to be as much as 46 percent of wolf mortality. Ex. 35 at 1547. The agency cannot ignore the adverse effects caused by the increased access created by a new highway.

In sum, the DSEIS provides little more than cursory references on a handful of pages to address the consequences of a highway on a species that is on the verge of an ESA listing. The FHWA must confront and disclose the consequences of this project, as well as the additional development it will facilitate, on this imperiled wolf.

RESPONSE: Information regarding hunting and trapping pressures on wolves that would have resulted from Alternative 2B is incorporated in Section 4.3.15 of the Final SEIS.

#### The DSEIS Fails to Assess the Project’s Impacts on Steller Sea Lions.

The effects of the project on Steller sea lions are discussed thoroughly in Southeast Alaska Conservation Council’s comments on the DSEIS, which are incorporated here by reference. *See* 2014 Southeast Alaska Conservation Council Comments. Additionally, because the DSEIS fails to consider adequately other environmental effects which have a bearing on Steller sea lions, such as the effects to estuarine habitat supporting prey species, discussed *supra*, the DSEIS’s conclusions with respect to Steller sea lions are also inadequate.

RESPONSE: FHWA and DOT&PF have been consulting with NMFS regarding the project and potential effects to Steller sea lions since 1994. Information and collaboration from consultation with NMFS is incorporated into the Final SEIS. The Final SEIS addresses impacts to Steller sea lions from Alternative 2B, including effects

to prey species from impacts on estuarine habitat in Section 4.3.13 This additional information does not change our conclusions regarding the potential impacts to Steller sea lions and their forage fish, which are discussed in Section 4.3.3 of the *2014 Update to Appendix S – Steller Sea Lion Technical Report*, provided in Appendix Z of the Draft SEIS.

### **VIII. The Analysis and Treatment of Bald Eagles is Unexplained and Arbitrary.**

According to the latest eagle nest surveys, “[a] total of 136 bald eagle nests are located less than 0.5 mile from the work limits of” Alternative 2B, of which 99 nests are within 660 feet and 63 of the 99 nests are within 330 feet of construction activity. DSEIS, 2014 Update to Appendix R: Bald Eagle Technical Report (2014 Update to App. R) at 12 (May 2014). The DSEIS asserts that “it is not practicable to limit construction” to the time period outside of bald eagle breeding season, as recommended by the Fish and Wildlife Service’s National Bald Eagle Management Guidelines (Eagle Guidelines) (cited by DSEIS at 4-12, 4-216, 10-22, and 2014 Update to App. R at 6, 15, 16). *Id.* at 15. The Alaska DOT expects to apply for disturbance permits for all nests within 660 feet of construction and 0.5 mile of blasting activities. *Id.*

This assessment is inadequate. Blasting is also to be avoided within 0.5 mile of communal roosting sites, Eagle Guidelines at 14, but it appears that the Alaska DOT has not conducted a survey to determine the possible locations. Helicopters are not to be used within 1000 feet of nests during the breeding season, which begins in February in Alaska, *id.* at 6, 14, meaning that avalanche control activities that utilize helicopters could disturb up to 46 nests. DSEIS at 4-88.

RESPONSE: Sections 4.3.16, 4.4.16, 4.6.16, and 4.8.12 of the Draft SEIS incorporated the evaluation of effects to bald eagles during operation and construction from the *2004 Appendix R – Bald Eagle Technical Report* and *2014 Update to Appendix R – Bald Eagle Technical Report*. Also, Section 5.7 of the Final SEIS has been updated to clarify that a pre-construction survey would be conducted for bald eagles if a build alternative were selected. As described in the *2014 Update to Appendix R – Bald Eagle Technical Report*, surveys conducted since 1997 have not indicated the presence of communal roosting sites along the project.

As explained in Section 5.2 of the *2014 Update to Appendix R - Bald Eagle Technical Report*, bald eagle nests located in or near the avalanche prone areas may be impacted by intermittent helicopter operations and blasting noise. Charges would be dropped into avalanche trigger zones generally located well above timberline, relatively far from eagle nests along the shoreline. Response to such disturbances may include flushing from the nest, or abandoning the nest (Steidl and Anthony, 2000). Maintenance blasting along avalanche prone areas of Alternative 2B could occur within 0.5 mile of up to 46 nests in the most severe snow circumstances, but in a typical spring only a fraction of that total might be affected. DOT&PF would coordinate with USFWS to determine if a Disturbance Permit is necessary for annual maintenance blasting in avalanche areas.

Finally, because this project will result in the loss of 412 acres of old growth forest habitat and require clearcutting along the road’s path with adequate shoulders, *id.* at 4-47, 4-79,

the Alaska DOT should consult with the Fish and Wildlife Service to determine whether it would also be appropriate to apply the guidelines with respect to timber harvesting operations, which recommend avoiding clearcutting and removal of overstory trees within 330 feet of nests and avoiding harvesting operations during breeding season within 660 feet of nests. Eagle Guidelines at 13.

Given the Alaska DOT believes it cannot comply with any of these guidelines, its request to the Fish and Wildlife Service will be for a permit to disturb an unprecedented number of nests and communal roosts. A permit may only be issued if the disturbance is “[c]ompatible with the preservation of the bald eagle . . . , including consideration of indirect effects and the cumulative effects of other permitted take and other additional factors affecting eagle populations.” 50 C.F.R. § 22.26(e)(2)(i); *see also* 16 U.S.C. § 668a (Interior Department may permit taking of eagles if “compatible with the preservation of the bald eagle”).

RESPONSE: Other projects completed by DOT&PF have been granted permits under the Bald Eagle and Protection Act from USFWS and have received set back variances from the City and Borough of Juneau. As stated in Section 4.8.12.6 of the Draft SEIS, the USFWS may require additional monitoring or mitigation as a stipulation of a permit approval. The City and Borough of Juneau previously issued a bald eagle set back variance for roadway construction Echo Cove to Sweeny Creek as part of a project in the vicinity.

The DSEIS does not provide any basis for analyzing whether the disturbance of such a large number of eagles in most of their range along the east side of Lynn Canal is compatible with the preservation of the bald eagle, and makes no mention of other permitted takes or other factors affecting the local and regional eagle populations. For example, a permanent loss of an eagle nest was permitted recently at the Juneau airport, Ex. 14, and there have been eagle strikes at the airport in the past, including during nesting season. Ex. 53 at 2. These and other factors must be analyzed to determine whether the direct, indirect, and cumulative effects may pose a threat to preservation of local and regional eagle populations.

RESPONSE: Section 4.9 of the Draft SEIS included an evaluation of cumulative effects on bald eagles. Past, present, and reasonably foreseeable projects in combination with the proposed project would result in the loss of a small amount of habitat, no loss of known nest trees for bald eagles, and no measurable loss of food sources. In light of the ability for bald eagles to habituate to human presence, the cumulative impact of increased human presence in the region is not likely to have a population-level effect on bald eagles.

Even if permitted, the Fish and Wildlife Service may impose significant restrictions beyond what the Alaska DOT seems to expect at this time and potentially require compensatory mitigation, which will likely add to the cost of building the road. These costs should be estimated and disclosed to the public for a more accurate picture of the full costs of building a road.

RESPONSE: Mitigation of project impacts on bald eagles would have been site-specific and based on where bald eagle nests are used in the future. Mitigation, if necessary, would have been included as part of the Bald and Golden Eagle Protection Act permitting process and given the anticipated impacts and past practices mitigation costs would have been minimal or no additional cost.

## **IX. The DSEIS Treats Climate Change in an Arbitrary Fashion.**

The DSEIS aptly acknowledges that “There is consensus among the scientific community that the earth’s climate is changing, that the change will accelerate, and that human greenhouse gas . . . emissions (primarily carbon dioxide [CO<sub>2</sub>] emissions) are the main source of this accelerated change in climate.” DSEIS at 4-200. The calculation of how this project will contribute to climate change is particularly important due to Alaska’s susceptibility to the effects of climate change, relatively high rate of change, and its responsibility as an emitter of higher per-capita greenhouse gasses from transportation and industrial sectors than other states. *See id.* at 4-200, 4-229. Additionally, 35% of greenhouse gas emissions in Alaska and more than 50% of greenhouse gas emissions in Juneau arise from transportation. *Id.* at 3-45. FHWA and the Alaska DOT must take a hard look at the contributions to climate change resulting from this project, and have missed some important contributing factors.

The short analysis given to this critical issue underestimates greenhouse gas emissions. The amount of fuel consumed does not include ferry fuel used during loading or unloading, DSEIS at 4-188, nor the fuel used by vehicles while idling at the ferry terminal. *Id.* at 4-202. Depending on what the remote Katzehin ferry terminal ultimately includes, it is possible that drivers will prefer to wait in idling vehicles if there is inadequate waiting room or heating in the terminal, and as discussed elsewhere in these comments, drivers may arrive at terminals well in advance in order to ensure a spot on the ferry of their choosing.

Additionally, the greenhouse gas emissions were calculated by multiplying the amount of fuel used by the amount of greenhouse gas emitted per gallon of gasoline. *Id.* But ferry engines run on diesel, which “creates about 15% more [carbon dioxide] per gallon” than gasoline, i.e., about 10,180 grams carbon dioxide per gallon of diesel. Ex. 43. Using the correct number to determine carbon dioxide emitted by ferries in Alternative 2B results in an increase of 1,587.8 metric tons of carbon dioxide annually. *See* DSEIS at 4-188 (1,260,000 gallons of fuel used by ferries x 10.18 x 10<sup>-3</sup> metric tons of CO<sub>2</sub>/gallon of diesel = 12,826.8 metric tons of carbon dioxide), 4-202 (current calculations estimate 11,239 metric tons of carbon dioxide).

The analysis also fails to disclose climate change impacts stemming from timber harvest “due to the change in the ability to sequester carbon once the trees have been cut.” DSEIS, Ch. 7, Sec. 7.8, Forrest Cole, U.S. Forest Service, Letter to FHWA (Feb. 24, 2014) at 6. Contrary to a typical Forest Service timber sale, where second growth trees are expected to sequester some carbon as they grow, the road and its shoulders will be kept clear of trees and will not benefit from regeneration. No other construction-related greenhouse gas emissions are included in the analysis, either. Finally, the analysis omits

any reference to the social cost of carbon, which federal agencies use to estimate the value of damages associated with a small increase in greenhouse gas emissions. If applied to only the ferry and vehicle figures already disclosed, the social cost of greenhouse gas emissions arising under Alternative 2B for the year 2050 is \$1,658,153. *See* Ex. 42 (using the corrected estimate of greenhouse gas emissions for ferries calculated above, 12,826.8, plus the estimate for vehicle emissions at DSEIS 4-202, 8,991, equals a total of 21,817.8 metric tons of carbon dioxide, which is then multiplied by the 3% discount rate for the social cost of carbon in the year 2050, which is \$76/metric ton of carbon dioxide). FHWA and the Alaska DOT should recalculate the total greenhouse gas emissions expected to result from the project at the appropriate rates for different fuel types and convert these figures into the social cost of carbon for the life of the project in order to better compare and evaluate the alternatives. In light of the disproportionate effects felt by Alaska generally and the responsibility Alaska must take for its per capita emissions, a substantial portion of which arise from the transportation sector, the climate change analysis presently offered is inadequate to address this important environmental effect.

RESPONSE: FHWA based its discussion on FHWA internal guidance for addressing Climate Change in environmental documents. FHWA is satisfied that the information provided in the Final SEIS is consistent with FHWA guidance and adequate for the proposed action.

For projects located in nonattainment areas, analysis of idling vehicle emissions, and possibly those associated with loading/unloading of ferries, are conducted via hot-spot CO and PM analyses; however, because the project is in an attainment area, hot-spot analyses are not required. Furthermore, the speculative nature of idling emissions as described in the comment would be difficult to characterize with any level of accuracy. Therefore, FHWA's opinion is that the current analysis of roadway vehicular emissions is sufficiently conservative for identifying impact conditions.

Updated emissions estimates from ferry vessels are included in the Final SEIS, including CO<sub>2</sub>e estimates from diesel fuel consumption. CO<sub>2</sub>e calculations associated with construction of the project would be well below the significance threshold of 25,000 MT per year. Additionally, these emissions would be temporary and would represent a negligible contribution to climate change. Therefore, FHWA's opinion is that the qualitative discussion of GHG emissions from construction activities is sufficiently conservative for assessing impact conditions.

The social cost of carbon is an estimate of the costs, expressed in monetary value, by damage caused by each additional metric ton of carbon dioxide put into the atmosphere. The damage includes health impacts, economic dislocation, agricultural changes, and other effects that climate change can impose on humanity. This value is generally incorporated into a cost-benefit analysis. The social cost of carbon is difficult to calculate, however, and estimates by economists vary widely. The Interagency Working Group on the Social Cost of Greenhouse Gases (IWG, formerly the Interagency Working Group on the Social Cost of Carbon) continues to develop methods for estimating the social cost of carbon. In its most recent Technical Support Document on this subject, IWG provided estimates ranging from \$11 to \$56 per metric ton of CO<sub>2</sub> in 2015, based on averages from three different

models and depending on discount rates (IWG, 2016). The social cost of carbon increases over time because future emissions are expected to produce larger incremental damages as physical and economic systems become more stressed in response to greater climatic change, and because Gross Domestic Product is growing over time and many damage categories are modeled as proportional to Gross Domestic Product. By 2050, the estimates of the social cost of carbon range from \$26 to \$95 per metric ton of CO<sub>2</sub> (IWG, 2016).

According to CEQ guidance, NEPA does not require monetizing costs and benefits and, when there are important qualitative considerations, the weighing of the merits and drawbacks of alternatives should not use a monetary cost-benefit analysis (40 CFR 1502.23). With respect to GHG emissions, use of a monetary cost-benefit analysis should be appropriate and relevant to the choice among alternatives being considered, (CEQ, 2016).

FHWA has determined that using the social cost of carbon methodology to assess the impacts of the JAI Project alternatives would not be appropriate and relevant to the choice among alternatives; therefore, the methodology is not part of this NEPA analysis. This determination was made for the following primary reasons: 1) the wide range and uncertainty in placing estimates of the value of carbon renders the social cost of carbon methodology speculative and 2) the quantitative analysis of GHG emissions for the JAI Project alternatives indicates their contribution would be a relatively minor contribution to global emissions.

#### **X. The DSEIS's Subsistence Analysis Does Not Comply With the Alaska National Interest Lands Conservation Act.**

The analysis reflected in the DSEIS does not comply with the requirements of the Alaska National Interest Lands Conservation Act of 1980 (ANILCA), which requires that decisions regarding projects on federal lands in Alaska to address impacts on subsistence hunting and gathering uses. In this instance, the FHWA has offered little more than vacuous assertions regarding the impacts various alternatives will have on subsistence practices.

RESPONSE: FHWA has met its obligations under the Alaska National Interest Lands Conservation Act (ANILCA). Section 810 of ANILCA (16 USC Section 3120) requires an evaluation of the effects on subsistence uses of projects located on federal lands. ANILCA (Section 803) defines subsistence uses as the “customary and traditional uses by rural Alaska residents of wild, renewable resources for direct personal or family consumption as food, shelter, fuel, clothing, tools, or transportation; for the making and selling of handicrafts articles out of non-edible byproducts of fish and wildlife resources taken for family or personal consumption; for barter, or sharing for personal or family consumption; and for customary trade.” As defined in ANILCA, “rural” residents live in a community or area that is “substantially dependent on fish and wildlife for nutritional and other subsistence uses.”

Title VIII of ANILCA (Section 810(a)) requires that an evaluation of subsistence uses and needs be completed as part of any federal agency determination to “withdraw, reserve,

lease, or otherwise permit the use, occupancy, or disposition of public lands.” Specifically, ANILCA 810(a) requires an evaluation based on three specific issues: 1) the effect of use, occupancy or disposition on subsistence uses and needs; 2) the availability of other lands for the purpose sought to be achieved; and 3) other alternatives that would reduce or eliminate the use, occupancy, or disposition of public lands needed for subsistence purposes (16 USC § 3120).

Most of the land crossed by the highway segments for Alternatives 2B and 3 are in the Tongass National Forest or the Haines State Park. Therefore, there is very little land along these alternative alignments available for development. The Draft SEIS evaluated potential impacts to subsistence uses protected under ANILCA and concluded that no alternative would significantly restrict subsistence usage. Project impacts to subsistence resources were discussed in Sections 4.2B.6, 4.3.6, 4.4.6, 4.5.6, and 4.6.6 of the Draft SEIS and Sections 4.1.4.2, 4.1.5.2, and 4.1.6.2 in Appendix DD of the Draft SEIS. FHWA has determined that none of the reasonable alternatives would significantly restrict subsistence uses.

In enacting ANILCA, Congress sought “to protect the subsistence way of life for rural residents and the resources upon which they depend, as well as to obviate the need for future legislation regarding environmental conservation and subsistence uses.” *John v. United States*, 720 F.3d 1214, 1218 (9th Cir. 2013) cert. denied, 134 S. Ct. 1759 (U.S. 2014) (internal quotation omitted). To accomplish this purpose, “Title VIII of ANILCA provides that, ‘[e]xcept as otherwise provided in this Act and other Federal laws, the taking on public lands of fish and wildlife for nonwasteful subsistence uses shall be accorded priority over the taking on such lands of fish and wildlife for other purposes.’” *Id.* (quoting 16 U.S.C. § 3114).

The DSEIS recognizes that subsistence practices are important both economically and culturally to the communities of Klukwan, Haines, and Skagway. DSEIS 3-30—31. The DSEIS, however, fails to provide even basic information regarding existing levels of harvest in the area despite the fact that this information is readily available from the Alaska Department of Fish and Game.

RESPONSE: The Draft SEIS relied on the latest available information and data. Reporting of subsistence use in the Draft and Final SEIS is based on the USFS Tongass Resource Use Cooperative Survey (1988), the Alaska Department of Fish and Game (ADF&G), Division of Subsistence, *Subsistence Resource Use Patterns in Southeast Alaska: Summaries of 30 Communities* (1994), and scoping comments. Ongoing DOT&PF communication with ADF&G indicates that no more recent information is currently available. Existing levels of subsistence harvest are discussed in Section 3.1.6 of the Draft SEIS and Section 3.2.4 in Appendix DD of the Draft SEIS.

The DSEIS also acknowledges impacts on subsistence resource populations and habitats, but does not assess the magnitude of those effects. *See, e.g.*, DSEIS at 4-57, 4-109. Indeed it offers little more than conclusory assertions. The agency ultimately provides no analysis or evaluation, rather it simply concludes that various alternatives “would not significantly restrict subsistence uses.” *See, e.g.*, DSEIS at 4-57. The lack of information and analysis is unlawful.

RESPONSE: As outlined above, FHWA has met its obligations under ANILCA. Project impacts to subsistence resources were discussed in Sections 4.2B.6, 4.3.6, 4.4.6, 4.5.6, and 4.6.6 of the Draft SEIS and Sections 4.1.4.2, 4.1.5.2, and 4.1.6.2 in Appendix DD of the Draft SEIS. FHWA has determined that none of the reasonable alternatives would significantly restrict subsistence uses.

Additionally, the Forest Service, in its comments, also explained that the DSEIS's "subsistence analysis does not conform to US Forest Service standards presented in Forest Service Handbook 2090.23." DSEIS, Ch. 7, Sec. 7.8, Forrest Cole U.S. Forest Service, Letter to FHWA (Feb.24, 2014) at 8. The Forest Service told FHWA that "[t]he analysis for each alternative needs to address each evaluation criteria and present a finding." *Id.* (explaining that the finding might require notices, hearings, and other determinations). The lack of information and analysis renders any decision arbitrary because the conclusions are unsupported.

In sum, the FHWA has not fulfilled its obligations under ANILCA to protect subsistence practices and resources.

RESPONSE: FHWA has met its obligations under ANILCA.

## **XI. The DSEIS Fails to Consider Cumulative and Indirect Impacts of Increased Mineral Development.**

The DSEIS fails to rigorously explore the potential cumulative and indirect effects of the Juneau Access Improvements Project resulting from development in the area. The scope of an EIS must include consideration of cumulative impacts, which are those which result "from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions," as well as indirect impacts, defined as those "caused by the action and . . . later in time or farther removed in distance, but are still reasonably foreseeable." 40 C.F.R. §§ 1508.7, 1508.8(b), 1508.25(c). "Indirect effects may include growth inducing effects and other effects related to induced changes in the pattern of land use," *id.* § 1508.8(b), and building a road on either side of Lynn Canal through currently roadless areas would certainly present a major change in use, while increasing the potential for growth in mineral development.

The DSEIS concedes that Alternative 2B would benefit the Kensington Mine "by facilitating the transport of goods and services to the mine site from Juneau and making it more convenient for workers in Juneau, Skagway, and Haines to reach the site." DSEIS at 4-37. Although the current plan for the mine is to produce until about 2020, the operating life could be extended if more ore is discovered. *Id.* at 4-220 to 4-221. The reduction in transportation costs makes it more likely that Kensington Mine will expand, because the anticipated income need not be as high to break even if transportation of workers and supplies costs less. *Cf. id.* at 4-37. In fact, Kensington Mine already has plans for expansion; it filed an application for a hardrock exploration permit at Johnson Creek in June 2014. Ex. 4. Yet the DSEIS never addresses what the mine expansion might mean

for habitat for mountain goats, wolves, eagles, or the many marine species utilizing the adjacent and downstream Berners Bay, the effect of an expansion on wetlands and water quality, and the activities likely to take place that may disturb wildlife, such as blasting. Because expansion of Kensington Mine is reasonably foreseeable even if the road were not built, and is made more likely to occur as an indirect effect of the road, FHWA and the Alaska DOT must take a hard look at the cumulative effects posed by the mine.

The DSEIS also dismisses the likelihood “that any mineral deposits in the region would be developed solely because of this improved access,” because “[d]evelopment of mineral resources is capital intensive, involving many other costs besides access.” DSEIS at 4-37. Although construction of a road may not be the sole reason a mineral deposit is developed, the Alaska DOT’s Roads to Resources program certainly suggests that it is an important factor. The purpose of the Roads to Resources program is “to design and build projects that support development of natural resources,” starting with the identification of “resource development projects that require construction of transportation access.” Ex. 7. For example, the Roads to Resources project for the Ambler mining district is proposed because “[t]here are substantial mineral resources in the region, but access has been a significant obstacle to development.” Ex. 1 at 1.

There is “high mineral potential” in North Lynn Canal, and a database of mineral prospects shows many prospects around Berners Bay, Kensington Mine, and along the route for Alternative 3 on the west side of Lynn Canal. *See* Ex. 3 at 3-195; Exs. 30, 31. The Juneau State Land Plan contemplates a road “to support mining along the USFS-owned shoreline and the state shorelands parallel to the Berners River. There are also federal mining claims on the Upper Antler and Gilkey Rivers. If these claims are developed, ground access may be proposed along these two rivers from their mouths to their headwaters.” Ex. 3 at 3-203. It also notes that “[o]ver the long term, roads and utility corridors that provide improved access to mining or serve as part of a regional transportation and utility system may be considered.” *Id.* at 3-204. The State cannot claim that the possibility of increased mineral development is not reasonably foreseeable when it has been planning for roads to provide improved access to mineral deposits for over two decades. The DSEIS simply fails to analyze the effects of a potential increase in mineral development for both Alternative 2B and Alternative 3.

Because the development of either proposed road is likely to increase mineral development in Lynn Canal and near the important habitat of Berners Bay, FHWA and the Alaska DOT are required to consider the cumulative effects of such development. The failure to do so renders the DSEIS inadequate.

RESPONSE: Per your comment, the Final SEIS has been updated with new information pertaining to reasonably foreseeable future exploration associated with the Kensington Gold Project and potential cumulative impacts to habitat for mountain goats, wolves, and eagles; marine species using the adjacent and downstream Berners Bay; wetlands and water quality; and disturbance to wildlife from activities such as blasting (see Section 4.9.2).

The Draft SEIS (page 4-37) acknowledged that a highway would provide easier and less

expensive access to mineral resources, but access alone does not determine whether a mineral deposit would be developed. FHWA and DOT&PF are not aware of specific mining prospects that would go into development if a road were built, hence the statement “It is unlikely that any mineral deposits within the region would be developed **solely** because of this improved access” (emphasis added). If this project were a Roads-to-Resources project, DOT&PF would look for more certainty in the development of mineral resources with the development of the road. While the development of Alternative 2B or 3 could increase mineral development along Lynn Canal, there is no specific reasonably foreseeable future mining action, other than the Kensington Mine Expansion. In this case, anticipating mineral development as a result of highway access would be speculative. Section 4.9.1.1 of the Final SEIS has been updated to most recent information on Kensington Mine.

## **Lynn Canal Conservation Comments on the 2014 Juneau Access Draft Environmental Impact Statement**

### **Background Information**

Lynn Canal Conservation (LCC) is a grassroots conservation organization based in Haines, Alaska. The Alaska Marine Highway (AHMS) is a non weather-dependent, vital transportation link for our members who access Juneau regularly for business, medical and dental appointments, pleasure, and jet travel. LCC has made substantive comments during each previous Juneau Access comment opportunity, including comments on the Southeast Alaska Transportation Plans (SATP), and we incorporate those comments into the record by reference. If FHWA needs duplicate copies, please let us know.

### **General Comments**

The 2014 Juneau Access Draft Environmental Impact Statement (DSEIS) retains fatal flaws of the 2006 FEIS analysis, and avoids addressing substantive comments made during prior comment and scoping periods. The Juneau Access analysis as presented continues to use faulty assumptions to arrive at conclusions that are disputed by actual data presented in the DSEIS, rendering these conclusions arbitrary and capricious. The continued use of faulty methodologies prejudices the analysis and biases the results.

RESPONSE: The Federal Highway Administration (FHWA) and Alaska Department of Transportation and Public Facilities (DOT&PF) strongly disagree with the assertion that the Draft SEIS retains flaws, avoids addressing substantive comments, uses faulty assumptions, and is arbitrary and capricious. Responses to specific concerns regarding information included in or omitted from the Draft Supplemental Environmental Impact Statement (SEIS) are provided elsewhere in this letter.

The range of alternatives does not include a true No Action alternative.

RESPONSE: The No Action Alternative consists of the highway and ferry system that existed as of 2014, plus improvements programmed by DOT&PF. Programmed improvements are described in Section 2.3.1 of the Draft SEIS. Including programmed improvements as part of a No Action Alternative is appropriate practice for preparation of an EIS when these improvements are already committed.

The court ordered alternative (1B) does not pass a “common sense” test, is not a true Transportation System Management (TSM) alternative as claimed, and is not designed to meet the stated purpose and need.

RESPONSE: DOT&PF and Alaska Marine Highway System (AMHS) staff developed a new alternative based on direction from the U. S. District Court for the District of Alaska

(and upheld by the U.S. Court of Appeals for the Ninth Circuit), shared a draft of that alternative with the public during a new scoping effort for the Draft SEIS, took input on the new alternative, and revised that alternative based on comments received. The new alternative took into account the changes that had occurred to the “existing assets” in the AMHS fleet since the 2006 Final EIS, the capabilities of the vessels in the fleet, and the needs and mission of the fleet in regard to the numerous communities served by AMHS. DOT&PF and FHWA fully disclosed the thought process and evaluation in the Draft SEIS. Appendix CC, *Development of Alternative 1B – Enhanced Service with Existing Alaska Marine Highway System (AMHS) Assets*, of the Draft SEIS described the efforts undertaken to develop Alternative 1B and documented the data and analysis relied upon to create as reasonable an alternative as possible toward solving the transportation problems in the corridor using only existing assets. Alternative 1B incorporated the following considerations:

- Existing AMHS assets reasonably available and feasible for use in Lynn Canal
- Programmed AMHS assets (decisions by AMHS independent of this project that made new Day Boats available in the fleet)
- Enhancements that could be employed that do not involve substantial initial capital investments

The resulting alternative, Alternative 1B, was rigorously analyzed in the context of the project’s purpose and need and as part of National Environmental Policy Act (NEPA) requirements for the consideration of alternatives.

Alternative 1B was developed by AMHS and other DOT&PF professionals with years of optimization experience. They were able to develop a system management alternative that makes improvements over and above Alternative 1 – No Action. DOT&PF identified and evaluated Alternative 1B as a competing NEPA alternative. Alternative 1B addresses the Court’s requirement to evaluate an alternative that makes improvements using existing assets. Alternative 1B uses existing assets and results in an increase in AMHS service in Lynn Canal that would not require a reduction in service outside Lynn Canal.

The purpose and need statement, identical to what has been found inadequate in the past, is still flawed, has been criticized by the EPA, and has again been rejected by the Army Corps of Engineers.

RESPONSE: The purpose and need statement for the FHWA NEPA evaluation has not been found inadequate or flawed. The purpose and need addresses the transportation needs in Lynn Canal. DOT&PF and FHWA data have demonstrated that there is considerably higher demand for travel than is met by the existing system. However, due to high costs, slow travel times, and other inconveniences, the system does a poor job at serving corridor demand. These problems are documented in Chapter 1, *Purpose and Need*, of the Draft SEIS. The Council on Environmental Quality (CEQ) directs federal agencies to grant substantial

deference to the lead federal agency with expertise in the stated field, in this case the FHWA, in determining the purpose and need for transportation projects.<sup>1</sup>

The U.S. Army Corps of Engineers (USACE) did not “reject” the FHWA purpose and need for the Juneau Access Improvements (JAI) Project. The USACE has a different process and its own responsibilities in developing an overall purpose statement. In its project purpose statement for consideration of alternatives for the Section 404 evaluation, USACE did not include the FHWA purpose and need statement components, to reduce State and user costs.

Additionally new geological information has been released since the previous EIS process suggesting there will be considerable significant new impacts to the human environment as a result of implementing the preferred alternative. Although this new information is mentioned in the DSEIS, it has not been evaluated to a level required by the National Environmental Policy Act (NEPA). That is, while extensive information is presented on 41 avalanche paths, there is little information or analysis regarding 99 geological hazards identified since the 2006 Record of Decision.

RESPONSE: The 2017 Update to Appendix D - *Technical Alignment Report* (provided in Appendix Z of the Final SEIS) includes a discussion of the geologic hazards along the Alternative 2B alignment.

For the above stated reasons, the DSEIS fails to meet the requirements of the National Environmental Policy Act and a new document must be prepared for public review rather than the planned simultaneous Final Supplemental EIS and Record of Decision.

RESPONSE: The Draft SEIS meets NEPA requirements. FHWA and DOT&PF have updated information in the Final SEIS to correct errors and omissions, or in other ways respond to comments on the Draft SEIS. There is no need to prepare a new document for public review because the Final SEIS contains the analyses and information needed by FHWA to make a decision on the project in compliance with NEPA requirements.

### **Walk-on Passengers**

A huge flaw of the DSEIS analysis continues to be that it simply does not account for walk-on passengers. Since the DSEIS still does not assess the percentage of passengers using the Alaska Marine Highway System (AMHS) that are walk-ons, despite repeated requests for this information in Lynn Canal Conservation’s (LCC) 2005 and 2006 comments, the DSEIS must use the only reliable information available. Simply stating “AMHS passenger fares do not distinguish walk-on passengers from vehicle drivers and vehicle passengers”<sup>2</sup>

---

FHWA.02003. Guidance on “Purpose and Need.” Available on the internet at <https://www.environment.fhwa.dot.gov/guidebook/Gjoint.asp>

<sup>2</sup> DSEIS at 7-13

is not sufficient. A September, 2000 report prepared for the AMHS and the Alaska Department of Transportation (DOT) found that 45% of all AMHS passengers traveled without vehicles in summer and spring, and 39% were walk-on passengers in winter.<sup>3</sup> The McDowell Group interviewed 1700 passengers between 1999 and 2000 for this study.<sup>4</sup> It is likely that this information is still highly accurate because traffic patterns and volumes in Lynn Canal have been consistent from 2000 through the present.<sup>5</sup>

RESPONSE: The Draft SEIS does discuss walk-on passengers. The road alternatives (2B and 3) represent a shift in the way transportation would be provided in the corridor—away from a primarily public transportation mode that would operate more like a public transit service, to a highway system where private vehicles would provide most of the transportation (shorter, publicly-owned shuttle ferries would provide links connecting the roadways). DOT&PF and FHWA recognize that this shift would have had an effect on walk-on passengers. Sections 4.3.7.5 and 4.4.7.5 of the Draft SEIS describe impacts to “Pedestrians and Bicyclists” for Alternatives 2B and 3, including walk-on passengers. The information includes estimates of how many walk-on passengers might be affected and how they would have been affected, including the anticipated changes in fares.

It is true that DOT&PF and FHWA do not anticipate that walk-on passengers would have continued to find it convenient to have someone drive them to the ferry terminal like they do today. Walk-on passengers are currently able to ride on a subsidized ferry for a long portion of the trip, and under Alternative 2B or 3 they would have needed to drive or be driven for most of the route. The Draft SEIS anticipated that many current walk-on passengers that own vehicles would likely choose to travel by car if a highway were available in the Lynn Canal corridor. Travelers without vehicles would have needed to rent vehicles, take a commuter flight, or travel on private carriers if they develop service to accommodate this demand. The percentage of AMHS walk-on passengers that would choose to travel in their own vehicle if Alternative 2B were selected for the project would depend on a variety of factors such as the cost, frequency, and convenience of a bus or van service.

Section 4.3.7.5 and 4.4.7.5 of the Draft SEIS and Section 3.1.4.1 of the *Socioeconomic Effects Technical Report* included further information on impacts to walk-on passengers, including the potential for bus/van service.

It is incorrect to state that “traffic patterns and volumes in Lynn Canal have been consistent from 2000 through the present.” A review of the 2000 and 2015 *AMHS Annual Traffic Volume Report* data (travel solely within Lynn Canal) indicates a reduction in pedestrian (26

---

<sup>3</sup> 2000 McDowell, Alaska Marine Highway System Marketing and Pricing Study, Volume 1 at 65. Since most travel occurs in the summer, the 45% figure will be used for the purpose of these comments. This study was mentioned on many occasions in LCC’s 2005 and 2006 JAI comments.

<sup>4</sup> *Id* at 6

<sup>5</sup> DSEIS at 1-9, Table 1-1

percent) and vehicle (14 percent) travel since 2000 in Lynn Canal. The source document for the 46 percent walk-ons is dated 2000. With the reduction in pedestrians and vehicle traffic, the 2015 walk-on rate is estimated to be 30 percent. Additional information regarding the forecast of walk-on passengers has been added to Appendix AA of the Final SEIS.

As with the 2005 and 2006 JAI EIS documents, the 2014 DSEIS does not deal with AMHS walk-on passengers in a meaningful or realistic manner. Instead, “capacity and demand analysis in this document focuses on vehicles.”<sup>6</sup> The methodology used divides the average number of ferry passengers by the average number of ferry vehicles and puts all walk-ons into strangers’ vehicles.<sup>7</sup> This is an inaccurate portrayal of existing AMHS service.

This analytical obliteration of walk-on passengers is captured in the following statement: “In Lynn Canal, the only two available modes are auto/ferry and airplane.”<sup>8</sup> There is no further analysis of the highly utilized travel mode of walk-on ferry service. The analysis takes an important AMHS public transportation service and gives it zero value. An analysis where benefits to almost half the travelers are wrongly characterized is meaningless. The absurdity of the analysis is readily apparent from the statement that “passengers were converted to vehicles.”<sup>9</sup> Since it is truly impossible to “convert” a passenger to a vehicle, the DSEIS analysis should not be used to justify dismantling a public transportation system in order to build the preferred alternative.

For example, the analysis becomes highly skewed when allocating travel times, an element of purpose and need, because walk-on passengers do not have to check in 1 to 2 hours in advance of sailing – a requirement only for vehicular traffic. Putting these passengers into hypothetical vehicles adds non-existent wait-time to marine travel for walk-on passengers, which not only unfairly increases the travel time for marine alternatives, but also skews the user benefit analysis when a user “cost” is charged for non-existent wait time, thereby increasing the “cost” of ferry travel for the purpose of analysis. The entire DSEIS analysis becomes meaningless because two of five purpose and need elements - decreasing travel time and decreasing user costs - are wildly inaccurate for 45% of passengers.

RESPONSE: As mentioned previously, the Draft SEIS does address walk-on passengers. The analysis does not put “all walk-ons into strangers’ vehicles.” The analysis uses vehicles and passengers per vehicle as a means to compute valid statistics and to convert estimates between the two metrics.

The Draft SEIS accurately portrays the existing AMHS service in the affected environment chapter (see Section 3.1.7). The commenter objects to the fundamental change in the way transportation would be provided under the road alternatives. Instead of providing point to point “transit” service like the current AMHS service, these alternatives would operate like

---

<sup>6</sup> DSEIS at 1-13

<sup>7</sup> 2014 Appendix AA at 8

<sup>8</sup> 2014 Appendix AA pdf page 116

<sup>9</sup> 2014 Appendix pdf page 119

highways elsewhere in the state, except that they would have short shuttle ferry linkages.

Under Alternative 2B, a substantial segment of current walk-on traffic would be expected to convert to personal vehicle travel. Cost is currently a principal deterrent for ferry travel with a vehicle. As described in Table 4-27 of the Final SEIS, under the No Action Alternative, the one-way out-of-pocket cost for a driver and 19-foot standard vehicle between Juneau and Haines is \$129.50. Under Alternative 2B, the one-way out-of-pocket costs for a driver and vehicle would be \$34.50. Adding vehicle operating costs would result in a total user cost of \$131.50 for the No Action Alternative and \$69 for Alternative 2B. This substantial decrease in the cost of travel between the No Action to Alternative 2B would prompt many more travelers to take their own vehicles. The cost to a walk-on passenger would be \$39 under Alternative 1 – No Action. Not counting ground transportation (transportation to/from the Katzehin and Auke Bay Ferry Terminals), under Alternative 2B, the cost would be \$5; with ground transportation included, the cost is projected to be between \$42 and \$60, which would be about the same or only slightly more than the cost of a walk-on passenger under Alternative 1 – No Action. Further, the substantial increase in overall traffic associated with Alternative 2B represents more opportunities for walk-ons to travel with family, friends, and acquaintances.

More generally, the purpose of investment in public transportation infrastructure is to improve transportation opportunities for the largest number of people in the most cost-effective manner possible. It is not practical or reasonable to expect infrastructure improvements to enhance travel opportunities for all travelers, from all locations, for all travel purposes. Replacing ferry service with a highway would require a change in travel behavior for some travelers, perhaps at some increased expense and inconvenience, while a much larger number of travelers would be able to travel at lower expense and greater convenience. The ten-fold increase in traffic from No Action to Alternative 2B would be the result of lower cost and more convenient travel opportunities for a much larger segment of the region's population.

There is no “analytical obliteration of walk-on passengers.” Under Alternative 2B, walk-on passengers would find it inconvenient to get to Katzehin. DOT&PF and FHWA expect that under the road alternatives, many passengers that currently walk on would drive themselves. It is incorrect to suggest there is “no further analysis of walk-on ferry service” in the Draft SEIS. The Ground Transportation Services section of Sections 3.1.4.1 and 3.2.4.1 of the *Socioeconomic Technical Report* (Appendix EE of the Draft SEIS) describes how walk-on passengers would travel if a highway were constructed and point-to-point ferry service were discontinued. DOT&PF anticipates the private sector operating a bus/van shuttle service to accommodate walk on passengers if that demand developed and it was shown to be profitable. The impacts to walk on passengers are also disclosed in Sections 4.2.7, 4.3.7, 4.4.7, 4.5.7, and 4.6.7 of the Draft SEIS.

It is important to note that Skagway has the only ferry terminal in Lynn Canal that is within reasonable walking distance from residential areas. All other existing terminals must be reached by private vehicle or private carrier. These trips are considered to use both automobile and ferry modes of transportation. In other words, most walk-on ferry passengers currently use a vehicle at one end of their trip or the other, or both.

By AMHS policy, walk-on passengers have the same two hour check-in time as vehicles in Juneau and one hour in Haines and Skagway. The early check in is necessary to avoid delayed departures due to passengers checking in just before the scheduled departure.

The source document for the 45 percent walk-on rate is dated 2000. A review of the 2000 and 2015 *AMHS Annual Traffic Volume Report* (travel within Lynn Canal) indicates a 14 percent reduction in vehicle travel and a 26 percent reduction in pedestrian travel. The 2015 walk-on percentage within Lynn Canal is estimated to be 34 percent in summer only and 30 percent for the year. Additional information regarding the forecast of walk-on passengers has been added to Appendix AA of the Final SEIS.

In addition to skewing the comparison of reasonable alternatives - the basis for choosing a preferred alternative – the analysis ignores the valuable AMHS service of providing public transportation between Juneau, Haines, and Skagway. While this existing service provides tremendous value to the traveling public, and would be eliminated by implementing the preferred alternative, it has no value on paper for the purpose of this analysis, and even negative value in terms of travel time and user cost. Therefore, the analysis inaccurately represents marine transportation alternatives, guaranteeing they will lose when compared with a road.

**RESPONSE:** It is inaccurate to suggest that the existing service is given “no value for the purpose of this analysis.” Costs, benefits, and other metrics are evaluated for the existing service as well as the build alternatives. These metrics allow comparison to the build alternatives (e.g., see Table ES-1). DOT&PF and FHWA have extensively evaluated each of the alternatives equally and objectively. The analysis does not inaccurately represent the marine transportation alternatives. Each alternative used a consistent start and end point to ensure variables such as travel time, waiting time, and costs were treated consistently across the alternatives.

Regarding the cost/value of travel time, assigning dollar costs to travel time is a reflection of the fact that all time has value. And, all time has a cost in terms of trade-offs with other ways that time could be spent. If ferry travel were purely a benefit, then slower trips would have greater value than faster trips. Clearly, many Lynn Canal ferry travelers enjoy aspects of the ferry ride, but it is also true that most travelers prefer shorter travel times (fast ferry) to longer travel times (conventional ferry), all other things being equal. It is also true that some travelers

would prefer driving their own vehicles to riding a ferry over the same route.

The DSEIS wrongly assumes that travel aboard a ferry is time wasted rather than time spent enjoying the ride. Therefore a time cost is assessed to ferry travel. But most passengers actually enjoy the time spent on the ferry and use that time to relax, view the scenery, and meet and talk to new people.<sup>10</sup> Ferry passengers “are traveling primarily for pleasure”. In fact, pleasure travel accounts for 3/4 of summer Lynn Canal traffic and 2/3 of year round traffic.<sup>11</sup> Even though it is suggested that “pleasure travelers may not consider time spent in certain types of travel **as a cost, but rather as a benefit**”<sup>12</sup> no attempt is made to quantify that benefit and assign a positive monetary value for time spent on the ferry. Therefore it goes against all logic to assign time costs **against** ferry travel. That is, the DSEIS methodology erroneously assigns a cost to a benefit. Since the model used assigns costs when travelers are actually being benefited, its use obviously skews the results in favor of a road. 2005 SDEIS Appendix C admits that user benefits based on the value of time are “arbitrary”<sup>13</sup> and “imprecise”<sup>14</sup> and only work in instances where “faster is better.”<sup>15</sup>

RESPONSE: It is true that people value travel times differently based on various factors: work versus pleasure, weather conditions, etc. In developing the choice model coefficients, ferry travel time was not considered as onerous as automobile travel time because other activities can be accomplished during the trip. A similar approach is often used in other mass transit modes such as commuter rail forecasting. As such, the travel model gave 20 percent less penalty to the ferry travel time compared to automobile travel time. In other words, the model coefficient was adjusted to account for the benefits described by the commenter. This relationship was derived from other regions that have ferry service and driving options, and was used to validate the travel model results to existing ferry demand within the corridor.

Nevertheless, DOT&PF and FHWA do not consider assigning a positive value to more time spent riding on the ferry a reasonable assumption. While it is true, some people ride the ferry for pleasure, the same could be said for driving—some driving trips could also be considered for pleasure and thus deserving of being assigned a positive factor. The assigned factors are consistent with standard methodologies for evaluating travel time costs in forecasting/modeling. Regarding the cost/value of travel time, assigning dollar costs to travel time is a reflection of the fact that all time has value. And, all time has a cost in terms of trade-offs with other ways that time could be spent. If ferry travel were purely a benefit, then slower trips would have greater value than faster trips. Clearly many Lynn Canal ferry travelers enjoy aspects of the ferry ride, but it is also true that most travelers prefer shorter travel times (fast ferry) to longer travel times (conventional ferry), all other things being

<sup>12</sup> Id., emphasis added

<sup>13</sup> 2005 Appendix C at 30

<sup>14</sup> 2005 Appendix C at 28

<sup>15</sup> Id. at 29

equal. It is also true that some travelers would prefer driving their own vehicles to riding a ferry over the same route.

The commenter's references to the 2005 Supplemental Draft EIS are misleading. The full quote is as follows:

“Assignment of dollar values to time is a broadly accepted method of comparing transportation alternatives. Because of the wide variation among user needs, preferences and financial means, it is inherently an imprecise process. In the absence of a detailed understanding of market preferences, however, assignment of dollar values allows an overall estimate of how users perceive the cost/value relationship for each alternative. The values allow us to draw conclusions about when and how often travelers would use an alternative if it were available” (Appendix C, page 28).

Similarly, the 2005 Supplemental Draft EIS does not “admit” that user benefits based on the value of time “only work in instances where ‘faster is better’.” The full quote states: “Rather than attempt to capture the subtleties of pleasure value, the model accepts the fundamental principal of transportation utility that faster is better. Experience has shown that this is a reasonable approach to predicting traffic. Shorter travel times and more convenient schedules are assumed to be net improvements in service that lead to additional traffic. To this end, time saved is counted as a benefit and assigned a dollar value.” (Appendix C, page 28.)

Further, actual costs to walk-on passengers if Alternative 2B is implemented are mentioned but not appropriately incorporated into the analysis. There is no rationale given for how the DSEIS arrives at a conclusion that bus fares (if a bus service indeed materializes from the private sector) will be about what it currently costs to travel on a ferry.<sup>16</sup> For those walk-ons who will be forced to fly because they are not traveling with a vehicle and because Katzehin bus service may not materialize or may be infrequent, the expense of Juneau access triples.<sup>17</sup> Availability and costs for car rental will make Alternative 2B prohibitive for many travelers.

**RESPONSE:** The Draft SEIS provides a rationale for how it arrives at its conclusions about bus fares. As explained in Appendix EE of the Draft SEIS (page 129) cited by the commenter, case studies were considered and potential operators were interviewed. The cost of a potential bus service is discussed in Section 4.3.7.5 of the Draft SEIS. Cost, frequency, and convenience of a bus or van service would depend on the projected size of the market for such a service. The Draft SEIS estimates that cost to be in the range of \$40 to \$60 one-way between Juneau and Haines or Skagway based on projected shuttle fares and rates on similar existing bus services.

---

<sup>16</sup> 2014 Appendix EE at 129

<sup>17</sup> DSEIS at 3-32

Per your comment, additional information about the cost for existing walk-on passengers, such the additional for plane or rental car, has been incorporated into Sections 4.3.7.5 and 4.4.7.5 of the Final SEIS.

Despite claims to the contrary, evidence presented in the appendices shows at best a small - and at worst a non-existent - likelihood of private sector bus service from Juneau to the Katzehin. For example, Capital Transit “is unlikely to provide service.”<sup>18</sup> If bus service does materialize, it could make one or two round trips per day in summer. This greatly decreases flexibility and opportunity to travel for all walk-ons and is not accounted for in the 2B analysis. Service providers might be interested if there was a demand and if it were “financially lucrative.” But no such ground service exists at Auke Bay currently,<sup>19</sup> so the probability seems small that Katzehin service would materialize. The difficulties of this hypothetical bus service are apparent in that “scheduling would be a significant challenge for bus service operators.”<sup>20</sup> And “the seasonality of demand would also present a scheduling challenge, with significant variations in demand even within the summer season.”<sup>21</sup> Existing operators commented that off-season service “could be difficult” due to estimated winter volume.<sup>22</sup>

The summary given is that Katzehin bus service “may be of interest to the private sector” with an every other day service to Haines and Skagway.<sup>23</sup> The projected 2006 cost was \$35 to 50 one way, and with inflation would be \$40 to \$60 one way.<sup>24</sup> With the addition of shuttle ferry fares, this would cost more than existing service, as calculated in a later section of these comments. Even though the 2006 analysis concluded that “the private sector would be expected to respond aggressively” to the market,<sup>25</sup> interviews with shuttle operators “**did not support this conclusion.**” Also “there is a lack of independent shuttle companies that might provide said service.”<sup>26</sup> Given the sum of this information, despite rosy projections of “aggressive” response to a new market, on the ground reality indicates that there is not much interest and therefore private sector service is unlikely to materialize.

RESPONSE: It is not true that the Draft SEIS does not account for the concerns raised by the comment in its Alternative 2B analysis. Under Alternative 2B, it would be cheaper for many households to drive rather than travel as walk-on passengers under Alternative 1 – No Action. It is anticipated that most people who currently walk on to the ferries will drive because it is anticipated to be cheaper.

<sup>24</sup> Id

<sup>25</sup> Id

<sup>26</sup> Id

Because DOT&PF is not a transit service, it cannot guarantee that bus service would be available. The Draft SEIS (Section 4.3.7.5) discloses the potential for transit or a private bus service to develop. If it were not developed, or until it were to develop, travelers without a vehicle would be affected and those affects are disclosed in the Draft and Final SEIS. Also, as mentioned in Section 4.3.7.5 of the Final SEIS, travelers would also have the option of renting a vehicle or taking a commuter flight.

This utter lack of concern for 45% of the traveling public is relatively recent. When an East Lynn Canal road was originally proposed, the state recognized the importance of providing public transportation, and the 1999 SATP stated the state would either provide ground transportation or enter into a contract with the private sector “to ensure reliable and convenient ground transportation” for walk-ons.<sup>27</sup>

RESPONSE: The 1999 Southeast Alaska Transportation Plan (SATP) did not propose State involvement for shuttle service in Lynn Canal. The SATP did propose State involvement for service on Wrangell and Mitkof Island road systems (1999 SATP, pg. 36).

If bus service were provided, which is contrary to the evidence presented, it would not meet each Katzehin ferry, but only once or twice a day or perhaps every other day.<sup>28</sup> This is less than or at best equal to the current AMHS opportunity to travel. This means that all those passengers put into other people’s vehicles for the purpose of this analysis do not receive the attributed benefits of increased opportunity to travel and decreased travel costs currently assigned to them in the 2B analysis, rendering the analysis arbitrary and capricious.

RESPONSE: As previously mentioned, the Draft SEIS does not suggest that, for the road alternatives (2B and 3), ferry passengers would be put into other people’s vehicles. The analysis assumes that a good portion of the people who own vehicles would choose to drive those vehicles because of the substantially lower costs and shorter travel times. Walk-on passengers that do get rides with family or friends (or via private shuttles) would also benefit from improved travel times. If private shuttles were to go even once per day, that would be the same opportunity to travel as currently provided, and if they went more than that, the opportunity to travel would be improved. The State’s responsibility, however, is to provide transportation facilities between communities, not the transportation itself. Recognizing the change in travel patterns for walk-on passengers, the Final SEIS thoroughly discloses potential impacts to this segment of travelers in Section 4.3.7.5 for Alternative 2B.

A large segment of walk-on passengers consists of teams traveling in Southeast Alaska for school competitions including basketball, volleyball, track, cross-country, DDF, music, etc.<sup>29</sup> The DSEIS fails to analyze impacts to school districts for increased travel costs due to the necessity of traveling with vehicles large enough to transport teams, or else fly, should 2B be implemented. It is admitted that students travel to competitions by ferry and plane but

---

<sup>27</sup> 1999 SATP at 36

<sup>28</sup> 2014 Appendix EE at 129

<sup>29</sup> 2014 Appendix EE at 87 – 90

“flying students to events is expensive and is subject to weather.”<sup>30</sup> While implementing 2B would have the most impact on Haines and Skagway teams, it would also impact the rest of Southeast teams when they travel to Haines and Skagway for school activities. Currently the AMHS offers half price discounts for groups of 10 or more students to facilitate school activities.<sup>31</sup> Since regional competitions are vastly important to all Southeast communities, these impacts must be assessed.

RESPONSE: Additional information about student transportation has been added to the Final SEIS (see Sections 4.3.5, 4.3.7, 4.4.5, and 4.4.7). The cost and logistics of transporting students to/from interschool events would change under Alternatives 2B and 3. The exact costs of transporting school teams is not known. The cost of student travel depends on many factors, such as the number of students and the need to overnight away from home. It is anticipated that some trips would cost less on the existing ferry system and some trips may cost more, compared to trips on the East and West Lynn Canal Highways. School districts may have to arrange for transportation between Katzehin and Juneau with a private transportation provider or fly out of Haines or Skagway instead of Juneau. As explained in Section 1.4.1.1 of the Draft SEIS, providing transportation for foot travelers is not a primary responsibility of DOT&PF. FHWA and DOT&PF acknowledge that student transportation between Lynn Canal communities would change as a result of the project if Alternative 2B or 3 were selected. Section 4.3.7.4 and Table 4-25 of the Final SEIS include updated user cost information.

Further, many passengers travel without a vehicle simply because many Lynn Canal community households do not own a vehicle. This is true for 9.5% of Juneau households, 7.8% of Haines households, and 3.5% of Skagway households.<sup>32</sup> Clearly these individuals who are now served by walk-on ferry service will not benefit by implementing Alternative 2B. Impacts to this large percentage of Lynn Canal residents have simply been left out of the analysis.

RESPONSE: Effects to residents without vehicles have not been left out of the analysis. Sections 4.3.7.5 and 4.4.7.5 of the Draft SEIS and Section 3.1.4.1 of the *Socioeconomic Effects Technical Report* disclosed the number of households that do not have a vehicle and discussed the impacts to this population.

Also omitted are impacts to elders and the disabled, currently able to ride a ferry to and from Juneau.

RESPONSE: Based on this comment, additional information regarding impacts to elderly and disabled passengers has been added to Sections 4.3.7.5 and 4.4.7.5 of the Final SEIS and Sections 3.1.4 and 3.1.5 of the *Socioeconomic Technical Report* (Revised Appendix EE).

---

<sup>30</sup> 2014 Appendix EE at 90

<sup>31</sup> Personal communication from Haines School Board President Anne Marie Palmieri

<sup>32</sup> 2014 Appendix EE at 127

Like other passengers, elders and the disabled traveling by ferry would continue to need to make accommodations for traveling on the highway portion of their trip between Lynn Canal communities, whether that is from Auke Bay to Juneau or Katzehin to Juneau. Providing transportation for foot travelers is not a primary responsibility of DOT&PF. Sections 4.3.7.5 and 4.4.7.5 of the Draft SEIS describe how pedestrians and cyclists would be accommodated and includes an analysis of the potential for a bus or van service to develop in Lynn Canal.

Economic impacts will be felt by individuals traveling to Juneau to access the airport, because there is no reasonably priced place to leave a vehicle for an extended period of time.

RESPONSE: DOT&PF and FHWA do not deny that Alternative 2B would result in impacts to individuals traveling to Juneau to access the airport. Airport on-site long-term parking is \$14/day and \$75/week. Parking within a 5-minute walk from the terminal is \$5/day and \$100/month (2016). Based on this comment, additional information has been added to the Final SEIS in Sections 4.3.7.5 and 4.4.7.5.

Also impacts will be felt by individuals from one-vehicle households who are traveling alone without a vehicle when that vehicle needs to remain at home to provide work transportation. The number of one-vehicle households in Lynn Canal communities is sizeable: 35.1% of Juneau, 45.9% of Haines, and 34.1% of Skagway.<sup>33</sup>

RESPONSE: The Draft SEIS disclosed the number of one-vehicle households. It is not accurate to expect that all of these one-vehicle household would be affected, because many one-vehicle households only have one person in them (or perhaps one driver). The *Socioeconomic Technical Report* (Revised Appendix EE) has been updated to recognize that people who share a car with others may be inconvenienced if one household member were using the vehicle to travel on Alternative 2B or 3.

To conclude, the NEPA requirement that an agency take a “hard look” at effects to the human environment has simply not occurred for 45% of existing AMHS walk-on passengers. In its analysis of assessing benefits, the DSEIS failed to accurately assess the costs of removing an important existing public transportation service.

RESPONSE: The Draft SEIS does assess effects to walk-on passengers. The road alternatives (2B and 3) represent a shift in the way transportation would be provided in the corridor—away from a primarily public transportation mode that would operate more like a public transit service, to a highway system where private vehicles would provide most of the transportation (shorter, publicly owned shuttle ferries would provide links connecting the roadways). DOT&PF and FHWA recognize that this shift would have had an effect on walk-on passengers. Sections 4.3.7.5 and 4.4.7.5 of the Draft SEIS described impacts to

---

<sup>33</sup> 2014 Appendix EE at 127

“Pedestrians and Bicyclists” for Alternatives 2B and 3, including walk-on passengers. The information included estimates of how many walk-on passengers might be affected and how they would have been affected, including the anticipated changes in fares.

The Draft SEIS did assess the cost of the changes to walk-on travel patterns associated with the highway alternatives. Under Alternative 2B, a substantial segment of current walk-on traffic would likely to convert to personal vehicle travel. Cost is currently a principal deterrent for ferry travel with a vehicle. As described in Table 4-27 of the Final SEIS, under Alternative 1 – No Action, the one-way out-of-pocket cost for a driver and 19-foot standard vehicle between Juneau and Haines is \$129.50. Under Alternative 2B, the one-way out-of-pocket costs for a driver and vehicle would be \$34.50. Adding vehicle operating costs to results in a total user cost of \$131.50 for the No Action Alternative and \$69 for Alternative 2B. This substantial decrease in the cost of travel between the No Action and Alternative 2B would prompt many more travelers to take their own vehicles. The cost to a walk-on passenger would be \$39 under Alternative 1 – No Action. Without ground transportation included (transportation to/from the Katzehin and Auke Bay Ferry Terminals), under Alternative 2B, the cost would be \$5; with ground transportation included, the cost is projected to be between \$42 and \$60 which is about the same as or only slightly more than the cost of a walk-on passenger under Alternative 1 – No Action. Further, the substantial increase in overall traffic associated with Alternative 2B will represent many more opportunities for walk-ons to travel with family, friends, and acquaintances.

The vast majority of Lynn Canal region households have cars. For example, according to the U.S. Census Bureau’s 2010-2014 American Community Survey 5-Year Estimates, 7.6 percent of Haines households do not have a vehicle available, 33 percent have one vehicle, 37 percent have two vehicles, and 23 percent have three or more vehicles. In Juneau, 8.5 percent of households do not have a vehicle available, 35 percent have one vehicle, 39 percent have two vehicles, and 18 percent have three or more vehicles.

More generally, the purpose of investment in public transportation infrastructure is to improve transportation opportunities for the largest number of people in the most cost-effective manner possible. It is not practical or reasonable to expect infrastructure improvements to enhance travel opportunities for all travelers, from all locations, for all travel purposes. Replacing ferry service with a highway would require a change in travel behavior for some travelers, perhaps at some increased expense and inconvenience, while a much larger number of travelers would be able to travel at lower expense and greater convenience. The ten-fold increase in traffic from No Action to Alternative 2B would be the result of lower cost, more convenient travel opportunities for a much larger segment of the region’s population.

As described in the Draft SEIS at Appendix FF – *User Benefit, Life-cycle Cost, and Total*

*Project Life Cost Analyses*-Lynn Canal traffic under Alternative 1 – No Action and Alternative 1B is estimated at 285 and 378 annual average daily users in 2021, respectively. Even if half of that traffic was walk-on, and none of that walk-on traffic converted to personal vehicle use under Alternative 2B, walk-ons would only account for about 7 percent of the Alternative 2B’s 1,913 daily users in 2021. If half of that original walk-on traffic converted to personal vehicle use, only 3 to 4 percent of Alternative 2B traffic would be walk-on. Even doubling or tripling the user cost (to account for shuttle service costs and somewhat longer travel times) for this small segment of the total traffic would have no consequential effect on the results of the User Benefits Analysis.

In summary, regarding the impact of Alternative 2B on walk-on travelers, if the number of unaccommodated walk-on travelers were a significant portion of the traveling public, the private sector would respond with commercial service. If the number of unaccommodated walk-ons were relatively small, commercial service might be less convenient and more costly. It is DOTPF’s responsibility is to provide infrastructure that serves the largest number of travelers in the most efficient way possible, not fully serve the needs of every member of every segment of the traveling public.

Sections 4.3.7 and 4.4.7 of the Final SEIS provide additional information pertaining to walk-on passengers and potential impacts from Alternatives 2B and 3, which require travel by road over the majority of the trip between Juneau and Haines/Skagway.

### **Major Faulty Assumptions**

If data presented in the DSEIS renders the assumptions made invalid, then conclusions drawn from those assumptions are arbitrary and capricious. A significant portion of the purpose and need analysis is based on meeting a travel demand that is not grounded in reality and is appropriately described in a hypothetical context.<sup>34</sup>

A major faulty assumption is that there is a large unmet travel demand in the Lynn Canal corridor, and that “low” Lynn Canal Average Annual Daily Traffic (AADT) is an indication that the “AMHS is not meeting the travel demand in the Lynn Canal.”<sup>35</sup> Additionally the assumption is made that by increasing the opportunity to travel and decreasing travel times and user costs, travel will increase by as much as 500%.<sup>36</sup> The DSEIS states that travel opportunity, travel time, and user costs are “interrelated” elements of purpose and need<sup>37</sup> and will be further discussed in a later section. That said, **there is no statistical correlation between the 25 years of Lynn Canal travel data presented in the DSEIS and any of these “interrelated” purpose and need elements.**

RESPONSE: All traffic demand models attempt to predict future demand based on

---

<sup>34</sup> DSEIS at 4-4

<sup>35</sup> DSEIS 1-13

<sup>36</sup> DSEIS 1-10 and 1-11

<sup>37</sup> Id 1-10

assumptions and data available in the present. To the extent that they are predicting a future, unknown condition, all demand models are “hypothetical.” A Total Demand Model was developed as a starting point based on empirical data derived from actual travel conditions observed in Alaska and Western Canada from communities with similar geographic characteristics as Juneau. Based on the project team’s research, there were no indicators that travel behavior in Juneau (and for the most part Skagway and Haines) would differ substantially from that of other Alaskan and Canadian communities if full highway access were available. While Juneau is geographically isolated, it is not significantly more remote than other communities where data was collected. The project team made every effort to produce conservative forecasts, and reached the conclusion that Juneau residents would travel in a similar manner to other Alaskan residents. Even today, Juneau residents travel only slightly less on a per household basis than the average Alaskan household, indicating that not much difference exists. Vehicle ownership per capita in Juneau, Haines, and Skagway is also comparable to other Alaska areas.

Next, a travel choice model was used that calculated the probability of travel for a given alternative by comparing travel times, cost, and convenience against the total demand results. This travel choice model was validated against existing travel conditions within Lynn Canal using established statistical modeling procedures and was independently peer reviewed by a professor who specializes in traffic forecasting.

The commenter claims that 25 years of data from AMHS are evidence that “there is no statistical correlation” to the interrelated purpose and need elements. While AMHS has tried various service changes to refine service, including price changes, schedule changes, fast ferries, etc., these service refinements have never been implemented together in a fully developed alternative. None of the tests, replicate the improvements proposed in the SEIS. And none of the service changes was run long enough to provide a true test. It is not within accepted modeling practice or statistical analysis to rely on one or two years of data to surmise a statistically valid correlation (or the lack of one). Furthermore, tweaking one or two variables in a complex system and only running them for a short time, does not equate to a test of the demand that would develop if one of the build alternatives proposed in the SEIS had been implemented.

#### *Opportunity to travel*

Table 1-1 of the DSEIS presents 25 years of actual vehicle and passenger volumes from 1988 through 2012. This large and important database represents actual travel patterns with varying levels of travel opportunities, longer and faster travel times, and standard and reduced user costs. In 1988, a total of 266 Lynn Canal AMHS roundtrips were offered with a resulting AADT of 81 vehicles and 117,045 passengers. By contrast, in 2007, when there was 63% more opportunity to travel, (434 roundtrips versus 266) AADT decreased by 12% to 72, and passenger volume decreased by 33% to 90,433. If the assumption that increased demand will result from providing significantly more opportunity to travel is valid, then

data from 2007, which offered the **most** Lynn Canal trips of any database year should have the most Lynn Canal traffic. Instead, significantly increasing the opportunity to travel resulted in 12 and 33% less vehicle and passenger traffic in 2007 respectively, than 1988. Similarly, the year with the most volume, 1991, had only 66% of the travel opportunity provided in 2007, yet had 24% more vehicle volume and 46% more passenger volume. Even the year with the least travel opportunity, 1989 with 240 round trips, had more passengers and vehicles than 2007. This decline in ridership occurred during a period of regional population growth exceeding 30%.<sup>38</sup>

Another example showing this correlation to be false occurred between 2011 and 2012, when roundtrips decreased in frequency by 14% (from 344 to 296). The DSEIS assumption would predict decreased travel, yet actual traffic volumes show small increases. These are just a few of many examples that illustrate that 25 years of actual Lynn Canal data does not support the underlying assumption of a correlation between increasing opportunity to travel and increased demand.

RESPONSE: Numerous factors go into people's decision to travel. Pulling individual years out of past AMHS travel data is not a valid prediction method. It is misleading and an inaccurate use of the data. It is just as invalid to pick individual years to demonstrate a positive correlation in the data (as an example, between 1989 and 1991, round trips increased from 240 to 290 and passenger demand increased from 115,742 to 131,865—numerous other hand-picked years could be identified incorrectly suggesting a correlation). The reason this approach is invalid is that frequency of service is not the only factor in people's decision to travel—other factors include costs, schedule, or economic conditions in the given year cited. Each of these factors would need to be known to make an accurate assessment. Moreover, the supply in capacity varies from year to year. Inconsistent supply in capacity makes it difficult for the traveling public to plan. When the variable being tested is not consistent long enough for the public to plan and respond, drawing conclusions from the data, as was done by the commenter, is suspect.

The traffic demand estimate was developed based on empirical data derived from actual travel conditions observed in Alaska, British Columbia, and Yukon from communities with similar geographic characteristics as Juneau. It was validated against existing travel demand by ferry within Lynn Canal. To forecast traffic demand for each of the alternatives, the model considered various factors relating to travel time, cost, and convenience of travel.

In developing the forecast, the project team looked at changes in travel options in Lynn Canal during the periods noted above. Ferry ridership demand changes occur for various reasons. The travel choice model is sensitive to several variables including: travel time, travel cost, and frequency of travel. The model was calibrated to match empirical evidence from 1997-1998 and 2004-2007 as closely as possible. The evidence suggests that cost and

---

<sup>38</sup> DSEIS 1-13

convenience of travel are more likely to affect travel behavior than ferry travel time when compared with existing service levels.

In response to comments, the project team modified one of the model variables (i.e., the service index) from its initial formulation to reflect the reduced effect of travel times on the forecasted demand. In accordance with standard modeling procedure, the model was calibrated to base year conditions (see Revised Appendix AA). Given that the model did a good job of matching existing Lynn Canal ridership means that the travel choice model was reasonably validated and applied.

### *Travel Time*

Similarly, the DSEIS claim that generally, “the longer the travel time, the less the actual demand,”<sup>39</sup> is not only not supported, but is refuted by historical data. **Table 1-1 shows there is absolutely no correlation between decreasing travel time and increasing ridership.** Travel time substantially decreased in 2004 and 2005 when the fast ferry M/V Fairweather operated in the Lynn Canal as the day boat.<sup>40</sup> A fast vehicle ferry cuts mainline travel time by a whopping 45% or by 3.2 hours between Haines and Juneau<sup>41</sup> and by an even more whopping 55% (5 hours) for Skagway/Juneau travel.<sup>42</sup> Despite this substantial time-savings, during this 2-year period of fast vehicle ferry service, AMHS Lynn Canal traffic was well below average traffic volumes for the 25-year analysis period presented in the DSEIS. That is, when service between Juneau and Haines, and Juneau and Skagway took 45 to 55% longer due to travel on conventional ferries, the average passenger volume was 104,811 as compared to the fast ferry passenger volume of 97,285 in 2004 and 91,293 in 2005, showing decreases in travel of 7 to 13%.

Similarly, AADT for the 25-year analysis period was 77, and fast ferry AADT fell below this 25-year average with 74 in 2004 and 70 in 2005 – or 4 to 9% less demand. Additionally, 2005 provided the second most opportunity to travel in the 25-year database. Coupling increased travel opportunity with decreased travel time still shows a lack of increased traffic. In fact, 2005 ranks 21 out of 25 for traffic volumes.

Two years of actual data shows the assumption that there is a correlation between decreased travel time and increased demand to be utterly false. This is corroborated, but buried deep inside an appendix: “AMHS ridership data indicated that while the Fairweather reduced the travel time and increased the vehicle capacity to Haines and Skagway, there was little change in overall demand for travel in the Lynn Canal during this time period.”<sup>43</sup> The data shows that people actually enjoy their time spent aboard the AMHS, and the fallacy that “faster is better” will be discussed further in a later section.

**RESPONSE:** As discussed above, people’s travel decisions are complex. Pulling individual

---

<sup>39</sup> DSEIS 1-11

<sup>40</sup> Id.

<sup>41</sup> Id.

<sup>42</sup> Id.

<sup>43</sup> 2014 Appendix AA pdf page 112

years out of past AMHS travel data is not a valid prediction model. It is misleading and an inaccurate use of the data. Numerous factors go into people's decision to travel and the interplay between those variables is complex. Two years of data is insufficient to draw conclusions of a correlation.

The commenter's use of the quote: "AMHS ridership data indicated that while the *Fairweather* reduced the travel time and increased the vehicle capacity to Haines and Skagway, there was little change in overall demand for travel in the Lynn Canal during this time period." The very next sentence indicates that: "It is noteworthy, however, that while total travel demand didn't change during this time, there was a noticeable increase in demand between Juneau and Skagway due to the direct service provided by the *Fairweather* fast ferry, which greatly reduced travel times between the two communities."

These quotes are not, as the commenter suggests, a corroboration of their supposition, buried deep in an appendix. The section in question is discussing the effort to calibrate the travel model and is not a finding that there is lack of correlation between travel time and demand. To the contrary, the travel modelers demonstrate a strong correlation between reducing travel time and responsiveness of demand. Appendix AA indicates, "The travel choice model addresses the issue of latent demand in the Lynn Canal corridor. Latent demand is unrealized demand for travel that is currently suppressed (i.e. trips not made today) because of high travel time and costs." (See Appendix D, Choice Models, in Draft SEIS Appendix AA).

Finally, the commenter makes a leap in logic to correlate raw travel demand data correlating it to their reasoning (i.e., with enjoyment in riding the ferry). As stated earlier, most travelers prefer shorter travel times (fast ferry) to longer travel times (conventional ferry), all other things being equal.

#### *User Costs*

The assumption that decreasing user costs will increase traffic demand did not occur in 2011 when discounted fares were tried and then discontinued because State revenues decreased without significantly increasing ridership.<sup>44</sup> In fact looking at the travel demand for 2011, with decreased fares and 11% more opportunity to travel than the 25 year average, travel volume was down by 11% from the vehicular average and 22% for passengers. Further, for this year of decreased fares, travel opportunity was above average, yet passenger volume was the second lowest on record and vehicle volume was the third lowest on record for the 25-years of data presented in the DSEIS.<sup>45</sup>

RESPONSE: As discussed above, people's travel decisions are more complex than is described in the comment. Pulling individual years out of past AHHS travel data is not a valid prediction model. It is misleading and an inaccurate use of the data. Numerous factors

---

<sup>44</sup> 2014 Appendix CC at 25

<sup>45</sup> DSEIS Table 1-1

go into people's decision to travel. Pulling data from one year is insufficient to test the commenter's hypothesis.

To conclude, cumulative impacts from faulty assumptions and ignored data preclude the required "hard look" at effects to the human environment required by NEPA.

RESPONSE: The commenter has not documented "faulty assumptions." The commenter selected a data set too small to make statistically valid correlations and tried to present them as suggestions that the traffic forecast in Lynn Canal is faulty. It is not within accepted modeling practice or statistical analysis to rely on one or two years of data to surmise a statistically valid correlation (or the lack of one).

DOT&PF and FHWA did not rely on "faulty assumptions," nor did they "ignore data." The demand estimate used for this project was developed based on empirical data derived from actual travel conditions observed in Alaska and Western Canada from communities with similar geographic characteristics as Juneau. The model starts out defining a condition that the modelers called "unconstrained demand." This level of demand predicts how many people would want to travel between Juneau and Haines/Skagway if there were a road the entire way. This predictive condition was based on the assumption that people in Juneau, Haines, and Skagway would exhibit similar travel patterns given the opportunity to travel by road as other similarly situated communities.

Based on the project team's research, there are no indicators that travel behavior in Juneau, Skagway, and Haines would differ substantially from that of other Alaskan and Western Canadian communities if full highway access were available. Based on the data collected, the project team is confident that Juneau residents would travel in a similar manner to other Alaskan residents. Even today, Juneau residents travel only slightly less on a per household basis than the average Alaskan household, even though they do not have full road access. Vehicle ownership per capita in Juneau, Haines, and Skagway is also comparable to other Alaska areas.

The forecast only used the unconstrained demand as an upper bound to bracket the overall demand in the corridor. Each forecast, for each of the alternatives, scales down from the unconstrained demand based on factors of cost, travel time, schedule convenience, etc. Using such factors to predict traveler's choices and behavior amongst competing alternatives is a common modeling practice and is used in nearly every traffic model. By factoring the demand down from the unconstrained demand based on costs, travel time, and convenience, the model predicts reasonable estimates of travel behavior based on the relative merits of the alternatives.

Moreover, more than one approach to predicting future travel behavior was used by the project team. Two methods were selected as being most representative of likely conditions

along Lynn Canal. Each of these two different models was developed independently and resulted in similar estimates of travel volume along Lynn Canal. These approaches were developed by travel modelers at Fehr & Peers. This firm was specifically identified and hired for its expertise in the travel modeling field, and its approach and results were peer reviewed by an independent university professor with expertise in travel modeling and travel behavior prior to the results being accepted for use in the Draft SEIS. The methodology and results of both approaches are fully disclosed in the associated technical report and summarized in the Draft SEIS.

### **Faulty Methodologies**

The JAI analysis continues to use faulty methodologies in addition to the erroneous assumptions just discussed. Methodologies that substantially bias the analysis to selecting a road alternative include traffic forecasts, user cost/benefit analysis, and not realistically incorporating or assigning a positive value to the AMHS service of accommodating walk-on passengers and unaccompanied freight vans. Speculative traffic forecasts, misapplied user cost/benefit analysis, and failure to include a meaningful analysis of walk-on traffic bias the comparison of alternatives, rendering the comparison utterly meaningless in terms of NEPA.<sup>46</sup>

#### *Traffic Forecast and Travel Demand*

The accuracy of the traffic forecast presented in the DSEIS is suspect for several reasons. Firstly, with the benefit of hindsight, it is a statement of fact that **not one prior traffic forecast presented in any previous JAI documents has proven to be accurate**. Based on this track record, it is illogical to assume this DSEIS traffic forecast will be accurate. Secondly, this traffic forecast is based on the concept of “unconstrained demand” which is a hypothetical construct, as will be discussed later. Thirdly, flaws in the methodology inflate anticipated AADT for road alternatives. And lastly, historical traffic demand has remained consistent and flat, despite many attempts to incorporate changes that were – and still are - predicted to increase ridership, as previously discussed.

#### *Previous Traffic Forecasts*

If the DSEIS chooses to rely on predictions of increased demand rather than data that predicts flat demand, it must demonstrate that its current ability to predict demand will be more accurate than its past ability to predict demand. That is, in the table entitled “1996 Estimated Annual Traffic Volumes”, the 1997 Juneau Access DEIS predicted that with improved marine access, Lynn Canal AMHS user demand would be 77,000 vehicles in 1996 or 211 ADT.<sup>47</sup> In 1998, regular Lynn Canal day boat service began, substantially improving marine access, with daily same time arrivals and departures.<sup>48</sup> Yet the 1998 actual ADT was 81, only 38% of the forecasted vehicle volume. In 2004 marine access again improved dramatically with the addition of fast ferry service that halved travel time.<sup>49</sup>

---

<sup>46</sup> 40 CFR 1500.1(b), and 1502 at .1, .14(a), and .24

<sup>47</sup> 1997 DEIS at 2-7

<sup>48</sup> DSEIS at 1-10

<sup>49</sup> Id.

Yet 2004 ADT was 74<sup>50</sup>, only 35% of the volume forecast. Instead of coming to the conclusion that none of the predicted volume increases have occurred, and therefore Lynn Canal AMHS really does meet the demand, the 2014 DSEIS relies on yet another speculative traffic forecast.

RESPONSE: Taking a forecast prepared in 1996 for a specific alternative and comparing it to vastly different conditions in select years many years later is misleading. The build alternatives identified and forecast in 1996 were not implemented and so a valid post-construction evaluation of the accuracy of forecasts was not possible. The traffic forecast of Alternative 1 – No Action from that time also cannot be meaningfully assessed, as operations in Lynn Canal have change from year to year. To suggest that other improvements and operational tests made in Lynn Canal should somehow have generated the same traffic forecasts as the 1996 build alternatives is inaccurate. Unless the same alternatives identified in 1996 were built and operated the same, comparisons are meaningless. Moreover, modifications made to a schedule or fare, and only run for a year or two, would not lead to a fair comparison of the forecast estimate. As discussed above, pulling one or two years of data to try to prove a correlation is inaccurate. To do so on alternatives that were not even implemented is misleading.

The 2005 SDEIS admits, although buried in an appendix, that traffic demand projections are based on speculation rather than hard data: the “demand model is a simplification of a very complex transportation demand environment.”<sup>51</sup> Measuring unmet traffic demand is “difficult” and “imprecise”<sup>52</sup> and fraught with “uncertainty.”<sup>53</sup>

RESPONSE: The 2005 and 2014 models are not “based on speculation rather than hard data.” Furthermore, the model is not “fraught with uncertainty.” All traffic demand models attempt to predict future demand based on assumptions and data available in the present. To the extent that they are predicting a future, unknown condition, all demand models have “uncertainty.” The forecasts produced on the JAI Project use the best available data and traffic demand forecasting models that represent the latest thinking and state-of-the-art practice in transportation planning.

While not nearly as forthcoming regarding the limitations of traffic forecasting, the 2014 DSEIS also admits to problems with forecasts in an appendix: “It is important to recognize the *complexity* and *uncertainty* associated with predicting traffic in Lynn Canal for eight different alternatives over a 30-year forecast period.”<sup>54</sup> It is even more complex for this situation because “there is no established method for determining total demand for highway travel from a community without road access.”<sup>55</sup> A new (and untested) model was created

---

<sup>50</sup> DSEIS Table 1.1

<sup>51</sup> 2005 Appendix C at 25

<sup>52</sup> 2005 Appendix C at 15

<sup>53</sup> 2005 Appendix C at 16

<sup>54</sup> 2014 Appendix AA at 7, emphasis added

<sup>55</sup> Id at 13

using household survey data and highway traffic volumes.<sup>56</sup> The appendix states that in an ideal situation, household survey data would be calculated from Alaskan households with similar geographic characteristics and similar populations as Juneau.<sup>57</sup> But the only Alaskan households in the database are from Anchorage and Fairbanks. Neither city has similar geography or population to Juneau<sup>58</sup> and both have existing road access. The rest of the database is from Idaho, Montana, Wyoming, Colorado, North and South Dakota, Nebraska, Kansas, Oklahoma, and Utah,<sup>59</sup> tossing the concept of similar geographical characteristics out the window. While stating that the ideal database would be X, it is in fact Y, casting doubt on the reliability of the forecast model. That is, the model is only as good as the data, which is admittedly not “ideal.” Given this model was created specifically for this project, it cannot be tested for accuracy, except after the fact. This untested model, where complexity and uncertainty are admitted limitations, arrives at 1240 as the number to be used for unconstrained demand.

RESPONSE: The total demand estimate used for this project was based on empirical data derived from actual travel conditions observed in Alaska, British Columbia, and Yukon from communities with geographic characteristics that are similar to those in Juneau. The commenter only reports a portion of the data collected. The model input analysis also includes Anchorage, Fairbanks, and Whitehorse (as regional centers like Juneau), and includes analysis of similar coastal communities, including Prince Rupert and Port Hardy, British Columbia; and Seward, Homer, Valdez, Haines, and Skagway, Alaska (see Appendix AA, *Traffic Forecast Report*). In terms of travel demand, these communities are very similar, as each has a limited number of road access points. For example, Anchorage has one road connection going north and one going south, while Valdez has only one road connection. The travel model is not “even more complex” because of Juneau’s lack of road access. The *Revised Traffic Forecast Report* states that “two different models were used to ensure a reasonable demand forecast, since there is no established method for determining the total demand for highway travel from a community without road access.”

It is untrue to suggest that the model is “untested.” The total demand estimate developed for this project was based on empirical data derived from actual travel conditions observed in Alaska, British Columbia, and Yukon from communities with geographic characteristics similar to those in Juneau. In fact, there were several Total Demand Model structures considered by the study team. Two methods were selected as being most representative of likely conditions along Lynn Canal. Each of these two different models were developed independently and resulted in similar estimates of travel volume along Lynn Canal. These approaches were developed by travel modelers at Fehr & Peers. This firm was specifically identified and hired for its expertise in the travel modeling field, and its approach and results were peer reviewed by an independent university professor with expertise in travel modeling

---

<sup>56</sup> Id.

<sup>57</sup> Id.

<sup>58</sup> 2014 Appendix AA pdf page 94

<sup>59</sup> Id.

and travel behavior prior to the results being accepted for use in the Draft SEIS.

The results of the model were validated against the existing transportation system. In other words, as is standard modeling practice, the team developed the model and tested it to see how well it predicts travel on the existing system for a known year. Because the model is able to predict existing traffic within an acceptable range, it is considered valid as a starting point for use in predicting future conditions. As previously discussed, this is a standard approach to truth-testing a model and its assumptions. The methodology and results of both approaches are fully disclosed in the associated technical report and summarized in the Draft SEIS.

Comparing the 2006 EIS traffic forecast model with the 2014 traffic forecast model shows wide discrepancies between the two. For example, for Alternative 2B, the 2014 forecast predicts 220% more traffic in the first year and 123% more traffic in year thirty than the 2006 forecast model.<sup>60</sup> The wide difference between these predictions indeed shows that traffic forecasting is “imprecise” and fraught with “uncertainty”. Yet the 2014 DSEIS analysis relies on these traffic forecast numbers. Invalid assumptions generate unreliable data, which renders the conclusions arbitrary and capricious.

Another example showing the unreliability of forecasts is the discrepancy between Lynn Canal corridor passenger profiles. That is, the 2006 Forecast Report estimates 24% of East Lynn Canal traffic would come from outside the Lynn Canal area. The 2014 forecast claims this will only be 8%,<sup>61</sup> or a third of what was expected in 2006.

Since past forecast models failed to accurately predict current demand, there is no reason to believe the projections used in the 2014 DSEIS are anything but more speculation, particularly in the context of how different the forecasts are for the anticipated demand for the preferred alternative between the 2006 and 2014 JAI documents. As will be explained later, the 2014 flawed forecast, biases the selection of the preferred alternative, and violates NEPA.<sup>62</sup>

RESPONSE: The forecasts completed for the project vary between 2006 and 2014 for a number of reasons. First, they are based on different methodologies. Second, they were produced nearly 10 years apart. And third, they have different end years. Each model took into account the most current factors and data available at the time they were produced and each used a valid methodological approach.

DOT&PF considered using the same approach as was done in 2006, which was based on latent demand derived from household surveys, but determined the current approach would provide more accurate results. Commenters on the 2006 EIS indicated that the household

---

<sup>60</sup> 2014 Appendix AA at 30

<sup>61</sup> 2014 Appendix FF at 87

<sup>62</sup> 40 CFR 1500.1(b), 1502.1, 1502.24

surveys overstated demand and that there was a lack of data to support the number of trips made by non-Lynn Canal residents.

Updating the household survey was considered but there was a substantial concern about the possibility for the survey results to be tainted by the notoriety of the project. Given the small sample population and the strong feelings related to the project (both for and against) there was concern that respondents might try to sway the results and not give accurate responses. Moreover, asking respondents how many times they might use a certain alternative, given varying travel times and costs, is extremely difficult for most people to accurately estimate.

Again, the commenter relies on a statistically invalid method in their example to try to make their argument. It is unacceptable practice in modeling or statistics to take one year of data and use it to make accurate predictions or correlations. Pulling one input assumption, from two different methodologies, conducted by two different modelers, years apart and finding a difference does not imply that the modeling is faulty. As is disclosed in the technical studies, and cited by the commenter, predicting the future is difficult. Modelers use the best available data, make assumptions, test those assumptions to validate the model, and do their best to make reasonable predictions. Such an approach was taken to produce the current forecasts. The forecast was prepared by professionals with expertise in their field, and reviewed by an independent professor who specializes in traffic forecasting. Nothing about the methodology or approach was “flawed,” “biased,” “fraught with uncertainty,” or “based on invalid assumptions.”

#### *User Costs and Benefits Analysis*

The EPA criticized the 1997 DEIS for use of an AASHTO methodology that was not designed to compare road travel with marine travel: “We feel that a direct, side-by-side comparison of the economic modeling results cannot be made because the methodology employed was not designed to evaluate ferry systems.”<sup>63</sup> NEPA requires an agency “to respond in a substantive and meaningful way” when given specific criticism for using an inappropriate methodology.<sup>64</sup> Yet 17 years later, the DSEIS analysis again relies on this same, flawed methodology.

RESPONSE: The Draft SEIS does not rely on the user benefit Analysis, but includes it. In addition, the Draft SEIS includes a Life Cycle Cost Analysis, a Total Project Life Costs, and a User Cost/Benefit Analysis.

Necessary information regarding the applicability and serious limitations of the AASHTO methodology is hidden in the 2005 appendices. Appendix V clearly states that the AASHTO user benefit model was never intended to be applied to a new road in an

---

<sup>63</sup> 1997 EPA comments at 7

<sup>64</sup> Council on Environmental Quality “40 Most Asked Questions Concerning CEQ’s NEPA Regulations,” 46 Fed. Reg. 18026 -18034 (March 23, 1981)

undeveloped area; but rather to evaluate options in an existing road system.<sup>65</sup> Since Alternative 2B would be a new road in an undeveloped area, the model does not apply and should not be used, period. 2005 Appendix E confirms this: “The AASHTO formula was designed primarily for evaluating highway projects that make **marginal** changes to **existing** highways or highway networks. . . . Most of these improvements cause only small changes in costs and traffic.”<sup>66</sup> Clearly this model is still as inappropriate as it was when we criticized its use during the 2005 and 2006 JAI NEPA process.

RESPONSE: Appendix FF acknowledges the challenges of employing a traditional American Association of State Highway and Transportation Officials (AASHTO) methodology in evaluating projects involving modes of transportation other than roads. However, the AASHTO methodology, customized for the JAI Project with the specific modifications noted in the User Benefit Analysis, remains appropriate and the best available approach for measuring user benefits associated with each alternative. Further, sensitivity analysis allowed for testing of model inputs and results most closely related to problematic aspects of the AASHTO methodology, such as frequency delay costs.

Again in 2014, AASHTO methodology limitations are acknowledged in the appendices. “Shortcomings” are noted for “projects that involve modes of travel other than roads and highways, or that would cause large changes in traffic or costs of travel. The Juneau Access project has all of these characteristics.”<sup>67</sup> Even though the 2014 analysis slightly modifies the AASHTO methodology, the results are still flawed, emphasizing road benefits and attributing costs to ferry travel that aren’t really costs at all, but actually benefits, as previously discussed.

The methodology attributes a cost (as a percentage of wages that could have been earned) to traveling in the Lynn Canal whether or not that traveler is a wage earner (e.g., a retiree or a juvenile). With this model, time becomes money and faster travel becomes a benefit that saves “user costs.” That is, in addition to actual costs such as fares and gasoline, costs of time are also assigned.<sup>68</sup> But data shows that most passengers actually enjoy time spent on the ferry and use that time to relax, view the scenery, and meet and talk to new people.<sup>69</sup> Ferry passengers “are traveling primarily for pleasure”. In fact, pleasure travel accounts for 3/4 of summer Lynn Canal traffic and 2/3 of year round traffic.<sup>70</sup> Even though it is suggested in previous JAI analysis that “pleasure travelers may not consider time spent in certain types of travel **as a cost, but rather as a benefit**”<sup>71</sup> the methodology used in the current DSEIS analysis still “charges” for time spent on the ferry under the concept of “costs of travelers time.”<sup>72</sup> When this artificial charge for a perceived benefit becomes an attributed cost and gets added to the ferry fare, the cost of ferry travel increases

<sup>71</sup> Id., emphasis added

<sup>72</sup> DSEIS at 4-5

dramatically, biasing the analysis. Therefore, when comparing the purpose and need element of decreasing user costs, ferry alternatives are designed to lose because the methodology artificially inflates those costs. The only admission of the benefits of ferry travel compared to road travel is in an appendix: “All else being equal, people would rather pay slightly more for ferry service than driving. This reflects the lower-stress nature of ferry travel.”<sup>73</sup>

RESPONSE: While it is true that people value travel times differently based on various factors: work versus pleasure, weather conditions, etc., assigning costs in this way is a standard methodology to estimating travel. While the commenter suggests that people value their time on the ferry, the same could be said for driving. Many people drive for pleasure, and surely there would be people who would derive pleasure from driving a new road.

The suggestion by the commenter that an “artificial charge for a perceived benefit was added to ticket cost of the ferry,” thereby “biasing the analysis,” is incorrect. To the contrary, recognizing that other activities can be accomplished during the ferry ride, and based on indications that ferry travel time is not as onerous as automobile travel time, the model gave 20 percent less “weight” to the ferry travel time compared to automobile travel time. In other words, the model coefficient was adjusted to account for the benefits described by the commenter. This relationship was derived from other regions that have ferry service and driving options and was used to validate the travel model results to existing ferry demand within the corridor. Similar practices are employed in other mass transit modes (e.g., commuter rail) where other activities can be accomplished during the trip, effectively reducing the “costs” perceived by the user.

Regarding the cost/value of travel time, assigning dollar costs to travel time is a reflection of the fact that all time has value. And, all time has a cost in terms of trade-offs with other ways that time could be spent. If ferry travel were purely a benefit, then slower trips would have greater value than faster trips. Clearly, many Lynn Canal ferry travelers enjoy aspects of the ferry ride, but it is also true that most travelers prefer shorter travel times (fast ferry) to longer travel times (conventional ferry), all other things being equal. It is also true that some travelers would prefer driving their own vehicles to riding a ferry over the same route. In addition, most travelers are using a Lynn Canal ferry to travel between Haines/Skagway and Juneau and are not taking the ferry trip as a purely pleasure trip.

Finally, the user benefits analysis is only one analysis of many used to identify and disclose meaningful differences among the alternatives. In addition to user costs, DOT&PF and FHWA have considered net present value, lifecycle costs, total project life costs, construction costs, maintenance and operations costs, out-of-pocket user costs, and breakeven analysis to provide a well-rounded picture of the economic tradeoffs amongst the alternatives.

---

<sup>73</sup> 2014 Appendix AA pdf page 116

By using a methodology not designed for comparing a new road to an existing ferry system, the DSEIS creates artificial costs for ferry travel that do not exist in reality. The methodology further skews the comparison in favor of road-building by not assigning time costs for road travel that are reasonably foreseeable, such as delays for winter driving conditions and predicted road closures. Nor does the analysis account for the fact that walk-on passengers do not have to check-in 1 to 2 hours prior to ferry departure, wrongfully attributing wait times to the 45% of marine highway passengers that travel without a vehicle,<sup>74</sup> as previously discussed.

RESPONSE: The user benefits analysis was based on the traffic forecast. The Traffic Forecast Model was specifically designed to compare the travel characteristics among the marine and road/ferry alternatives. It should be noted that all of the alternatives include roads at both ends with a ferry link in the middle. The length of the road link versus the ferry link varies, as does the speed of the ferries. For Alternatives 2B and 3, the ferry links would be short shuttle ferries, with the greatest length traversed via road in a private vehicle, while the other alternatives have a long ferry link with relatively short road links at each end.

The “time costs” for roads are accurately assessed in the travel model upon which the user benefits relies. Road travel times are based on the posted travel speed and are consistently applied to all alternatives. Ferry travel times were based on average operating conditions, observed wait and loading times, and AMHS policies (e.g., check-in times). Similar to road travel being delayed by weather, ferries can also be delayed by weather as well as break downs, extended time for loading/unloading or mechanical delays. No time penalty has been added to those alternatives either. All alternatives are forecast based on an annual average basis, and all alternatives were treated equally. DOT&PF and FHWA have disclosed the impacts of potential road closures and have mitigated those affects to the extent that travel delay should be minimized.

By AMHS policy, walk-on passengers have the same two hour check-in time as vehicles in Juneau and one hour in Haines and Skagway. The purposes of the early check-in is to avoid delayed departures caused by passengers checking in right before scheduled departure.

Of note, the source document of the 45 percent walk-on rate is dated 2000 and is no longer accurate. A review of the 2000 and 2015 AMHS *Annual Traffic Volume Report* (travel within Lynn Canal) indicates a 14 percent reduction in vehicle travel and a 26 percent reduction in pedestrian travel. The 2015 walk-on percentage within Lynn Canal is estimated to be 34 percent in summer only and 30 percent for the year.

For the user cost analysis, a “user” is defined as a 19-foot vehicle carrying 4 passengers.<sup>75</sup> This definition defies all logic because 45% of all “users” do not travel with a vehicle, as

---

<sup>74</sup> 2000 McDowell at 65

<sup>75</sup> DSEIS at ES-7

established earlier in our comments. In the real world, a “user” is “a **person** who uses.”<sup>76</sup> Given that a vehicle cannot be a “user”, the analysis proceeds based on a vehicle carrying a mythical family of 4, when actual travel patterns show local vehicle occupancy of 2.2<sup>77</sup> and data shows an average Juneau household size of 2.6.<sup>78</sup> Basing all cost comparisons on this *mythical* family when *actual* family size is much smaller, and *actual* travel statistics show about half of this vehicle occupancy rate, serves to overstate user costs on ferries, and underestimate user costs on roads, biasing the analysis. This family of 4 analysis is used even though the DSEIS admits that each vehicle on 2B would carry an average of 2.3 people.<sup>79</sup>

RESPONSE: A user was not “defined as a 19-foot vehicle carrying 4 passengers.” Just as suggested by the commenter, users are travelers who “use” the transportation system (in this case either ferries or roads). Fares reported in the Draft SEIS, which reference a family of four, were included in the Draft SEIS only as an example. User costs and user benefits were calculated for all users, not just a “mythical family of four” The methodology (User and Non-user Benefit Analysis for Highways) upon which the user costs and user benefits were computed clearly defines these terms. The methodology suggested by the commenter is not how the analysis was conducted. See the “Methodology and Data” section of Appendix FF for an accurate description of the methodology employed.

Additionally, according to the Government Accounting Office (GAO), most departments of transportation do not use this type of cost benefit analysis because “measuring all the potential benefits and costs of proposed highway and transit investments can be challenging and subject to several limitations and sources of error” including: not figuring in all potential benefits, accurately predicting travel demand, and “routinely” omitting benefits to non-car owners.<sup>80</sup> According to this GAO study, even if the methodology were used appropriately, there still would be significant problems with relying on the numbers it generates. In our past JAI comments, LCC has argued that this seriously flawed methodology should be dropped, and we again make the same point.

RESPONSE: The purpose of the user benefit analysis conducted as part of the Draft SEIS was to determine which alternatives serve the largest number of travelers at the lowest possible cost. It is but one tool used to understand the economic implications of each transportation improvement alternative, along with Life Cycle Costs (Total and Net Costs), Total Project Life Costs (Total Funds and State Funds, Total and Net Costs for each), Total Project Life Costs less Residual Values per Vehicle (Total Funds and State Funds, Total and Net Costs for each), and others. A total of 15 different metrics are used in the Draft and Final

---

<sup>76</sup> Oxford Dictionary, 1998 edition

<sup>77</sup> 2014 Appendix FF at 64

<sup>78</sup> DSEIS at 3-21

<sup>79</sup> DSEIS at 4-45

<sup>80</sup> January 24, 2005 Government Accounting Office report, GAO – 05 –172, “Highway and Transit Investments: Options for Improving Information on Projects’ Benefits and Costs and Increasing Accountability for Results.”

SEIS to assess the economic characteristics of the alternatives, from a stand-alone perspective and in relation to one another.

The Juneau Access User Benefit Analysis was conducted in accordance with the methodology established by AASHTO, with needed modifications to account for the unique challenges associated with measuring traveler costs and benefits across the wide range of multi-modal transportation alternatives considered in the SEIS. Because of the complexity of the JAI Project economic analysis, a wide range of metrics were developed and considered by DOT&PF and FHWA.

Regarding practices elsewhere in country, in addition to the statement quoted in the comment, the Government Accountability Office (GAO) report also notes that: “Officials we surveyed and visited said they considered a project’s potential benefits and costs when considering project alternatives but often did not use formal economic analyses to systematically examine the potential benefits and costs.” GAO goes on to note: “Nevertheless, the increased use of economic analysis, such as benefit-cost analysis, could improve the information available, and ultimately, lead to better-informed transportation investment decision making.” Recognizing that user benefit and life cycle cost analyses do not capture a wide range of other potential household, commercial, industrial, and community benefits associated with improved Lynn Canal access, the DOT&PF and FHWA effort to include a broad set of economic metrics in the JAI Project SEIS is entirely consistent with GOA’s recommendation to employ economic analysis in transportation investment decision making.

Finally, the DSEIS does not quantify known external costs of a road including - but not limited to - increased public safety and emergency response costs, loss of wildlife, loss of wilderness values, etc. These are real costs of roads, some of which can be quantified, and others must at least be incorporated into the decision-making process. “When a cost-benefit analysis is prepared, discuss the relationship between that analysis and any analysis of unquantified environmental impacts, values and amenities. For purposes of complying with the [National Environmental Policy] Act, the weighing of the merits and drawbacks of the various alternatives need not be displayed in a monetary cost-benefit analysis and should not be when there are important qualitative considerations.”<sup>81</sup> This means that qualitative considerations regarding ferry travel should have been considered as merits – but were not, and it also means that the external costs of public safety, emergency response, pollution, wildlife, and wilderness values that “are not included”<sup>82</sup> should have been included. In the context of NEPA, the DSEIS fails to weigh the true merits and drawbacks for each alternative. Instead, incorrect assumptions, misused data, and obvious shortcomings of models and methodologies preclude the required “hard look” at environmental effects in the context of NEPA.

---

<sup>81</sup> 40 CFR 1502.23

<sup>82</sup> 2014 Appendix FF at 2

RESPONSE: DOT&PF and FHWA have disclosed the environmental consequences of the proposed alternatives in the Draft and Final SEIS, including the indirect effects described in the comment. EIS documents do not typically present impacts to the environment in financial terms. The “costs” to the physical, natural, and social environment are the main topic of the entire EIS, however, and it discloses all known impacts, both beneficial and adverse, as required by NEPA. A cost benefit analysis that attempts to compute a dollar figure for the types of impacts identified above would be highly speculative. Because the indirect impacts have been disclosed quantitatively where possible, and qualitatively elsewhere, FHWA has met its requirements under NEPA. Commitments to manage, mitigate, or avoid environmental damage are part of the project and its costs, as disclosed in the SEIS.

### **Purpose and Need**

Purpose and need has not changed from the 2006 analysis. As stated in previous LCC JAI comments, the EPA rejected two out of five purpose and need statements<sup>83</sup>, as has the Army Corps of Engineers.<sup>84</sup> Even though we do not agree with the validity of the stated purpose and need, we will analyze each of five purpose and need “elements” in terms of its ability to “help evaluate. . . project alternatives to meet or approach the overall goal of improving surface transportation to and from Juneau in the Lynn Canal corridor.”<sup>85</sup> The Army Corps of Engineers framed the project goal as improving surface transportation “between the Lynn Canal communities of Juneau, Haines and Skagway.”<sup>86</sup> The Corps choice of language better addresses the fact that this project will change transportation opportunities for all three communities, including transportation between Haines and Skagway, while the DSEIS language narrowly focuses on getting to and from Juneau.

RESPONSE: FHWA, as the lead agency for this transportation project, defines the purpose and need under NEPA, not the Environmental Protection Agency (EPA) or USACE. It is inaccurate to suggest that EPA and USACE “rejected” elements of the purpose and need. The commenter is confusing the overall purpose statement under Section 404 of the Clean Water Act with FHWA’s responsibility under NEPA. Under the Clean Water Act, an overall purpose statement is defined, and it is not necessary for that overall purpose to be identical to the transportation purpose and need.

The purpose and need statement for the project is to improve surface transportation to and from Juneau. DOT&PF and FHWA have updated the data in Chapter 1 of the Draft SEIS since 2006 and have reconfirmed the project purpose and need. Because Juneau is a regional hub, with a substantial population and employment base, the demand for travel in and out of Juneau has been identified as driving the primary needs of the project. The existing level of

---

<sup>83</sup> LCC 2005 DSEIS comments at 1

<sup>84</sup> DSEIS at 1-10

<sup>85</sup> DSEIS at 1-10

<sup>86</sup> Id.

demand and service between Haines and Skagway has not been identified to be a problem and, therefore, FHWA has not included it as a component of the purpose and need under NEPA.

In addition, the CEQ directs federal agencies to grant substantial deference to the lead federal agency with expertise in the stated field, in this case the FHWA, in determining the purpose and need for transportation projects. Neither the EPA nor USACE suggested that the FHWA revise the purpose and need statement. The USACE did remove the two cost components in developing their overall project purpose statement in preparation for their Section 404 analysis.

That said, during adjudication of the 2006 EIS, the court noted that ferry service has improved dramatically over 20 years and that it could be argued that the goal of improving surface transportation has already been met.

RESPONSE: DOT&PF and FHWA disagree that ferry service has improved dramatically over the last 20 years. DOT&PF and FHWA have updated the data in Chapter 1 of the Draft SEIS since 2006 and have reconfirmed the project purpose and need. The No Action Alternative still does a marginal job at meeting the corridor demand, has poor travel times, and limited opportunities and flexibility for travel. All of the reasonable alternatives considered in the Draft SEIS addressed this purpose and need relative to Alternative 1 – No Action. As explained in the Draft SEIS, Alternative 2B, the preferred alternative, best meets the purpose and need for the project.

As previously stated, the DSEIS assumes that if there were more frequent trips that took less time and cost less money, that demand would increase – and these make up three of five purpose and need elements. However, as detailed earlier, historical data shows each of these three assumptions to be false. Further, there are only two ways to access Juneau: by air and by surface transportation. The 2004 SATP recognized the limitations of air travel: “flight delays and cancellations due to weather are common in Southeast Alaska, particularly in the winter months. Poor weather conditions can result in multi-day gaps in service with planes not able to fly until conditions improve. These gaps are particularly problematic in emergency situations, such as when medical evacuation is required.”<sup>87</sup>

Being weather dependent, air travel is not reliable. The DSEIS acknowledges this. Lynn Canal air travel “is often constrained by fog, high winds, or snow storms and can be delayed up to several days in the fall, winter and spring.”<sup>88</sup> If built, the preferred alternative would replace the only available non-weather dependent option – AMHS travel - with Alternative 2B, a second weather dependent option with 150 identified hazards, to be discussed later. For now suffice it to say that maintenance costs will not “provide active snow plowing and patrolling 24 hours per day. During major snow storms and heavy avalanches, staffing is not adequate to ensure trafficable roads at all times, and highway

---

<sup>87</sup> 2004 SATP at 41

<sup>88</sup> DSEIS at 1-7

closures for avalanche monitoring and clean-up will be necessary.”<sup>89</sup> Due to the unpredictable nature of anticipated road closures, reliability should be – but is not - an element of purpose and need. That is, if travelers are limited to two ways to access Juneau and both are weather-dependent, where weather events are “common”, the goal of improving surface transportation in the Lynn Canal corridor cannot be met. That is, opportunity to travel will decrease at all times during inclement weather. Weather-dependent travel would have to be evaluated in the DSEIS but for the fact that DOT has consistently refused to add reliability to purpose and need. Reliability has come up each time the public has had an opportunity to comment on JAI and the SATP. That reliability is still absent from consideration speaks to the continued pro-road bias of JAI documents, because Alternative 2B will not be reliable, as will be detailed later.

RESPONSE: Safety and reliability are included in a purpose and need statement for a project only if there is a demonstrable existing safety or reliability problem on the transportation link being considered. Although AMHS sailings are missed due to Lyn Canal weather, safety and reliability are not a substantial problem with the current system; therefore, neither safety nor reliability are part of the purpose and need for this project. That said, the Draft and Final SEIS does discuss reliability in terms of new potential for delay (e.g., avalanche) of the various alternatives.

Please note that under Alternative 2B, the ferry shuttle is available to connect Auke Bay with Haines/Skagway during road closures.

Scoping comments often sited safety and reliability together. For example, regarding the preferred alternative, scoping “comments received focused primarily on safety and reliability.”<sup>90</sup> And again, regarding purpose and need, comments indicated that safety and reliability should be included.<sup>91</sup> The intent for taking scoping comments is acknowledged as “identifying the significant issues” in order to “clearly define the environmental issues and alternatives to be examined.”<sup>92</sup> Due to weather constraints and an extremely large number of identified avalanches and geological hazards – about 150 in 22 miles of 2B road – continued requests to include safety and reliability as purpose and need elements are understandable and reasonable. The response to the public scoping plea for including safety and reliability in purpose and need due to a real assessment that opportunity to travel to and from Juneau decreases when only weather-dependent options exist was “answered” by a statement that “design standards require that all alternatives presented be safe modes of travel.”<sup>93</sup> A direct and meaningful response to issues of safety and reliability regarding purpose and need is completely absent, and is a major failing of the DSEIS. In this context, the statement that the DSEIS “has been developed to address issues raised by the public ad agencies during scoping”<sup>94</sup> is disingenuous.

---

<sup>89</sup> 2014 Appendix FF at 61

<sup>90</sup> DSEIS at 7-7

<sup>92</sup> DSEIS at 7-1 referencing 40 CFR 1501.7 and CEQ guidance, 1984

<sup>93</sup> DEIS at 7-16 and 17

<sup>94</sup> DSEIS at ES-14

RESPONSE: Safety and reliability are included in a purpose and need statement for a project only if there is a demonstrable existing safety or reliability problem on the transportation link being considered. Safety and reliability are not a substantial problem with the current system; therefore, neither safety nor reliability are part of the purpose and need for this project.

DOT&PF and FHWA have taken the issues raised during scoping seriously and have addressed the issues raised. Safety and reliability not being identified as key reasons for undertaking this project does not mean safety and reliability are not addressed. The effects of the primarily road alternatives (2B and 3) on safety and reliability were disclosed in the Draft SEIS (see Technical Alignment Report, Snow Avalanche Report and Chapter 4 per alternative, in the Geology, Socioeconomic Resources and Transportation sections).

Absent the necessary purpose and need elements of safety and reliability, each alternative is evaluated on whether it meets the stated purpose and need. A fair evaluation would indicate that marine alternatives can and do meet purpose and need as well as - and sometimes better than - the preferred alternative. This has not been the case in past JAI documents and continues to be the case in this one, with obvious violations of 40 CFR 1502.14(a).

RESPONSE: The SEIS does not violate 40 Code of Federal Regulations (CFR) 1502.14(a). DOT&PF and FHWA have identified and evaluated reasonable alternatives in direct response to the stated purpose and need for the project. The Draft SEIS indicated that the marine alternatives do meet elements of the purpose and need to varying degrees. In fact, for some individual purpose and need elements, some marine alternatives meet the purpose and need better than some of the road alternatives.

*Element 1: “Provide the capacity to meet transportation demand in the corridor.”* According to DSEIS analysis, none of the alternatives accomplishes this because “each of the JAI Project alternatives would capture only a fraction of [unconstrained] demand.”<sup>95</sup> The DSEIS differentiates between demand generated by a “hypothetical” road<sup>96</sup> from Juneau to Skagway – termed “unconstrained demand” - and demand generated by each alternative. Since all alternatives have ferry links, “none of the reasonable alternatives would generate the level of unconstrained demand.”<sup>97</sup> The DSEIS discussion then becomes irrelevant because the stated purpose and need is not about unconstrained demand but actual demand. Regarding actual demand, all alternatives meet the demand for that mode. If it were about unconstrained demand the purpose and need should read as follows: “provide capacity to meet unconstrained demand.” Yet the analysis proceeds as if this purpose and need element is indeed the case.

Since all marine alternatives are designed to “have the capacity to accommodate the

---

<sup>95</sup> DSEIS at 4-4

<sup>96</sup> DSEIS at 4-4

<sup>97</sup> DSEIS at ES-5

demand they would generate” based on assumptions of travel time and costs,<sup>98</sup> the stated purpose and need element is totally meaningless. That is, all alternatives meet the stated purpose and need regarding demand. Any statements that Alternative X only meets Y% of unconstrained demand only serves to bias the selection to a road alternative. Even though all marine alternatives “have the capacity to accommodate the demand”, using the analysis presented in the DSEIS, all marine alternatives are designed to fail because they don’t meet the restated demand, which is based on a “hypothetical” situation. This precludes the objective evaluation required by 40 CFR 1502.14(a).

“Unconstrained” or “hypothetical”<sup>99</sup> demand comes from a “what if” scenario. That is, if a road could be built to Skagway (impossible due to Section 4(f) limitations),<sup>100</sup> or a bridge could span Lynn Canal to connect Juneau with Haines (not possible due to cost and technical feasibility limitations), then huge numbers of vehicles would travel in the corridor. What follows is an irrational analysis based on a hypothetical situation having nothing to do with reality. Yet this analysis is a major basis for comparing alternatives and ultimately determining the selection of a preferred alternative that will be built in a real - rather than hypothetical - world. Even so, the DSEIS still has to reword the stated purpose and need in order to make the preferred alternative look superior. That is, instead of the stated purpose and need to “provide the capacity to meet transportation demand in the corridor” – which all alternatives meet - a rationalization for choosing Alternative 2B becomes to “generate and accommodate the greatest projected traffic demand.”<sup>101</sup> To “generate and accommodate” is *significantly different* from “provid[ing] the capacity” to meet the transportation demand. This is an example that shows how the DSEIS manipulates the purpose and need statement to reach the desired outcome of selecting 2B as the preferred alternative. We have already discussed how actual demand is being met by the AMHS.

RESPONSE: The commenter is mischaracterizing the purpose and need for the project. The Draft SEIS discussion regarding transportation demand is not irrelevant. Data have demonstrated that there is considerably higher demand for travel than is currently met by the existing transportation system. However, due to high costs, slow travel times, and other inconveniences, the system does a poor job at serving corridor demand. This is the transportation problem to be solved in this corridor—there is a much higher demand for travel than is being served because of the problems with the current ferry system. These problems are documented in Chapter 1 of the Draft SEIS.

Building a system that satisfies the greatest projected demand in consideration of the costs is not based on “irrational analysis” or a “hypothetical situation having nothing to do with reality.” The unconstrained demand is real and does exist—it is “actual demand.” Based on the population and travel characteristics of the region, the travel forecasters are able to predict what the unconstrained demand is for travel in this corridor. It is DOT&PF and

---

<sup>98</sup> DSEIS at ES-6

<sup>99</sup> DSEIS at 2-31

<sup>100</sup> DSEIS at 4-4

<sup>101</sup> DSEIS at 2-32

FHWA's responsibility as providers of the transportation infrastructure to try to make improvements on this National Highway System (NHS) route that meet the demands of the traveling public. The information provided to make this decision was prepared by specialists in travel forecasting, engineering, and economics based on real world data and accepted modeling practices.

The purpose and need statement is to provide capacity to meet transportation demand in the corridor. This has remained consistent throughout the project's development. Each of the reasonable alternatives satisfies the purpose and need to varying degrees in that they provide greater capacity than the No Action Alternative and they each have been designed to accommodate the demand that would occur given differences in attributes such as cost, travel time, and convenience. In other words, there is an underlying latent real demand for travel in the corridor (unconstrained demand) and more or less of that demand would be realized with each alternative depending on the attributes of that alternative. The Draft SEIS used the term "generate," which does not clearly communicate the situation. The phrasing "realize and accommodate" has been substituted in the Final SEIS for the phrasing "generate and accommodate" to try to clear up confusion.

DOT&PF and FHWA want to select and build a transportation solution that maximizes the number of people who will use it, while also considering costs to the State and users and balancing environmental impacts. In selecting the preferred alternative for the Draft SEIS, those alternatives that come closer to satisfying the overall unconstrained demand for travel in the corridor (i.e., that more people will use) were deemed as better fulfilling that purpose and need factor (See Chapter 1 of the Final SEIS).

All traffic demand models attempt to predict future demand based on assumptions and data available in the present. To the extent that they are predicting a future, unknown condition, all demand models are "hypothetical." The total demand model used for this project was developed based on empirical data derived from actual travel conditions observed in Alaska and Western Canada from communities with geographic characteristics similar to those in Juneau. The model starts out defining a condition that the modelers called "unconstrained demand." This level of demand predicts how many people would want to travel between Juneau and Haines/Skagway if there were a road the entire way—this is the unmet demand in the corridor. This predictive condition was based on the assumption that people in Juneau, Haines, and Skagway would exhibit similar travel patterns given the opportunity to travel by road like other similarly situated communities. This estimate defines an upper bound representing the number of trips that would occur if costs and travel times were commensurate with road travel. Based on the project team's research, there are no indicators that travel behavior in Juneau, Skagway, and Haines would differ substantially from that of other Alaskan and Canadian communities if full highway access were available. Based on the data collected, the project team is confident that Juneau residents would travel in a

similar manner to other Alaskan residents.

The forecast only used the unconstrained demand as an upper bound to bracket the overall demand in the corridor. Each forecast, for each of the alternatives, scales down from the unconstrained demand based on factors of cost, travel time, schedule convenience, etc. In other words, as costs, or travel time, or inconvenience increases, more and more people will decide not to make the trip. Using such factors to predict traveler's choices and behavior amongst competing alternatives is a common modeling practice and is used in nearly every traffic model. By factoring the demand down from the unconstrained demand based on costs, travel time, and convenience, the model predicts reasonable estimates of travel behavior based on the relative merits of the alternatives. The difference between the unconstrained demand and the demand anticipated to be achieved by each of the proposed alternatives represents unmet demand.

The purpose and need statement does not indicate that alternatives must satisfy the unconstrained demand level. As the commenter indicates, because all of the alternatives have a ferry connection, none of them reach that level. There is nothing irrational about transportation providers wanting to identify, select, and build alternatives that maximize the usefulness of the investment of the transportation facility as measured by the number of people who will use it.

More generally, the purpose of investment in public transportation infrastructure is to improve transportation opportunities for the largest number of people in the most cost-effective manner possible. It is not practical or reasonable to expect infrastructure improvements to enhance travel opportunities for all travelers, from all locations, for all travel purposes. Replacing ferry service with a highway would require a change in travel behavior for some travelers, perhaps at some increased expense and inconvenience, while a much larger number of travelers would be able to travel at lower expense and greater convenience. The ten-fold increase in traffic from No Action to Alternative 2B would be the result of lower cost and more convenient travel opportunities for a much larger segment of the region's population.

In addition to meeting demand for vehicle transportation in the corridor (because all alternatives "meet the projected traffic demand for that mode") marine alternatives also haul freight and provide transportation for walk-on passengers. This huge benefit of providing "public transportation"<sup>102</sup> is not attributed a value in the DSEIS. The DSEIS merely dismisses the benefits to walk-on passengers and freight haul in a footnote: "To compare alternatives that have both road and ferry segments, this analysis focuses on automobile capacity of the ferries. Ferries also transport walk-on passengers."<sup>103</sup> The note in the 2006 FEIS was a little more revealing: "Note: The capacity and demand analysis in

---

<sup>102</sup> DSEIS at 1-7

<sup>103</sup> DSEIS at 2-10

this document focuses on vehicles. On inter-city surface routes, the primary responsibility of the state is to provide a transportation facility and not the transportation itself. Because of the nature of the AMHS, the facilities to move vehicles also accommodate walk-on passengers. However, this is a secondary function that is not provided on other highways in the state.”<sup>104</sup> This could be a minor point if the number of passengers traveling without vehicles were small, but this is not the case. 55% of passengers travel with a vehicle and 45% do not.<sup>105</sup> A methodology that takes 45% of AMHS passengers and puts them in vehicles belonging to strangers, renders that analysis absurd.

The purpose of the DSEIS is to compare reasonable alternatives to No Action, and No Action happens to accommodate walk-on passengers and freight. The utter lack of meaningful analysis in this regard renders the DSEIS hopelessly inadequate.

RESPONSE: In meeting the demand for travel, walk-on demand and freight demand are included in the overall demand estimates and are addressed by element 1 of the purpose and need. FHWA and DOT&PF acknowledge that the highway alternatives would change an AMHS system that currently operates more like a public transportation system; however, the State’s responsibility is to provide transportation facilities, not the transportation itself.

Contrary to the commenter’s assertions that walk-on and freight analysis occurs in just one footnote, the Draft SEIS provided a full impact analysis of the highway alternatives (2B and 3) to walk-on passengers and freight movement in Sections 4.3.7 and 4.4.7 with additional details provided in Appendix EE. Moreover, walk-on passengers would be allowed on the proposed shuttle ferries under the road alternatives. However, DOT&PF and FHWA realize this use of the ferry link would no longer be as convenient and passengers that currently find it convenient to walk on would not find it so under the road alternatives. The impacts associated with these changes were analyzed and compared to Alternative 1 – No Action in those same sections.

The 45 percent walk-on rate is a result of analysis reported in 2000. From 2000 through 2015, for travel solely within Lynn Canal, pedestrians declined 26 percent and vehicles declined by 14 percent. The AMHS 2015 data suggest an annual walk-on rate of 30 percent.

Similarly, freight movements are also analyzed. Freight movement by barge or truck and ferry is largely dependent on the materials being shipped and the time-sensitivity of those materials. As noted in Section 4.3.7, for example, Alternative 2B would allow freight to move from Juneau to Haines/Skagway mostly by truck; however, truck shipments cost more per pound than barge shipments. Also, freight movement may change. Currently, shippers are able to send an unaccompanied container/van on the ferry (with no trailer or driver on the ferry). Under Alternatives 2B and 3, shippers would no longer be able continue that practice.

---

<sup>104</sup> 2006 FEIS at 1-10

<sup>105</sup> 2000 McDowell at 65

Freight via the road would have to be transported by a driver and trailer, which increases the cost of transporting freight. However, shippers would pay less in ferry fares. Shippers are expected to continue using the most cost-effective method of shipping freight in Lynn Canal. Additional information regarding impacts to freight has been added to the Final SEIS and Appendix EE.

Again, the methodology does not take AMHS passengers and put them in vehicles belonging to strangers. The analysis uses the overall number of people who travel in Lynn Canal (including all walk-on passengers) and uses known metrics of how many people travel per vehicle to compute estimates of how many vehicles would need to be accommodated in the future. DOT&PF and FHWA predict that travelers using the proposed alternatives would be in their own vehicles, and since 91 percent of Lynn Canal residents live in households with at least one vehicle, many of those travelers would use those vehicles to make the trips. The same situation occurs on all other highways in Alaska, and the road alternatives (2B and 3) are predicted to operate similarly. Additional information regarding the impacts to passengers that continue to walk on has been added to the Final SEIS and Appendix EE in the transportation impacts discussion associated with each alternative.

*Element 2: “Provide flexibility and improve opportunity for travel.”*

“All the build alternatives...would increase the opportunity for travel in Lynn Canal and would provide more flexibility for travelers.”<sup>106</sup> Therefore all build alternatives satisfy this purpose and need element. DSEIS analysis attempts to show that roads meet the objective better than marine alternatives, using a consistently biased presentation. As one example (and there are so many), the DSEIS gives the following reasons why marine options restrict flexibility and opportunity for travel:

- “Travelers must make reservations for vehicles in advance.”
- “Changing reservations can be problematic.”
- “Travelers must plan trips to coincide with ferry schedule departures and arrivals.”
- “A 1- to 2-hour check-in time is required.”
- “Trips can be delayed by unforeseen events including vessel mechanical problems, inclement weather, and last minute requests to serve an additional port south of Juneau.”
- “Reservation changes are limited to regular business hours.”
- “Border crossings are restricted at night. . .inconveniencing travelers going beyond Haines and Skagway.”
- “When ferries do not have vehicle space available, travelers may register at the ticket counter 2 hours before sailing for standby space; however, there is no guarantee of boarding.”<sup>107</sup>

If this were a fair comparison of alternatives, as required by NEPA, the DSEIS would have included similar, and sometimes identical, reasons why Alternative 2B restricts flexibility and opportunity to travel. A balanced discussion comparing the benefits of marine

---

<sup>106</sup> DSEIS ES-6

<sup>107</sup> Originally printed in the 2006 FEIS at 1-11, and included verbatim in the 2014 DSEIS

transportation with Alternative 2B could have – but did not - include the following (taken from LCC’s 2006 FEIS comments): Alternative 2B restricts flexibility and opportunity to travel because

RESPONSE: The commenter is quoting from Chapter 1 - Purpose and Need—a list of reasons that the No Action service does not offer acceptable flexibility. This is a list of problems/challenges that limit flexibility on the existing system. It is not a “comparison of alternatives” as suggested by the commenter. The Purpose and Need chapter does not compare alternatives, it serves to document the reasons for undertaking the project. DOT&PF and FHWA consider that all reasonable alternatives satisfy the purpose and need for the project to varying degrees. However, some alternatives do a better job than others.

DOT&PF and FHWA presented analysis for the pros and cons of the alternatives based on their relative merits in meeting the individual elements of the purpose and need, comprehensively meeting the purpose and need in consideration of all of its elements and in the variety of impacts discussed by the commenter. Information related to items raised by the commenter can be found in Chapter 4 of the Final SEIS under the impacts discussion for each alternative.

- “Travelers cannot make reservations for vehicles in advance.” While having to make a reservation might be a disadvantage under some circumstances, having a reservation is an advantage because it guarantees that one will indeed be able to travel. With Alternative 2B, a person can drive from Juneau to the Katzeihin ferry terminal whenever the road is not closed (and it can never be known in advance when this might occur), but because a reservation cannot be made, there is no guarantee of being accommodated. If a traveler hoped to catch the last ferry of the day and could not because it was full, travel opportunity vanishes for that day. In fact 2B would only accommodate 47% of peak week travel demand.<sup>108</sup> In this case, increased “flexibility” means travelers must be “flexible” when their traveling schedule is not accommodated, and they have to drive all the way back to Juneau.

RESPONSE: Under Alternatives 2B and 3, there would have been multiple sailings every day, giving travelers multiple opportunities to sail. Similar to today, travelers would have had to make their travel plans based upon the perceived popularity of their desired sailing. For example, if people wanted to travel on a holiday weekend, they would make their AMHS reservations further in advance, knowing that would be a popular time to travel. If the space is already sold out, they would have lost their availability to travel during that time. Similarly, under Alternatives 2B and 3, during popular travel times, people may have had to arrive early for a sailing to ensure the ferry has space for them. Under Alternatives 2B and 3, AMHS would have had the ability to increase the number of sailings to accommodate more travelers if there is sufficient demand by extending operating day and making an extra run (by paying overtime, for example). Because the shuttle ferry link is relatively short, this is

<sup>108</sup> DSEIS at 4-58

possible. With the longer ferry runs leaving from Auke Bay, it is difficult to add an additional ferry run to accommodate peak demand, because of the long sailing times.

- “Changing reservations can be problematic” under some circumstances, but not being able to make reservations can be more problematic, as discussed above.

**RESPONSE:** Under Alternatives 2B and 3, travelers would have had to adjust their travel behavior to account for not being able to make a reservation on the ferry. During peak weeks, this may have meant travelers arrive earlier than normal to ensure they were able to make a sailing. As noted above, under Alternatives 2B and 3, AMHS would have had an easier ability to increase the number of sailings to accommodate more travelers during peaks due to the short run times.

- “Travelers must plan trips to coincide with ferry schedule departures and arrivals.” This is true for all alternatives, including the preferred alternative, because all alternatives include at least one ferry segment.

**RESPONSE:** While it is true that travelers must plan their trips to coincide with the ferry schedule under all alternatives, Alternatives 2B and 3 would have provided travelers with the option of multiple sailings every day during the summer compared to other alternatives that may only have one sailing per day. If a traveler misses one sailing or it is full, they would have had to wait until the next one. With the other alternatives, travelers missing a sailing would have to wait until the next day.

- “No check-in time is required.” Walk-on passengers can walk-on and walk-off a ferry for all marine alternatives with virtually no check-in time. For marine options, travelers with vehicles who wish to chance the ferry can accommodate them can drive on the ferry at the last minute with virtually no check-in time. With Alternative 2B, travelers always take a chance the ferry cannot accommodate them. With Alternative 2B, when the ferry is full, travelers would experience a 1.5 hour wait time for the next ferry to Haines and a 2.5 hour wait time for the next ferry to Skagway, assuming there was another scheduled ferry for that day.

**RESPONSE:** By AMHS policy, walk-on passengers have the same two hour check-in time as vehicles in Juneau and one hour in Haines and Skagway. Passengers must be on board the ferry 15 minutes prior to departure. In Lynn Canal, vehicles typically check in 2 hours prior to sailing. Currently, while it may be possible for a walk-on passenger or vehicle to board a ferry with virtually no check-in time, there is the possibility that they may be denied boarding and their space given to a standby traveler. In addition, if many travelers arrive at the ferry terminal close to the sailing time, and if all late arrivals are boarded, it may result in the ferry leaving the terminal after its scheduled departure time. Alternatives 2B and 3 would still accommodate walk-on passengers just as they do today.

- “Trips can be delayed by unforeseen events, including vessel mechanical problems, and inclement weather.” Trips will be delayed when the Katzechin ferry will not be able to dock because “exposure to the west is still evident and some berthing losses can still be expected.”<sup>109</sup> These lost dockings will occur because the state decided not to invest an additional \$35 million in breakwaters.<sup>110</sup> There is no information on the number of days or dockings likely missed per year due to wind conditions. In addition to lost dockings due to wind conditions, Alternative 2B will be closed for avalanches. It is impossible to predict in advance when closures would occur. This means there would be trip delays or trip cancellations that would result in decreased flexibility and opportunity for travel. Other unforeseen events that could delay trips for Alternative 2B include poor winter driving conditions (heavy snowfall, blowing snow, glare ice, fog, etc) and closures due to clearing rock, land and debris slides from the 99 identified geological hazards, to be discussed later.

RESPONSE: During the project reconnaissance effort, engineers examined the best way to create alternatives that would function well and identified the ferry terminal locations based on such factors as depth of water, protection from large waves, ability to protect the mooring, terrain on shore for the approach roads, parking, circulation, and the operational needs of the ferry, including the length of the ferry run. Significant research was conducted on the wind and wave climatology in the Lynn Canal, as seen in the referenced study, *Lynn Canal Wind and Wave Climatology Study for Vessel Operations*. This study is based on the results of software that uses historical wind data and geographic data to forecast nearshore wave heights.

For Alternative 2B, missed ferry sailings would likely be the result of wind and wave conditions in the middle of Lynn Canal and not at the ferry terminal sites. From the current data, an assumption of one to six days of potential vessel cancellations per year can be reasonably expected.

The upper magnitude wind speeds (one minute average) in the middle of Lynn Canal in the Haines/Katzechin vicinity can vary 30 to 68 knots, causing mid-canal wave conditions that could potentially prevent ferry sailings. Based on the Glostens reports, these wind events can be expected to occur one to five percent of the time; primarily during November through February. Assuming a period of four months or 120 days for the worst weather conditions, it can be assumed that one to six days per year may be subject to weather conditions that could prevent a ferry crossing. The projected number of sailings that would be missed depends on the number of sailings per day and whether the inclement weather occurs during those sailing times.

Current data for the north and south wind directions suggests relatively low wave height (under two feet) near the Katzechin Ferry Terminal site, regardless of the magnitude of the

---

<sup>109</sup> 2005 SDEIS Appendix D, Attachment D at 6

<sup>110</sup> Id.

wind event. The Katzehin Ferry Terminal is somewhat exposed on the western side. There is no current data presented for the westerly direction. However, the fetch distance is short and wave heights should be relatively low.

While winds may be strong, causing difficulty in berthing, the ferry mooring structures at the Katzehin and Haines Ferry Terminals would not likely be significantly affected by wave and wind conditions from any direction. The ferry can safely weather storms at either port, assuming that the moored vessel is properly safeguarded and monitored during extreme storm events.

If conditions at Katzehin prevent a ferry sailing or if the road to Katzehin is closed, AMHS has the ability to use the Auke Bay Ferry Terminal if needed to minimize the disruption to travelers.

The Draft SEIS acknowledges that adverse driving conditions would occur on the East Lynn Canal Highway in the winter, but anticipates that State maintenance crews would keep the highway open under all but the most severe conditions. Such severe weather conditions may call for road closures. DOT&PF and FHWA have disclosed the impacts of potential road closures and have mitigated those effects to the extent that travel delays and closures would be minimized. Service to and from Juneau during a road closure would be provided by running a ferry in Lynn Canal. Therefore, even during road closures, the flexibility for travel under the proposed road alternatives would be at least as good as the existing service. All alternatives are forecast based on an annual average basis, and all alternatives were treated equally.

Service and cancellations on the marine alternatives can also occur, and like the road alternatives, travel times are based on the average. The Juneau Access plan provides for alternative ferry transportation between Haines, Skagway, and Juneau in the event of a road closure of more than one day. The maximum anticipated duration of any avalanche related road closure is two days. The Alaska Class Ferries would be used and have a capacity of 53 vehicles, which modeling shows to be enough capacity for the route. If during these closures, more vehicles need to be transported, then additional sailings would be made.

- “Reservation changes are not possible because there are no reservations.” For some travelers it may be a greater hardship not being able to make a reservation than having to change a reservation.

RESPONSE: See previous answer under Bullet 1 above.

- “Border crossings are restricted at night.” Since all day boat options are planned to arrive in Haines and Skagway during daylight hours, this is a non-issue for all alternatives.

RESPONSE: Border crossings are an issue for mainliner travel, and do sometimes occur at night. Mainliners are a component of Alternatives 1, 1B, and 4A through D.

- “When ferries do not have vehicle space available. . .there is no guarantee of boarding.” Alternative 2B is a first-come/first-served system, and there is never a guarantee of boarding the ferry of your choice. If there is no vehicle space available for the ferry of your choice you will have to wait for the next sailing (1.5 hours to go to Haines and 2.5 hours to go to Skagway), or the next day if the last ferry is at capacity.

RESPONSE: See previous answer under Bullets 1, 2, and 3 above.

The DSEIS also fails to evaluate the loss of flexibility and opportunity to travel in winter when driving conditions are frequently so treacherous, that even if the road were open, and one had an appropriate vehicle, many people would still find it too dangerous an harrowing to drive. Acknowledgment of this is buried in an appendix: Traffic “would probably decrease during severe conditions.”<sup>111</sup> Discussion of the dangers posed by 41 avalanches and 99 geological hazards will occur in a later section. These acknowledged dangers will decrease flexibility and opportunity to travel on Alternative 2B, but the analysis fails to account for these reasonably foreseeable events.

RESPONSE: The Draft SEIS does not fail to evaluate winter travel conditions and the consequences of those conditions. Contrary to the assertion that this discussion is buried in an appendix, relevant information can found in Sections 3.2.1.2, 4.1.6.2, 4.3.7.2, 4.3.8.2, 4.4.7.2, and 4.4.8.1 of the Draft SEIS.

The Draft SEIS acknowledges that adverse driving conditions would occur on the East Lynn Canal Highway in the winter, but anticipates that State maintenance crews would keep the highway open under all but the most severe conditions. Such severe weather conditions may call for road closure. DOT&PF and FHWA have disclosed the impacts of potential road closures and have mitigated those effects to the extent that travel delays and closures would be minimized. All alternatives are forecast based on an annual average basis, and all alternatives were treated equally. DOT&PF has committed to running ferries in Lynn Canal if the road were to be closed for extended periods. In this way, even during road closures, the proposed road alternatives would be at least as good as the existing service.

Similar arguments as those made by the commenter could be made about the primarily ferry alternatives. There are times when sea conditions cause cancellations, delays, ferry turn-arounds, and reduced ridership, and there are times when the proposed ferries would be out of service for maintenance or overhauls. The analysis does not penalize the ferry alternatives for a decrease in flexibility for such circumstances. Again, all alternatives were evaluated

---

<sup>111</sup> 2014 Appendix J at 197

equally and fairly.

*Element 3: “Reduce travel times between the communities.”*

All alternatives reduce travel times over a true No Action alternative. That is the status quo – the true No Action alternative - is the service that existed in 2014 when the DSEIS was prepared and will continue to exist in 2015 and beyond until two ACF’s come on line, namely M/V Malaspina day boat service.<sup>112</sup> ACF wait times are half Malaspina wait times. FVF travel for walk-on passengers is faster than 2B, as we discussed in our 2006 comments.<sup>113</sup> Haines/Skagway travel times nearly double in winter on 2B.<sup>114</sup> Even though this is acknowledged as fact, the DSEIS states “travel times between Haines and Skagway under Alternative 2B would remain unchanged relative to the No Action alternative.”<sup>115</sup> This statement is blatantly false for six months of the year and the analysis does not factor in these longer travel times.

RESPONSE: Alternative 1 – No Action consists of the highway and ferry transit system existing as of 2014, plus improvements programmed by DOT&PF in the Statewide Transportation Improvement Fund and the two State-funded Alaska Class Ferries currently under construction at the time of this Final SEIS, and the stated AMHS plans call for their use in Lynn Canal. Programmed improvements are described in Section 2.3.1 of the Draft SEIS. Including programmed improvements as part of Alternative 1 – No Action is common practice in preparation of EISs where the improvements are already committed; this does not violate NEPA and is consistent with FHWA policy and guidance. There is no guarantee that any AMHS asset would be deployed in Lynn Canal as service is constantly changing. However, DOT&PF and FHWA have determined that Alternative 1 – No Action described in the Draft SEIS is an appropriate representation of the State transportation system in Lynn Canal if no action were taken under the JAI Project.

Second, ferry travel times are based on AMHS experience as well as documented wait times, loading and unloading times, and AMHS policies. The times assumed in the Draft SEIS for Alternatives 2B and 3 are based on proven examples of similarly operated ferry systems that load and unload quickly, based on terminal and vessel design and drive through loading and unloading operations. The times expressed in the Draft SEIS are achievable. The operating model for Alternative 2B and 3, in particular, would be different from existing AMHS operations. No check-in would be required. Vehicles would drive straight on without turning or backing into position and would drive straight off. Such measures, coupled with simpler ticketing and security procedures, would help make loading and unloading efficient. Each of the alternatives has a ferry link and none of the alternatives' travel times were penalized for potential ferry delays.

---

<sup>112</sup> DSEIS at 3-32

<sup>113</sup> LCC 2006 comments at 5

<sup>114</sup> 2014 Appendix FF pdf page 140

<sup>115</sup> DSEIS at 4-60

Travel times (including average wait time) were computed for average operating conditions, expected to occur most of the time. AMHS has investigated means to reduce the two-hour check-in time at Auke Bay. Current Auke Bay check in times are based on requirements developed over time to make the check-in, sorting, and loading/unloading as efficient as possible for AMHS operations. Such times are necessary to deal with ticketing, reservations, and security, and to allow for sufficient loading and unloading time. Based on years of experience, AMHS has developed their check-in time into a policy to minimize delays in the operations. Cutting time out of the check-in time increases the risk of delayed departures.

Third, the citation (113) quoted is for summer operations, not winter operations. Chapter 4 in the Final SEIS has been updated to clarify the statement in Section 4.3.7.3. Also, it is important to note Haines-Skagway service is not part of the purpose and need for the JAI Project.

No speed reductions are factored in for winter driving conditions along the preferred alternative. For example, Appendix J anticipates times when only one lane of the highway would be open, necessitating flaggers,<sup>116</sup> yet no delays are attributed to this reasonably foreseeable condition. A 45 mph speed is assumed, through blowing and drifting snow, on icy roads, and for other normal northern Southeast Alaska winter driving conditions. But even during good summer weather, even though there is a plan to develop six scenic pullouts,<sup>117</sup> there is no delay factored in for people actually using them.

RESPONSE: To provide a fair comparison, travel speeds have been based on average conditions and average drivers, and have been applied consistently across all of the alternatives. Similar arguments to those made by the commenter relative to the road alternatives could also be made for the marine alternatives. Weather also affects travel speed and safety for marine vessels. Heavy seas or head winds can and do affect travel times for the vessels. For both the road and ferry alternatives, the extreme conditions are not factored into the travel times.

Of note, while pullouts are included in the proposed design for the road alternatives, they would only be used by travelers wanting to use them. These travelers have chosen to increase their trip length by stopping at a pullout. Discretionary stops by some travelers is not a valid reason to change travel time calculations.

The DSEIS assumption that half of 2B travelers would arrive at random times and half would arrive just prior to departure and therefore experience no wait time<sup>118</sup> is absurd. The only legitimate analysis would be for all travelers to arrive at random times, with some peak travel times, days, or months, having full ferries necessitating waiting for the next departure. It is no more feasible for half the ferry capacity - 26 vehicles - to arrive

---

<sup>116</sup> 2014 Appendix J at 225

<sup>117</sup> DSEIS at 4-34

<sup>118</sup> DSEIS at 4-59

exactly when the ferry leaves than it was in the 2006 analysis where all road traffic was assumed to arrive to coincide with ferry departures. Under the scenario presented, either the ferry will leave on time stranding vehicles, or it will load these last minute vehicles and be delayed. Ferry delays have implications for increasing costs and not being able to make all daily sailings, to be discussed later. An assumption that demand is evenly spread throughout the day, week and month is both unwarranted and illogical, and belied by DSEIS references to peak travel periods.

RESPONSE: It is not “absurd” to assume that half the number of passengers arrive at random times and half arrive just prior to departure. Research shows that people tend to try to minimize their wait time by consulting schedules and arriving at the selected time, particularly if the headways between sailings are frequent and departures are reliable. It would not be legitimate, based on the research, to assume that all travelers arrive at random times. The analysis assumes that the ferry would leave on time, and people would time their travel to meet the schedule. Those who time their arrival too late would be left behind. Travelers mistiming the ferry departure could occur with any of the alternatives.

The travel times are based on averages, not outliers such as people mistiming the ferry departure. Loading on the shuttle ferries would have been more efficient under Alternatives 2B and 3. The loading times were based on proven examples of similarly operated ferry systems that load and unload quickly, based on terminal and vessel design and on drive through loading and unloading operations. This makes it more likely that late arriving vehicles could have been accommodated as compared to the other alternatives.

To test the effect wait time has on demand, Fehr & Peers ran a sensitivity test, which analyzed a scenario under which ferry delays doubled for all users (except for the Haines-Skagway shuttle in Alternative 3). The analysis showed that if that were the case then Alternative 2B and 3 forecasts would decrease by around 10 percent. The actual reduction in total users would be much smaller, since there would only be a few days each year where the number of vehicles for a given sailing exceed the capacity of the ferry.

The roadway alternatives (2B and 3) would operate differently than the rest of the AMHS and would be more like the shuttle ferry to the Ketchikan airport. People would drive a longer road with a relatively short transit on the ferry (approximately 27 minutes for the Katzehin-Haines shuttle under Alternative 2B). While it is possible that a traveler could arrive at the terminal only to find the ferry had just departed or to find the ferry full and unable to take another vehicle, such scenarios are anticipated to be rare. Once a pattern was established, it would be likely that travelers would self-select to days or times anticipated to be less busy. Most of the time, space would be available. For business travelers with tight timelines and little flexibility, private air carriers are available. Even if such travelers missed their desired ferry, they would likely be able to catch the next one a short time later. Under such a scenario, the travel time (including the delay) would still be much less than under the

current system. The ferry capacities and number of sailings were calculated to provide for the projected summer average daily traffic on the road. It is anticipated that patterns would develop, travelers would learn when "rush hour" would be, and enough people would avoid those times that few would be delayed. Removing the need for a reservation system speeds up the overall travel time by removing the associated check-in process; the shuttle ferries would run frequently, thereby reducing the inconvenience.

With regard to the last sentence of the comment, the Draft SEIS assumed and presented information about summer peaks and discusses peaks during the day (e.g., the first or last ferries of the day might see higher demand). Capacity of the system is designed to accommodate demand; however, the Draft SEIS indicated that for the shuttle ferries at Katzehin, "some ferries may be at maximum capacity, resulting in travelers having to wait for the next ferry or change their preferred ferry time." This is anticipated to occur during peak times (e.g., Friday afternoon on a 3-day weekend in the summer). The Draft SEIS indicated that during peak times and for specific events, additional sailings would be provided to meet the demand. In such cases, AMHS would add ferry trips by operating on longer daily schedules.

*Element 4: "Reduce state costs for transportation in the corridor."* According to Table ES-1, Alternative 2B is **the most expensive** alternative to build. In terms of project life costs, it is the 4<sup>th</sup> most expensive to build of eight alternatives. It comes in as the third most expensive to maintain and operate and has the second worst Net Present Value.<sup>119</sup> It was determined that "none of the 'action' alternatives are worth more than they cost considering state and federal resources."<sup>120</sup> The best overall values in terms of actual expenditures are No Action followed by Alternative 4C, LCC's preferred alternative. With this rubric, Alternative 2B comes in sixth of the eight alternatives.<sup>121</sup> Life Cycle Cost is "the most practical criterion" when "it is impractical to assign dollar values to benefits."<sup>122</sup> We have already discussed the faulty methodology used to assign monetary costs and benefits, and have already discussed how no costs were assigned to known impacts of roads.

RESPONSE: DOT&PF and FHWA believe that the economic analysis presented in the SEIS is a reasonable approach for comparing the economics of the alternatives, but the economics are just one consideration among an array of others addressed qualitatively and quantitatively in the SEIS. Regarding the economic measures cited by the commenter, DOT&PF and FHWA did not identify the preferred alternative in the Draft SEIS based solely on the economic analyses, nor are they required to. The analysis indicates that none of the action alternatives shows that economic benefits outweigh costs. Alternative 2B accommodates the highest demand, provides the greatest capacity, has the shortest travel times, provides the greatest frequency of service, has the lowest cost per vehicle

---

<sup>119</sup> DSEIS Table ES - 1

<sup>120</sup> 2014 Appendix FF at v

<sup>121</sup> 2014 Appendix FF at 72, Table 22

<sup>122</sup> 2014 Appendix FF at 68

transported, and has the second lowest operations and maintenance costs of any of the build alternatives. The decision in the Draft SEIS balanced these benefits, taking into consideration the impacts described throughout the document and appendices.

The only way that 2B can be shown to “reduce” state cost is by using a cost per vehicle analysis. Data is manipulated by using a faulty “induced” forecast<sup>123</sup> (as previously discussed) that inflates the number of vehicles, which decreases costs on a per vehicle basis. In this questionable scenario, Alternative 2B barely beats out Alternatives 3 and 4D.<sup>124</sup> 2B is cost effective only when artificial “benefits” are factored in.<sup>125</sup> We have already discussed the unreasonable way “benefits” are attributed. Even if one accepts the speculative number of “induced” vehicles, and accepts the “benefits” as valid, Net Present Value is only an “optimal” choice “if there are no budgetary constraints.”<sup>126</sup> However budgetary constraints are enormous, both for State and Federal Highway funds. That is, “the federal highway trust fund is no longer sufficient to cover surface transportation needs and . . . state funding . . . is expected to decrease.”<sup>127</sup> Therefore, “judging JAI alternatives on the basis of total project life costs could be a hallmark of prudence, in terms of avoiding fiscal risks to the State.”<sup>128</sup> As stated previously, when project life costs are evaluated, the preferred alternative comes in sixth of eight alternatives. Therefore, it would be fiscally prudent to not select Alternative 2B.

RESPONSE: The reasoning behind the identification of Alternative 2B in the Draft SEIS is provided in the Executive Summary and Chapter 2 under the heading Identification of the Preferred Alternative. The selection of Alternative 2B as the preferred alternative in the Draft SEIS was not made solely on cost, although cost was a consideration. The decision was strongly based on how well the alternative satisfied the purpose and need for the project, stated in Chapter 1. As presented in Table ES-1, Alternative 2B accommodates the highest demand, provides the greatest capacity, has the shortest travel times, provides the greatest frequency of service, has the lowest cost per vehicle transported, and has the second lowest operations and maintenance costs of any of the build alternatives. The decision balanced these benefits, taking into consideration the impacts described throughout the document and appendices.

The cost analysis does not include actual, existing AMHS revenues from berths, food, or beverage sales because they would be “minor.”<sup>129</sup> However, when LCC analyzed these revenues in our 2005 SDEIS comments, we found that these “minor” revenues totaled \$863,435 in 2002, or 13.5% of total Lynn Canal AMHS revenue. Over the 30-year analysis period this would result in \$25,903,050 of additional revenue to the state that has not been

<sup>129</sup> 2014 Appendix FF at 63

included in the analysis.<sup>130</sup> Further, an assumption is made that no reservation costs will be applied for Alternative 2B. It is illogical to assume the need to take reservations on 2B is allayed by frequency of sailings, because there is a higher level of projected demand in relation to available space. The assumption that demand will be evenly distributed over the hours of the day, days of the week, and months of the season is faulty and therefore delays will occur during periods of peak demand. Either the analysis must include delays, or add in costs of the AMHS reservation system for 2B.

RESPONSE: Ferry revenues associated with stateroom and passenger services sales had not been included in the Draft SEIS User Benefit and Life Cycle Cost Analysis because those revenues are small relative to passenger and vehicle fare revenues and would not change the ranking of alternatives. However, to eliminate uncertainty around the effects of including annual stateroom and passenger services revenues, the Life Cycle Cost Analysis was revised to include estimates of those revenues.

As stated in Section 2.3.3 of the Draft SEIS, reservations will not be taken for Alternative 2B; therefore, there are not costs associated with a reservation system. Removing the need for a reservation system speeds up the overall travel time by removing the associated check-in process, the shuttle ferries will run frequently, thereby reducing the inconvenience. Systems throughout North America, and elsewhere, typically do not use reservations on short ferry links like those in Alternative 2B, including systems in Washington State and British Columbia. To test the effect that delay has on demand, Fehr & Peers ran a sensitivity test, which indicated Alternative 2B and 3 forecasts would decrease by around 10 percent if the ferry delays were to double for all users (except for the Haines-Skagway shuttle in Alternative 3). The actual reduction in total users would be much smaller, since there would only be a few days each year where the number of vehicles for a given sailing exceed the capacity of the ferry.

As with purpose and need element 1, the only way 2B reduces costs to the state is by rewriting the purpose and need element from “reduce state costs” to “have the lowest cost to the state *on a per vehicle basis.*”<sup>131</sup>

RESPONSE: The purpose and need statement has not been rewritten; it remains the same as in the 2006 FEIS. The same measures presented in Table S-1 from 2005 were repeated in Table ES-1 in the 2014 Draft SEIS, including the measure “Net State Cost Per Vehicle.” As previously discussed, all of the reasonable alternatives satisfy the purpose and need to varying degrees. Some alternatives do this better than others. DOT&PF and FHWA want to select and build a transportation solution that maximizes the number of people who would use it, while also considering costs to the state and users and balancing environmental impacts.

---

<sup>130</sup> LCC 2005 SDEIS comments at 8 and 9

<sup>131</sup> DSEIS at 2-32, emphasis added

There is nothing manipulative about transportation providers wanting to identify, select, and build alternatives that maximize the usefulness of the investment in the transportation facility as measured by the percentage of total demand accommodated. Alternative 2B, the preferred alternative in the Draft SEIS, was found to best satisfy the overall corridor demand at the lowest cost per trip. In other words, it had the best return on investment. Replacing ferry service with a highway would require a change in travel behavior for some travelers, perhaps at some increased expense and inconvenience, while a much larger number of travelers would be able to travel at lower expense and greater convenience. The ten-fold increase in traffic from No Action to Alternative 2B would be the result of lower cost and more convenient travel opportunities for a much larger segment of the region's population.

While the DSEIS relies on cost per vehicle to support its selection of 2B, the 2004 SATP recognized a cost per vehicle comparison was faulty because "it was considered to be too general and simplistic."<sup>132</sup> The SATP concluded "a breakout of the relevant cost and relevant data necessary to make an accurate comparison [between roads and ferries] is not readily available."<sup>133</sup> The assessment of "too general and simplistic" is still highly accurate.

*Element 5: "Reduce user costs for transportation in the corridor."*

In our 2005 SDEIS comments we stated "perhaps the greatest SDEIS failing is that all evaluation is based on costs and benefits for passengers traveling with vehicles,"<sup>134</sup> and true costs and benefits for walk-ons, are ignored. Under Alternative 2B the fate of 45% of AMHS passengers would be dependent upon each of them having an available, reliable vehicle<sup>135</sup>, or a bus service that may or may not materialize from the private sector. Cost for hypothetical bus service is estimated to range from \$40 to 60 one way.<sup>136</sup> Adding the anticipated \$3.85 Haines-Katzehin passenger shuttle fare<sup>137</sup> to the bus fare, it would cost a walk-on passenger between \$43.85 and \$63.85 one way. The current AMHS fare for a Haines/Juneau walk-on is \$37 (and cheaper for seniors and students). Therefore, for 45% of current users, Alternative 2B would **increase** out-of-pocket expenses by \$6.85 to \$26.85 each way. This is a **19 to 73% fare increase** over the No Action Alternative (and even greater for seniors and students). Since bus service is not guaranteed the only other option is to fly which would about quadruple the expense for walk-on passengers.<sup>138</sup> While this reality is acknowledged in the DSEIS: walk-ons "would be forced to rent vehicles, take a commuter flight, or travel on private carriers" should they develop,<sup>139</sup> these anticipated additional costs for walk-ons are not figure into the analysis, rendering that analysis invalid.

<sup>135</sup> The decision to dismantle a functioning public transportation system brings into question EO 12898 and how low income households may be disproportionately impacted has not been adequately addressed.

<sup>136</sup> 2014 Appendix EE at 129

<sup>137</sup> 2005 Appendix W at 181

<sup>138</sup> DSEIS at 1-18

<sup>139</sup> DSEIS at 4-64

RESPONSE: The 45 percent walk-on rate used by the commenter is likely sourced to analysis by the McDowell Group reported in 2000. Based on AMHS information, DOT&PF believes the current percentage of walk-on passengers to be closer to 30 percent, as the number of people walking on the ferry has declined over the past 15 years. Under Alternative 2B, a substantial segment of current walk-on traffic would be expected to convert to personal vehicle travel because of the convenience and reduced cost to do so. With implementation of Alternative 2B, the percentage of walk-on travel is anticipated to drop to 3 percent of the overall travel.

DOT&PF and FHWA have evaluated the impacts to walk-on passengers and reported those in the Draft SEIS, including out-of-pocket user costs. DOT&PF and FHWA find it likely (according to interviews with transit providers) that bus service would develop if there is sufficient demand and it is profitable to do so. DOT&PF and FHWA recognize that 91 percent of the households in Lynn Canal communities own vehicles. Many current walk-on passengers who own vehicles would likely choose to travel by car if a highway were available in the Lynn Canal corridor. The Draft SEIS described the impacts to those travelers who would choose to walk on. DOT&PF is not making an assumption that private bus service will be available. The Draft SEIS indicated that a private ground transportation provider would be anticipated to offer service to the Katzechin Ferry Terminal if demand develops and it is shown to be profitable.

Information presented in the Draft SEIS illustrates user prices for a family of four as an example of the fare structure. Based on this comment and others, additional information about the anticipated fares for an adult ferry passenger and a 19-foot vehicle have been added to Chapter 2 of the Final SEIS. Chapter 4 of the Final SEIS has been updated to compare the total user cost and total out-of-pocket user cost for a family of four in a 19-foot vehicle, a driver with a 19-foot vehicle, and a walk-on passenger.

DOT bases its entire cost analysis on a hypothetical family of 4, even though the actual average household sizes are 2.6 people in Juneau, 3.4 people in Haines, and 2.5 people in Skagway.<sup>140</sup> Even though statistics from the border stations show that there is an average of 2.3 individuals per vehicle.<sup>141</sup> Even though the average AMHS itinerary is 2.5.<sup>142</sup> Instead of using actual data to determine user costs, an inflated and mythical 4 people per vehicle biases the cost per trip data. This is one more example of how the DSEIS uses hypothetical situations when it has actual data that could more accurately represent reality. This hypothetical situation overstates user costs except when vehicles carry more than 4 passengers. Since most vehicles carry less than 4 passengers, the analysis is clearly skewed.

---

<sup>140</sup> DSEIS at 3-21, 3-24, 3-26

<sup>141</sup> DSEIS at 4-45

<sup>142</sup> 2014 Appendix CC at 19

RESPONSE: DOT&PF did not base the cost analysis on a hypothetical family of four. Fares reported in the Draft SEIS that reference a family of four were included only as an example. User costs were calculated for all users, not just a “hypothetical family of four.” To help clarify, additional information about the anticipated total user cost and total out-of-pocket user cost for the various travel markets (walk-on passengers, drivers with a 19-foot vehicle, and a family of four with a 19-foot vehicle) has been added to the Final SEIS. The commenter’s assertion that actual data was not used or that inflated or mythical information was used is false. Fares for the ferry alternatives are based on actual AMHS data. For shuttle ferry runs using drive through loading and unloading procedures, data from Washington State and Vancouver, B.C. was extrapolated for Alternatives 2B and 3. The methodology and data for calculating fares is fully disclosed in Appendix AA.

Lastly, user costs not only include out-of-pocket expenses, but “costs of time.”<sup>143</sup> User “costs” for road alternatives “are less than any marine alternative...mainly because of the inclusion of time as a user cost.”<sup>144</sup> We have already shown that ferry passengers value their time spent on the ferry. The methodology used charges a cost for what is actually a benefit, biasing the comparison of alternatives, rendering the analysis invalid under NEPA standards.

RESPONSE: As previously discussed, people value travel times differently based on various factors: work versus pleasure, weather conditions, etc. Comparing the choice model coefficients, ferry travel time is not as onerous as automobile travel time. The model gave 20 percent less weight to the ferry travel time compared to automobile travel time. This relationship was derived from other regions that have ferry service and driving options and was used to validate the travel model results to existing ferry demands within the corridor.

## **Alternatives**

Providing an adequate range of alternatives is “the heart of the environmental impact statement.”<sup>145</sup> Not only does the DSEIS fail to include a range of alternatives that sharply define the issues and provide a clear basis for choice among options, but the alternatives identified are neither “objectively evaluated,” nor “rigorously explore[d].”<sup>146</sup> The preferred alternative is presented in the best light using a “best case” scenario, and marine alternatives are presented in the worst light using “worst case” scenarios. We have already provided many examples of this bias.

RESPONSE: The range of alternatives presented in the Draft SEIS is adequate and have been objectively evaluated and rigorously explored. The range of alternatives included various lengths of road and ferry connections and different types of ferries used in those connections to improve surface transportation between Juneau and Haines/Skagway. Also included is an alternative that would enhance service using existing AMHS assets.

---

<sup>143</sup> 2014 Appendix FF at iv

<sup>144</sup> 2014 Appendix FF at 79

<sup>145</sup> 40 CFR 1502.14

<sup>146</sup> 40 CFR 1502.14(a)

In response to comments on the Draft SEIS, FHWA and DOT&PF have investigated variations on the alternatives suggested in comments on the Final SEIS and presented that analysis in Section 2.2 and Appendices CC and II of the Final SEIS.

Alternative 2B was not presented using a “best case” scenario, nor were the marine alternatives presented using “worst case” information. All of the alternatives carried through the environmental analysis have been evaluated and presented to a comparable and appropriate level of detail for making an informed decision. The ability of each alternative to meet the purpose and need of the project has been quantified. The Draft SEIS reported the nature and magnitude of the environmental impacts of each project alternative without bias. More detail is available for Alternative 2B because it was the selected alternative in the 2006 ROD and moved forward to permitting and design. To not include the relevant information obtained for that corridor in years following the 2006 ROD would be disingenuous; however, to bring all alternatives to the same level information is not reasonable or necessary.

### ***No Action***

A true No Action alternative would describe the current system so that proposed changes can be measured and evaluated. “The ‘no action’ alternative may be thought of in terms of continuing with the present course of action until that action is changed.”<sup>147</sup> Also, “CEQ regulations allow the status quo to properly be the no action alternative.”<sup>148</sup> An EIS has been found to violate NEPA if it does not include a valid no action alternative.<sup>149</sup> Yet the no action alternative presented in the DSEIS includes assets “that have not yet been constructed” as of DSEIS printing.<sup>150</sup> The no action alternative “is not a direct continuation of the 2013-2014 ferry service” but the AMHS “current plan” that “reflects the *most likely* AMHS operations.”<sup>151</sup> Not only is there no guarantee that assets would be deployed as planned, this alternative cannot be actualized until the ACF ferries come on line, one in 2016 and the second in 2017.<sup>152</sup>

The record shows the AMHS has had many plans that were not actualized. For example, the 2004 SATP “planned” for the M/V Aurora to operate as the Haines/Skagway shuttle in 2005.<sup>153</sup> In 2006, AMHS “planned” for the Aurora to begin shuttle service in 2007.<sup>154</sup> But the Aurora has yet to serve in that capacity in the Lynn Canal. Similarly, the M/V Fairweather “was designed and sized to provide daily same-time-of-day service between Auke Bay and Sitka”<sup>155</sup> but it was instead deployed in the Lynn Canal in 2004 and 2005.<sup>156</sup> Initially the AMHS “plan” for the ACF shuttle was for a 350-foot vessel.<sup>157</sup> But the Governor instead declared in December of 2012 that the state would build two smaller

<sup>154</sup> Id.

<sup>155</sup> 2014 Appendix CC at 9

<sup>156</sup> DSEIS at Table 1-1

<sup>157</sup> DSEIS at 2-5

boats.<sup>158</sup> Further, “typically AMHS operational changes occur at the discretion of the AMHS from season to season.”<sup>159</sup> These examples illustrate that AMHS plans don’t necessarily become actualized. To base a No Action alternative on a plan that may or may not happen, where changes can be made from “season to season” at the “discretion of the AMHS” plays fast and loose with NEPA No Action requirements.

RESPONSE: The No Action Alternative is a continuation of the AMHS’s policies and reflects the most likely AMHS operations in the absence of any capital improvements specific to the JAI Project. The No Action alternative consists of the highway and ferry system assets existing as of year 2014 plus improvements programmed by DOT&PF in the Statewide Transportation Improvement Program (STIP), and the two State funded ACFs currently under construction at the time of this Final SEIS. Programmed improvements are described in Section 2.3.1 of the Draft SEIS. Including programmed improvements as part of a No Action alternative is appropriate practice for preparation of an EIS where these improvements are already committed. To illustrate the identification of the No Action (or No Build) alternative, some guidance from FTA may illuminate the discussion (FTA routinely deals with public transit vehicles which are analogous to ferries):

*“The No-Build alternative provides the baseline for establishing the environmental impacts of the alternatives, the financial condition of the transit operator, and the cost-effectiveness of the TSM alternative. It also establishes much of the information needed for the DEIS Chapter 1 on Purpose and Need since it examines horizon year travel demand and its impact on a largely unimproved transportation system. This alternative is defined to include those transportation facilities and services that are likely to exist in the forecast year. All elements of the No-Build alternative must be part of each of the other alternatives except where an alternative replaces services or facilities inside the corridor.*

*To provide a basis of comparison in the Draft SEIS that preserves the NEPA requirements to evaluate all federal actions with a significant potential impact on the social, economic or physical environment, the No-Build alternative must include the following features:*

- *The maintenance of existing facilities and services in the study corridor and region;*
- *The completion and maintenance of committed projects in the study corridor that have successfully completed their environmental review; and*
- *The continuation of existing transportation policies.*

*Within these guidelines, there are two possible definitions of the No-Build option outside the study corridor. Choice among these is determined by the local situation, particularly the degree of certainty that other transportation improvements will be made between now and the horizon year. The possible definitions include:*

---

<sup>158</sup> DSEIS at 2-7

<sup>159</sup> DSEIS at 2-5

1. *An alternative that incorporates “planned” improvements that are included in the fiscally constrained long-range plan for which need, commitment, financing, and public and political support are identified and may reasonably be expected to be implemented.*
2. *A conservative definition that adds only “committed” improvements – typically those in the annual element of the Transportation Improvement Program or local capital programs – together with minor transit service expansions and/or adjustments that reflect a continuation of existing service policies into newly developed areas. In some metropolitan areas with severe financial constraints, this definition may involve no improvements to transportation facilities or transit services in the corridor beyond routine maintenance and replacement.*

*The first definition is the typical definition of the No-Build alternative, but it does entail some risk in that the inclusion of “planned” improvements may lead to a set of alternatives that incorporate projects that may not happen. The second option recognizes whatever improvements are essentially certain to occur because they are simply incremental responses to growth in the corridor and have been programmed by the region.”*

From: [http://www.fta.dot.gov/12304\\_9717.html#251\\_The\\_No-Build\\_Alternative](http://www.fta.dot.gov/12304_9717.html#251_The_No-Build_Alternative)

DOT&PF and FHWA’s definition of Alternative 1 – No Action reflects the more conservative approach described in #2 above. It includes only committed improvements and reflects a continuation of existing service policies (e.g., check-in times, reservations). The Day Boat ACFs are currently under construction at the time of this Final SEIS. Similarly, the Haines Ferry Terminal improvements are also slated for construction in 2019.

Additionally, there is no guarantee that the ACF’s will indeed be deployed in the Lynn Canal. The DSEIS admits that “the ACF program was made to develop vessels that better meet AMHS needs in Southeast Alaska and was a state action independent from the JAI project.”<sup>160</sup> It is illogical for a project that is stated to be independent from JAI, and not expected to come online until 2016 and 2017 to be the No Action alternative for a 2014 DSEIS. In fact, in a 2013 ACF study commissioned by DOT, the first priority use of the ACF’s is for the Juneau/Haines and Juneau/Skagway routes, i.e., Alternatives 4C and D. The second priority routing is for other AMHS established routes from Juneau to Angoon, Gustavus, Hoonah, and Tenakee; or from Ketchikan to Metlekatla. The third priority routing is to function as the Katzehin shuttle for Alternative 2B.<sup>161</sup> The decision to make ferries that don’t yet exist, and may be deployed elsewhere, the No Action alternative is arbitrary and capricious.

**RESPONSE:** As indicated in this comment, the intention of the committed to and

---

<sup>160</sup> DSEIS at 2-7

<sup>161</sup> Draft Design Concept for Day Boat ACF, 2/25/13, at 9

programmed ACF vessels is to provide service in Lynn Canal. In keeping with common practice, programmed improvements have been included in the Draft SEIS and the known/planned information has been incorporated. All alternatives are compared fairly and equally against this alternative. The planned priority for the Day Boat ACFs is on the Juneau-Haines and Haines-Skagway routes. The decision to include committed, programmed ferries, and their planned operation, is in keeping with common practice as evidenced by FTA guidance (see [http://www.fta.dot.gov/12304\\_9717.html#251\\_The\\_No-Build\\_Alternative](http://www.fta.dot.gov/12304_9717.html#251_The_No-Build_Alternative) ).

Current, existing operational AMHS Lynn Canal service consists of the M/V Malaspina day boat and mainline service.<sup>162</sup> This true No Action alternative is described as such in the 2006 Juneau Access Record of Decision.<sup>163</sup> Since the first ACF is not scheduled to be completed until 2016, the Malaspina will provide Lynn Canal day boat service in 2015. This existing service can and should provide the baseline for comparing alternatives. The DSEIS uses the concepts of “existing” conditions and the need for a “baseline” in the context of evaluating the affected environment.<sup>164</sup> It also should have applied these same concepts of “existing” and “baseline” when identifying the No Action alternative. In fact, tables in Appendix FF compare existing service with the chosen No Action alternative and these tables show differences in AADT, passenger capacity, ferry travel times, ferry delay times, loading times, percentages of traffic routed through Haines and Skagway, etc.<sup>165</sup> The information in these tables was used to ascertain user costs as compared to No Action, but by not having a proper No Action alternative, user costs are inaccurately portrayed. As another example, the selected No Action alternative would provide 50% more summer service between Haines and Skagway than existing service.<sup>166</sup> Further, the selected No Action alternative would reduce state costs from “actual 2013 costs” for existing Malaspina day boat service.<sup>167</sup> Therefore, the DSEIS statement that No Action would not change the capacity or operations<sup>168</sup> is blatantly false. That is, the real No Action alternative has a 167-vehicle capacity<sup>169</sup> where the DSEIS No Action alternative has a daily capacity of 93.<sup>170</sup> In contrast, the ACF No Action alternative can only provide hypothetical data since these vessels have yet to be built and therefore have not been tested. The DSEIS No Action alternative is a planned outcome that may change, rather than the existing on-the-water reality. Absent a valid No Action alternative, a true comparison of alternatives becomes impossible and the DSEIS violates the “heart” of NEPA.

RESPONSE: Tables cited in Appendix FF and elsewhere show existing conditions compared to Alternative 1 – No Action because they are different. As is already explained, it is common, accepted, and even recommended practice to include committed improvements

<sup>168</sup> DSEIS at 4-14

<sup>169</sup> 2006 ROD at 5

<sup>170</sup>

in the transportation system as part of Alternative 1 – No Action. Presenting such information does not mean user costs or other metrics are “inaccurately portrayed.” In fact, including the committed Day Boat ACFs makes Alternative 1 – No Action more accurate, as these committed vessels **are being** built and **will be** operating in Lynn Canal.

As indicated in this comment, the intention of the ACF vessels is to provide service in Lynn Canal. In keeping with common practice, programmed improvements were included in the Draft SEIS and the known/planned information has been incorporated, and all alternatives are compared fairly and equally against this alternative. Because the programmed improvements already represent improvements to the Lynn Canal corridor, if anything, including the programmed ACFs tends to downplay the project purpose and need. Moreover, the benefits of each of the alternatives are less apparent, when compared to Alternative 1 – No Action with the programmed improvements. The decision to include committed, programmed ferries is in keeping with common practice as evidenced by FTA guidance (see [http://www.fta.dot.gov/12304\\_9717.html#251](http://www.fta.dot.gov/12304_9717.html#251) The No-Build Alternative ).

The Draft SEIS at page 4-14 does not make the statement that the “No Action Alternative would not change the capacity or operations.” The Draft SEIS fully discloses that Alternative 1 – No Action represents the Lynn Canal Service in place as of 2014, but incorporates the programmed Day Boat ACFs. As is standard practice, demand and capacity, and operations of that system (with the programmed changes), is carried forward out to the forecast year for the SEIS (in this case, 2055).

Citing a no action capacity from the 2006 ROD (footnote 168) is inaccurate. The capacity of the system in 2006 does not reflect the changes that occurred from 2006 to 2014, (including the commitment by the State to add Day Boat ACFs into Lynn Canal).

The assertion that Alternative 1 – No Action can only provide “hypothetical data” is without merit. Engineering information (e.g., costs, travel speeds, capacity) and travel forecasting information developed for all of the alternatives are based on the best available information and professional engineering. The information provided for Alternative 1 – No Action is not different. In fact, every EIS evaluates alternatives based on future conditions, and therefore must make similar engineering and forecasting judgments about build and no build alternatives and the resulting effects.

The commenter has reported the Lynn Canal capacity incorrectly at footnote 170 (the commenter has only presented Auke Bay-Haines capacity, excluding Auke-Bay-Skagway Capacity). The actual Lynn Canal capacity for Alternative 1 – No Action is 154 vehicles in summer.

### ***Alternative 1B***

Alternative 1B is court-ordered. The 9<sup>th</sup> Circuit ruled that DOT “could make more efficient use of assets it currently owns.”<sup>171</sup> Unfortunately, this is not the case for 1B. 1B retains two ACF ferries and adds the Malaspina. This is a change from the 2012 scoping alternative 1B where use of the Fairweather was “deemed reasonable” and appropriate.<sup>172</sup> Scoping comments were favorable.<sup>173</sup> But then the Governor reduced the size of the ACF, and Fairweather engines were replaced, making it not possible for the Fairweather to make one round trip between Juneau and Haines and one round trip between Juneau and Skagway in 12 hours.<sup>174</sup>

What is not analyzed is whether the Fairweather is able to make two roundtrips between Haines and Juneau daily, because this routing is shorter. This would leave one ACF for the Juneau/Skagway roundtrip, and one ACF for the Haines/Skagway shuttle. Since reducing travel time is a stated purpose and need, and also one objective for developing Alternative 1B,<sup>175</sup> retaining some level of available fast ferry service would be reasonable and prudent, particularly since this was the alternative presented during the public review process.

RESPONSE: The 9<sup>th</sup> Circuit ruled that DOT&PF and FHWA **must evaluate** an alternative that makes improvements using existing assets. FHWA and DOT&PF disagree that Alternative 1B does not make more efficient use of the use of assets it currently owns. Alternative 1B demonstrates an improved condition in comparison to Alternative 1 – No Action.

DOT&PF and FHWA have provided full disclosure in Appendix CC of the process and reasoning that went into developing Alternative 1B. The dismissal of the Fast Vehicle Ferry (FVF) *Fairweather* as an asset available for service in Lynn Canal is explained in the appendix. In March 2013, litigation regarding recurrent problems with the engines of the *FVF Fairweather* and *FVF Chenega* was resolved. Essentially, the engines were not designed to run at the speeds needed to make two daily round trips between Juneau and Haines/Skagway in a 12-hour window. Without modification of the Skagway Ferry Terminal allowing for drive through loading and unloading, the ACF cannot be reasonably scheduled daily for the Juneau/Skagway leg due to the 12-hour operation rule. With the two ACFs available for Lynn Canal, there are other routes that need the speed of the FVF.

Instead, the Malaspina is deployed in 1B, and it is deployed from Skagway. The Malaspina has greater vehicle capacity than the ACF (88 versus 53)<sup>176</sup> giving Skagway a summer capacity of 201 vehicles per day versus 129 for Haines.<sup>177</sup> Yet historic data shows that 60%

---

<sup>171</sup> 2014 Appendix CC at 3

<sup>172</sup> 2014 Appendix CC at 9

<sup>173</sup> Id at 13

<sup>174</sup> DSEIS at 2-7

<sup>175</sup> DSEIS at 2-7

<sup>176</sup> DSEIS at 2-12 and 13

<sup>177</sup> Id at 2-13

of Lynn Canal traffic goes to Haines and 40% to Skagway.<sup>178</sup> Deploying the *Malaspina* in Skagway when Haines has a greater volume of traffic, is the antithesis of “making more efficient use of assets.” In addition to putting the greater capacity vessel in the smaller demand port of Skagway, the *Malaspina* adds significantly more total capacity than demand,<sup>179</sup> and is therefore obviously the wrong vessel for the court ordered alternative. This is admitted, in an appendix, which states that the *Malaspina* is not a good “match” for 1B and a Taku-sized vessel would be a “better match.”<sup>180</sup> “The *Malaspina* is larger than required” for both summer 1B service and winter mainline service and therefore 1B is designed to have excess capacity.<sup>181</sup> With no assessment given for the Prince Rupert demand, it is not possible to determine that the Taku could not be deployed in 1B, since the *Matanuska* would still be available for that service.

RESPONSE: The rationale for the selection of the *M/V Malaspina* is described in Appendix CC – *Development of Alternative 1B*. Note that the *M/V Taku* is not available, as it has been retired and sold. The Final SEIS does indicate the *M/V Malaspina* is oversized for the Lynn Canal summer service; however, given AMHS’s mission and available vessels, the *M/V Malaspina* continues to be the preferred choice for Alternative 1B. The routing of the *M/V Malaspina* in the Final SEIS demonstrates the flexibility of deploying the vessel to meet demand in Lynn Canal.

The 1B alternative developed by DOT does not withstand scrutiny in the context of designing marine portions that best meet purpose and need “while not inflating costs.”<sup>182</sup> Alternative 1B is designed to increase costs to the state with no resulting appreciable increase in ridership. That is, 1B calls for reducing fares by 20% and increasing call center hours.<sup>183</sup> But information provided in the DSEIS appendices shows that both of these actions have been ineffective in increasing ridership. Namely, “additional staffing and longer [call center] hours would have little benefit in improving ridership.”<sup>184</sup> This is particularly true today when more people are booking on-line than at the call center, which accounts for only 25% of bookings.<sup>185</sup> AMHS managers corroborated there was no net benefit gained from increasing call center hours until 9 pm when this was tried before.<sup>186</sup> Increasing call center hours will cost \$125,000 annually for only one benefit – call-waiting time would decrease from the terribly inconvenient averages of 76 seconds in 2011 and 71 seconds in 2012.<sup>187</sup> In other words, no benefit at all.

RESPONSE: It is not possible to meet all purpose and need factors using only existing

assets. Adding capacity or speed increases cost. Passing those costs on to travelers reduces demand and increase user costs. DOT&PF and FHWA have endeavored to develop the best alternative they can using only existing assets. The fact remains that increasing capacity or travel speed costs more. DOT&PF and FHWA considered fare reductions and enhancements in the call center because the plaintiffs in the 2006 lawsuit suggested those very kinds of improvements were needed to help maximize ridership. These considerations were evaluated and included only to the extent they made Alternative 1B more competitive.

The statement that reducing fares is ineffective is incorrect. DOT&PF and FHWA commissioned studies to determine the effects of fare reductions and based Alternative 1B's fare reduction on the results of that analysis. The analysis is documented in the attachments to Appendix CC (*Estimated Ferry Travel on Internal Lynn Canal Links with Price Reductions*, by Northern Economics and *Estimated Ferry Draft JAI Alternative 1B Fare Sensitivity Analysis* by Fehr & Peers).

Study results on the elasticities for passenger vehicles for both the Juneau-Haines and Juneau-Skagway runs identify elasticities that are in the -1.2 to -1.3 range. Elasticity is a measure of how demand will change given a change in price. These elasticity coefficients imply that if fares for passenger vehicles are lowered by a marginal amount, the number of cars using the ferry will increase by percentages that are greater than the percentage decrease in prices. For example, if ferry fares drop by 10%, the number of vehicles that use the ferry will go up more than 10%.

In the travel forecasting completed for the project, Fehr & Peers developed a travel forecasting model that includes price sensitivity. To examine the potential effect that changes in fare would have on future travel volumes, Fehr & Peers ran sensitivity tests of varying price reductions to examine anticipated future change in demand for Alternative 1B. The fare reduction percentage was varied to test the sensitivity of the ridership demand in the forecasting model to changes in fare. The results from the ridership forecasting model show that each 10 percent reduction in fares would result in approximately 15 additional vehicles during an average summer day in 2050 (the JAI Project Draft SEIS design year).

As stated in the updated 2017 Appendix CC, *Development of Alternative 1B – Enhanced Service with Existing Alaska Marine Highway System (AMHS) Assets*, in Section 4.3.2 Reservation Enhancements, “Since the Draft SEIS was published, AMHS replaced the 15-year-old reservation system with a new automated system and enhanced their reservation website to make it easier to use.” “The number of calls the reservation call center is receiving is declining, in part due to the increased usage of AMHS’s enhanced reservation website. With declining call center usage, extending the call center hours of operation would do little to increase ridership or improve customer service; however, it would increase the cost of AMHS operations. As a result, DOT&PF has determined that **extending the call center hours for improved customer service is no longer considered**

**reasonable for inclusion in Alternative 1B.”**

Additionally, airlines have stopped providing free reservation service for many years and as a result the public books on-line, or pays additional fees for reservation services. AMHS costs for the call center are part of operating costs subsidized by the state. Instituting a user-pay charge for call center bookings would be a better way to address state AMHS subsidies than building a half-billion dollar road to nowhere.

The other “transportation system management” technique employed in 1B is to decrease fares by 20% in the hopes of enticing more ridership to increase revenues. Yet in real AMHS trials, price reductions of 10% and 30%, and driver goes free incentives resulted in small increases in ridership that “did not offset the loss in revenues” causing both programs to be discontinued.<sup>188</sup> In addition to the real world trial cited above, a ridership forecast model predicts a similar outcome.<sup>189</sup> Decreasing AMHS fares for Alternative 1B only serves to increase project costs.<sup>190</sup> More precisely, adding the Malaspina is predicted to increase Lynn Canal revenues by \$.5 million at an additional state cost of \$8.2 million.<sup>191</sup> In short, this is a poor excuse for a TSM alternative and fails to address the purpose and need of reducing state costs.

RESPONSE: DOT&PF and FHWA considered fare reductions and enhancements in the call center because the plaintiffs in the 2006 lawsuit suggested those very kinds of improvements were needed to help maximize ridership. These considerations were evaluated and included only to the extent they made Alternative 1B more competitive.

The commenter incorrectly indicates Alternative 1B would not produce desirable results. What Appendix CC (at page 25) actually states is as follows: Project economists indicated that “fare elasticities are predictive at the margin, for modest changes in price (estimated by project economists as being up to 20% for this project).” The economists warned that “beyond marginal changes in prices, the uncertainty in the results increases.” The report goes on to indicate that a reduction in fares could potentially increase ridership, but the increases are not substantial and a fare reduction would be subject to the risk of lost revenue if not realized.” Based on these recommendations, “DOT&PF determined that a 20-percent reduction in fares in Lynn Canal would be reasonable to include as a component of Alternative 1B given the potential effect on ridership and revenue.”

Moreover, as described in the comment above, traffic modeling sensitivity runs determined that each 10 percent reduction in fares would result in approximately 15 additional vehicles during an average summer day in 2050. With a 20 percent reduction in fares, that equates to 30 vehicles. Given that the 2050 travel forecast for an average summer day was predicted to

---

<sup>188</sup> 2014 Appendix CC at 25

<sup>189</sup> Id.

<sup>190</sup> 2014 Appendix FF at 20

<sup>191</sup> DSEIS at 4-30

be 50 vehicles greater under Alternative 1B as compared to Alternative 1 – No Action, the price reduction is roughly responsible for 60 percent of that difference.

A true TSM alternative would include options that maximize efficiency of the existing system with little or no new construction.<sup>192</sup> A better TSM alternative would have been to use the Fairweather on a twice-daily Haines/Juneau route, to use one ACF for the Skagway/Juneau route, and build the optimum vessel for Haines/Skogway traffic, estimated to cost \$22.3 million.<sup>193</sup>

RESPONSE: An SEIS prepared under NEPA is meant to analyze a range of reasonable alternatives representing the full spectrum of alternatives. Where there are virtually an infinite number of possibilities, it is not necessary to evaluate them all. The court ruling on the previous EIS required an alternative that used existing assets (without up-front capital costs, which plaintiffs argued had unfairly skewed the cost analysis of the ferry alternatives). Alternative 1B was created in response and was evaluated as a competing alternative to solve the problems expressed in the purpose and need statement in Chapter 1.

While NEPA requires that an EIS evaluate a full range of alternatives, it does not require an EIS to examine every possible variation in a theoretically infinite set of variations. That said, DOT&PF and FHWA have examined suggestions to "optimize" Alternative 1B, and discussion of the results are included in Appendix CC of the Draft and Final SEIS and Appendix II of the Final SEIS.

The alternative suggested here is not reasonable. The Day Boat ACF cannot make a round trip between Auke Bay and Skagway and comply with U.S. Coast Guard regulations. The reasons for not selecting the *FVF Fairweather* are explained in Appendix CC.

Unfortunately Alternative 1B was presented to the marine consultant Coastwise as-is. Coastwise therefore did not look for or evaluate a better option.<sup>194</sup> That is, if the state were to make a good faith effort to comply with the court order, it would have been reasonable for it to ask its selected marine expert how best to configure a true TSM alternative.

RESPONSE: Alternative 1B was developed by AMHS and other DOT&PF professionals with years of optimization experience. They were able to develop a system management alternative that makes improvements over and above Alternative 1 – No Action without jeopardizing service elsewhere. AMHS staff have considerably more experience with running and optimizing the existing AMHS service than Coastwise. Coastwise Corporation is a naval architecture and marine engineering firm offering primarily vessel design, marine structural and systems analysis, and port engineering services. Alternative 1B is a “good-

---

<sup>192</sup> LCC 2005 DSEIS comments p10 referencing 2005 SDEIS at 2-7

<sup>193</sup> 2014 Appendix GG at 36

<sup>194</sup> 2014 Appendix GG at 5

faith effort.” It results in an increase in AMHS service in Lynn Canal that would not require a reduction in service outside Lynn Canal.

## Environmental Consequences

### ***Alternative 2B***

Alternative 2B has the **most environmental impacts of any alternative**, as shown in Table ES-1. These impacts include the largest loss of old-growth forest habitat, largest loss of wetland habitat, largest loss of intertidal/subtidal areas, most area of essential fish habitat impacted, and most impacts to eagle nests. In 2005, the US Fish and Wildlife Service expressed concerns that all East Lynn Canal road options “would impact the **most productive and sensitive** habitats, such as the major estuaries and inland habitats at the head of Berners Bay. . . .These areas support **diverse and very high quality** fish and wildlife habitats.”<sup>195</sup> In 1997 the EPA noted that Berners Bay “is the area within the project corridor that has the **highest resource and recreational value**, and the area **most vulnerable** to impacts.”<sup>196</sup>

Areas important to migrating waterfowl will also be adversely impacted by 2B. The Juneau Fish and Wildlife Field Office states: “Alternative 2B would impact the most productive and sensitive habitats, such as the major estuaries and inland habitats at the head of Berners Bay (confluence of the Antler, Lace and Berners rivers), and the Katzechin River delta.”<sup>197</sup> The Katzechin River delta has high habitat values, particularly an estuarine beach bar of 1.87 acres.<sup>198</sup> 85% of this area will be lost when the Katzechin ferry terminal is build.<sup>199</sup> While the 2006 FEIS states that 2B highway alignment has been adjusted to avoid salt marsh and open water to minimize disturbance to migrating waterfowl,<sup>200</sup> nowhere is ease of human access to the Katzechin River delta evaluated for negative impacts to migrating waterfowl, as a result of selecting 2B.

RESPONSE: Per your comment, Section 4.3.15 of the Final SEIS includes an evaluation of the impacts from human access on the Katzechin River delta and associated wildlife, specifically waterfowl.

### Purpose and Need

The DSEIS rewords the stated purpose and need in order to make Alternative 2B appear to be the best alternative. That is, instead of the stated purpose and need to “provide the capacity to meet transportation demand in the corridor” – which all alternatives meet as previously discussed - a rationalization for choosing Alternative 2B becomes to “generate and accommodate the greatest projected traffic demand.”<sup>201</sup> To “generate and accommodate” is *significantly different* from “provid[ing] the capacity” to meet

<sup>195</sup> 2005 SDEIS at 7-66, emphasis added

<sup>196</sup> 1997 EPA comments at 9, emphasis added

<sup>197</sup> 2006 FEIS at 7-133

<sup>198</sup> 2006 Appendix W at 250

<sup>199</sup> Id.

<sup>200</sup> 2006 Appendix Y at 190

<sup>201</sup> DSEIS at 2-32

transportation demand. The purpose and need of providing flexibility and improving opportunity to travel – which all alternatives do – becomes providing “substantially greater” flexibility and opportunity. As previously discussed, this “substantially greater” does not apply to 45% of travelers. Reduce travel times becomes have the shortest travel time. Again, as previously discussed, while this may be true for ideal driving conditions and times when there is available ferry space, it is not true for many other reasonably foreseeable situations. Reduce state costs becomes have the lowest state cost per vehicle.<sup>202</sup> As the most costly to build and the 4<sup>th</sup> most costly of 8 alternatives to maintain, clearly Alternative 2B does not reduce state costs and does not meet this purpose and need. Therefore, in order to select 2B as the preferred alternative, the DSEIS has manipulated all five elements of purpose and need.

We repeat that the greatest shortcoming of purpose and need remains that it is narrowly defined to exclude safety and reliability. If these necessary purpose and need elements were included, 2B simply could not be the preferred alternative. There will likely be 600 crashes along 2B from 2020 through 2050.<sup>203</sup> Additionally there will be mortality to “many terrestrial mammal species” that remains unquantified.<sup>204</sup> Since many of the terrestrial mammal species are quite large (moose, goats, bear), vehicle/wildlife collisions could pose a serious threat to human safety as well.<sup>205</sup> The importance of safety and reliability to the AMHS mission is very apparent. That is, in designing the ACF’s, AMHS standard mission requirements were #1 safety, and #2 reliability, to the extent that “vessel operation shall exceed 99% sailing frequency, or as good as existing AMHS service, whichever is greater.”<sup>206</sup>

RESPONSE: The elements of the purpose and need have not been manipulated to favor Alternative 2B. All alternatives are evaluated relative to the same purpose and need factors, and that analysis is presented in quantitative terms in the SEIS.

The purpose and need is to provide capacity to meet transportation demand in the corridor. Each of the reasonable alternatives satisfies the purpose and need to varying degrees in that they provide greater capacity than Alternative 1 – No Action and they have each been designed to accommodate the demand that would occur, given differences in attributes such as cost, travel time, and convenience. In other words, there is an underlying latent demand for travel in the corridor (unconstrained demand), and more or less of that demand will be realized with each alternative, depending on the attributes of that alternative. The Draft SEIS used the term "generate," which does not clearly communicate the situation. The phrasing "realize and accommodate" has been substituted in the Final SEIS for the phrasing "generate and accommodate" to try to clear up confusion.

<sup>206</sup> Draft Design Concept for Day Boat ACF at 16

DOT&PF and FHWA want to select and build a transportation solution that maximizes the number of people who will use it, while also considering costs to the State and users and balancing environmental impacts. There is nothing manipulative about transportation providers wanting to identify, select, and build alternatives that maximize the usefulness of the investment in the transportation facility as measured by the number of people who will use it. Alternative 2B, the preferred alternative in the Draft SEIS, was found to best satisfy the overall corridor demand at the lowest cost per trip. In other words, it had the best return on investment.

As previously discussed, safety and reliability are included in a purpose and need statement for a project only if there is a demonstrable safety or reliability problem on the transportation link being considered. Safety and reliability are not a problem with the current system; therefore, neither safety nor reliability are part of the purpose and need for this project.

Under Alternative 2B, potential mortality to terrestrial mammals from vehicle collisions is disclosed in Section 4.3.15.3 of the Draft EIS. Information regarding traffic related accidents and fatalities was reported in Section 4.3.7 of the Draft SEIS and updated in the Final SEIS. While these impacts are not tied to the purpose and need for the project, they are part of the body of information provided to the decision maker.

### Pro Road Bias

The systemic, biased presentation of pro-road information prejudices the analysis regarding all elements of purpose and need. This was stated in 2008 EPA comments: The “analysis tends to emphasize favorable facts that support the draft conclusions and overlook unfavorable facts that may lead to a different conclusion.”<sup>207</sup> Travel time can be used to illustrate EPA’s point.<sup>208</sup> Alternative 2B travel time analysis includes the DSEIS asserted favorable scenario followed by a reasonably foreseeable unfavorable scenario *in italics*:

- Times are computed for an average driving speed of 45 mph. *Yet, “the presence of ice, fog, wind, and rain would require travelers on the highway to reduce their speed.”*<sup>209</sup> *Since ice and/or blowing snow are fairly common winter driving conditions six months a year, and wind, fog and rain are also fairly common local conditions any time of the year, a 45 mph average speed may only reasonably be assumed for optimum driving conditions. There is no accounting for many days of non-optimum driving conditions. There is no accounting for reduced speeds anticipated through extensive wildlife corridors.*<sup>210</sup>
- All passengers “save” a 1 to 2 hour check-in time currently required for vehicles.

---

<sup>207</sup> 2014 Appendix Z Attachment A at 34

<sup>208</sup> We presented a more thorough analysis in our 2006 FEIS comments and we incorporate them into the record by reference.

<sup>209</sup> 2006 Appendix Y at 33

<sup>210</sup> ADF&G Mountain Goat study at 18; Spacial Use, Habitat Selection, ad Population Ecology of Brown Bears Along the Proposed Juneau Access Improvements Road Corridor, Southeast Alaska, ADF&G, 2012 at 61 regarding speed bumps; ADF&G Moose study at 14

*45% of AMHS passengers are walk-ons,<sup>211</sup> who can easily walk on a ferry 15 minutes before departure. Yet all walk-ons are “charged” a time cost for a non-existent 1 to 2 hour check-in, which they are alleged to “save” if 2B is implemented.*

- There will be no delays for road closures for clearing snow (not associated with avalanches), or for clearing rock, land and debris slides. There will be no glare ice conditions. *Reasonably foreseeable closures for common winter driving conditions will be discussed shortly.*
- No passengers will miss the ferry they hoped to catch. *Poor driving conditions, vehicle/wildlife collisions, getting stuck behind a slow moving vehicle, or arriving on time only to find out that the ferry is full, will necessitate a 1.5 to 2 hour wait for the next ferry, or driving back to Juneau if it was the last ferry of the day.*
- There will be no delays during peak travel times. *It is unrealistic to assume that demand will be evenly distributed amongst the hours of the day, the days of the week, and throughout each summer month.*

RESPONSE: DOT&PF and FHWA dispute the assertion that there is systematic bias in the development and evaluation of alternatives. Each point is taken one by one:

(1) As already discussed: The Draft SEIS acknowledges that adverse driving conditions would occur on the East Lynn Canal Highway in the winter, but anticipates that state maintenance crews would keep the highway open under all but the most severe conditions. Such severe weather conditions may call for road closure. DOT&PF and FHWA have disclosed the impacts of potential road closures and have mitigated those affects to the extent that travel delays and closures would be minimized. All alternatives are forecast based on an annual average basis, and all alternatives were treated equally. DOT&PF has committed to running ferries in Lynn Canal if the road were to be closed for extended periods. Therefore, even during road closures, the proposed road alternatives would be at least as good as the existing service.

Similar arguments as those made by the commenter could be made about the primarily ferry alternatives. There are times when sea conditions cause cancellations or delays, and there are times when the proposed ferries would be out of service for maintenance or overhauls. The analysis does not penalize the ferry alternatives for a decrease in flexibility under such circumstances. Again, all alternatives were evaluated equally and fairly.

A 45 mph average speed is a conservative estimate for the anticipated driving conditions for all but extreme weather conditions, and is representative of the conditions anticipated for most of the time.

(2) By AMHS policy, walk-on passengers have the same two hour check-in time as vehicles in Juneau and one hour in Haines and Skagway. Early check-in time for passengers is

---

<sup>211</sup> McDowell 2000 *Marketing and Pricing Study* Vol. 1 at 65

necessary to avoid departure delays resulting from passengers checking in just before scheduled departure.

(3) The SEIS acknowledges and discloses that during weather events and other extreme events (like rockfall), there will be delays and closures. Travel times are based on averages, and are the travel times that would be experienced most of the time. As already mentioned, poor weather, mechanical problems, and other delays can also occur with ferry options. All alternatives have been treated equally, and are based on average operating conditions anticipated to be experienced in Lynn Canal.

(4) All alternatives include a ferry link; therefore, passengers could miss a ferry on any of the alternatives. For the road alternatives, because the ferries run as shuttle ferries, the time between ferry runs would not be nearly as long as if a passenger were to miss a ferry on the other alternatives. Nonetheless, as already mentioned, the alternatives are evaluated equally, based on average conditions, which are anticipated to cover the majority of trips. Guessing at how many people might miss a ferry 20 years from now, and penalizing one alternative over another, was not attempted, nor would it be defensible. However, the consequences of weather, missing ferries, etc. was disclosed in the impact discussion in the Draft SEIS.

(5) The Draft SEIS did not indicate that there will not be delays during peak times. Full ferries could happen on any of the alternatives during peak times. The impacts of such delays were disclosed in the Draft SEIS. Because the ferries on the road alternatives run as shuttle ferries, the time between ferry runs when ferries are full during peak times would not be nearly as long as if a passenger were to miss a ferry on the other alternatives. Also, it is easier for AMHS to extend the operating day (adding additional shuttle ferry runs or additional vessels) on peak days due to the relatively short distance. Adding runs on the ferry alternatives is more difficult due to the length of the runs. Nonetheless, as already mentioned, the alternatives are evaluated equally, based on average conditions, which are anticipated to cover the majority of trips.

The DSEIS simply ignores the fact that Haines-Skagway winter service will have increased travel times and user costs. Buried in an appendix, we find that winter travel cost increases from \$17.50 to \$30.23, and that travel time nearly doubles from 2.21 hours to 4 hours.<sup>212</sup> These additional times and costs are not factored into the analysis.

RESPONSE: During winter, for Alternative 2B there would not be direct service between Haines and Skagway. Traveling between the two communities, the traveler would ride a ferry to the Katzehin Ferry Terminal and catch a second ferry to their destination, which will increase the cost and travel time to travel between Haines and Skagway. During winter, only two of the three vessels would be operating at one time. One vessel would service Skagway-

---

<sup>212</sup> 2014 Appendix FF pdf page 140

Katzehin and the second vessel would service Haines-Katzehin. This is due to (1) reduced traffic demand and (2) the need to perform annual maintenance. Each winter, each of the three vessels would be serviced while the remaining two would continue to operate.

The purpose and need statement for the project is to improve surface transportation to and from Juneau. DOT&PF and FHWA have updated the data in Chapter 1 of the Draft SEIS since 2006 and have reconfirmed the project purpose and need. Because Juneau is a regional hub, with a substantial population and employment base, the demand for travel in and out of Juneau has been identified as driving the primary needs of the project.

If the DSEIS presented a fair analysis of alternatives as required by NEPA, and a similar explanation was used for Alternative 2B that was used for marine alternatives, it would be that 2B fails to meet purpose and need by 1) not being able to meet “unconstrained” traffic demand; by 2) improving flexibility and opportunity to travel only under certain limited conditions and not improving flexibility and opportunity under others; by 3) reducing travel times only for selected travelers under ideal conditions, and increasing travel times for others; by 4) increasing state costs because it is the most costly alternative to build and one of the more costly to maintain; and by 5) reducing user costs for some users while greatly increasing user cost for others, as discussed in previous sections.

According to CEQ regulation, the preferred alternative is the one “the agency believes would fulfill its statutory mission and responsibilities, giving consideration to economic, environmental, technical and other factors.”<sup>213</sup> The mission of the DOT is to “provide for the movement of people and goods and the delivery of state services.” Marine alternatives move people and goods; people with and without vehicles. Further, Alternative 2B is the most expensive to build, the most environmentally damaging, and the most technically challenging alternative. Logic and common sense dictate it should not be the preferred alternative.

RESPONSE: FHWA and DOT&PF have considered a range of alternatives to meet the purpose of and need for the project. Reasonable alternatives have been evaluated in the Draft SEIS for potential impacts to human and natural resources with considerable input from resource agencies and the public. FHWA and DOT&PF considered adverse and beneficial impacts that could result from each of the alternatives before identifying a preferred alternative in the Draft SEIS. Input from the agencies and public was also factored into the decision-making process. The reasons for identifying Alternative 2B as the preferred alternative was identified in Section 2.5 of the Draft SEIS.

### Socio-economic

The additional costs to communities from adding 32 miles to the Juneau road system and 20 to the Haines Borough<sup>214</sup> are mentioned but not assessed. “Neither the state troopers nor the police in any of the three communities anticipate regular patrols of highway segments”

---

<sup>213</sup> 3/23/81 Federal Register, CEQ at 18027

<sup>214</sup> 2014 Appendix EE at 206

along 2B,<sup>215</sup> again raising legitimate concerns about safety. This is yet another reason why safety has been repeatedly requested to be included in purpose and need. While it is mentioned that there would be “increased demand for public safety services,”<sup>216</sup> there is no attempt to quantify these costs. The new highway would be “outside the fire service districts for both the Haines and Juneau boroughs.”<sup>217</sup> Further, it is anticipated there would be 15.4 accidents a year on 2B in an appendix<sup>218</sup>, and a different figure of 22 yearly crashes in the DSEIS.<sup>219</sup> Which estimate is correct? A difference of 7 accidents per year means there will be 210 more accidents during the 30 year evaluation period. Further, vehicle/wildlife collisions, although anticipated, are not quantified and no costs are attributed. Long response times from the closest Juneau fire station are acknowledged,<sup>220</sup> relegated to an appendix, remain unquantified, and have essentially been swept under the carpet. All these safety concerns become exacerbated because there is no cell phone service along the route.<sup>221</sup> A “hard look” at the true impacts and costs of Alternative 2B in the context of serious safety issues and increased costs to communities is missing.

RESPONSE: The Draft SEIS and the Socioeconomic Technical Report (Appendix EE) presented a public safety analysis for each project alternative. DOT&PF and FHWA acknowledge that project alternatives would have an impact on emergency service providers. There is no method to accurately predict the costs associated with providing public safety for the project alternatives. At this time, public safety agencies do not anticipate adding additional resources in response to the Juneau Access project and this may have an impact on service levels.

Regarding crash statistics reported in the Draft SEIS, DOT&PF and FHWA reviewed the calculations and found an error in the computation for the number of fatalities. The error in the Draft SEIS has been corrected in Sections 4.3.7.5 and 4.4.7.5 of the Final SEIS. In addition, the fatal crash rate and the crash rate used in the calculation of number of fatalities and crashes was changed from an Undivided Urban and Rural Interstate classification to Rural Other Principal Arterials to more accurately reflect conditions on the Alternative 2B and 3 roadways.

The published GCI cellular phone coverage map indicates there is talk and text coverage for approximately 80 percent of the Alternative 2B route. In addition, as a component of Alternative 2B, DOT&PF is proposing to construct a new maintenance station at Comet (MP 66) that will be staffed full time. Emergency services would be able to be contacted from the station.

The missing “hard look” is particularly evident in the manner in which the DSEIS characterizes benefits for health care access. Public comments to the contrary, the DSEIS

---

<sup>215</sup> 2014 Appendix EE at 207

<sup>216</sup> DSEIS at 4-44

<sup>217</sup> 2014 Appendix EE at 207

<sup>218</sup> Id.

<sup>219</sup> DSEIS at 4-63

<sup>220</sup> 2014 Appendix EE at 207

<sup>221</sup> 2014 Appendix J at 37

continues to mistakenly characterize Alternative 2B as giving Haines and Skagway residents “better access to Juneau’s well-developed healthcare sector.”<sup>222</sup> Haines healthcare professionals submitted comments that indicate the opposite is true. Health care workers maintain that an East Lynn Canal road “would not be our choice based upon the healthcare needs of our community. **Any of the four marine alternatives would be much more beneficial to serving the medical needs of Haines residents.**”<sup>223</sup> An unbiased document would have stated that marine alternatives better meet the healthcare needs of Haines and Skagway.

RESPONSE: All of the project alternatives improve access to and from Juneau relative to Alternative 1 – No Action. Presumably, improvements to access in general would improve the access to specific facilities and services. While ferry alternatives might be a preferred mode of access to some healthcare providers, others may prefer the highway alternatives. The healthcare providers cited in this comment did not comment on the Draft SEIS. FHWA and DOT&PF have initiated a supplemental NEPA process with this SEIS and are not required to revisit comments on the previous EIS. Furthermore, the preferred transportation mode for these healthcare workers to serve the medical needs of Haines residents may no longer be ferries.

#### Avalanches

“Lynn Canal is a dynamic, high-energy environment, subject to constant change.” During 15 years of study one new avalanche path was created and “others were substantially expanded. Changes will continue to occur.”<sup>224</sup> Therefore, it is reasonably foreseeable that at some future time due to new avalanche path creation or substantial expansion of existing paths, the roadbed may no longer be safe, with implications for additional capital costs to address new safety concerns, and/or increases in annual maintenance and operational costs, and/or more predicted road closures than currently predicted. The “dynamic” nature of the East Lynn Canal terrain is evidenced by the fact that the 2006 analysis found only 36 avalanches and now there are 41.

RESPONSE: The potential for change is duly noted in the Juneau Access 2014 Update to Appendix J, Snow Avalanche Report, as quoted. Some additional paths were created by mass wasting processes, primarily landslides. Others were added due to alignment changes.

Avalanche paths on highways worldwide are dynamic, and their risk is mitigated to acceptable levels. There is nothing about Lynn Canal that would give reason to expect changes that could not be mitigated acceptably. It would be reasonably foreseeable to have changes that could be mitigated, rather than ones that could not.

The road would be closed when avalanche conditions are present and when mitigation

<sup>222</sup> DSEIS at 4-44

<sup>223</sup> 2/18/05 SDEIS comments by doctors Hussain, Heinz, and Keirstead, physicians assistant Draper, and nurses Malone, Weaver, Miller, and Hodnik, emphasis added,

<sup>224</sup> 2014 Appendix J at 13

cannot be accomplished due to weather conditions; hence, the amount of closure days, as noted in the *2014 Update to Appendix J - Snow Avalanche Report*, Section 2.5, Figure 1: Comparison of Selected Options and in the Draft SEIS at Section 4.3.8.2. Weather patterns are dynamic and it is speculative to state that events causing road closures will increase, decrease, or stay the same over time.

Damage from rockslides and avalanches do not put the road at risk. The likelihood of a slide event has been assessed and would be mitigated to the extent possible during highway design. DOT&PF would be responsible for these risks and would be staffed and equipped to repair damage from slides and maintain the highway in operable condition. DOT&PF would dedicate maintenance personnel and resources for routine maintenance, and would use State and/or federal highway funds to perform major repairs as needed. Clarifying language has been added to the Final SEIS in Sections 4.3.8.2, 4.3.8.3, and 4.4.8.1.

According to the DOT&PF highway maintenance priority system, a highway in Lynn Canal would be a high priority (likely a priority 2) because it would function as a road to connect communities. Crews of maintenance personnel and equipment would be assigned to maintain the Lynn Canal Highway at a high level, with an updated estimated cost \$2.4 million per year in the Final SEIS.

The Avalanche Hazard Index (AHI) “represents the probabilities of encounters between avalanches and vehicles on a highway and the resulting damage.”<sup>225</sup> AHI “is most reliable when a long, detailed history of avalanche activity is available.” But only six years of observation are available for the East Lynn Canal,<sup>226</sup> hardly the “long, detailed history” **required for reliability**. Six years is particularly short for “climate-related phenomena.”<sup>227</sup> The data is further compromised by gaps because daily records were not kept.<sup>228</sup> Further, observed data for three of six years did not conform to expectations and “it appears that some correction for the last three years’ data may be necessary.”<sup>229</sup> The overall picture seems to be that even though the AHI is the best available tool to predict probabilities, it isn’t necessarily reliable when there is sparse data, which is admitted to be the case.

RESPONSE: The *2014 Update to Appendix J - Snow Avalanche Report*, Section 6 Avalanche Mitigation, includes using the Avalanche Hazard Index (AHI), the most widely accepted industry standard for comparison, with other highways and with AHI target values that are accepted within the industry. It also analyzes the effectiveness of avalanche programs, and compares Alaska highway avalanche risk with other common risks. These discussions cover worst cases as well as possible on a factual, data-driven basis, without speculation.

<sup>229</sup> 2014 Appendix J at 204

Historical records older than a few years are usually not available for Alaska projects, so the best available data must be used. The period of study was prepared by professionals in the field of avalanche study and is adequate for EIS-level evaluation. For information on how representative the years studied were, and on corrections applied, please refer to the *2014 Update to Appendix J - Snow Avalanche Report*, Sections 12.2 Appendix 2: AHI Data Collection and Reliability and 12.3 Appendix 3: AHI Input Data Analysis, and the raw data and calculation spreadsheets available online in pdf format at [www.juneauaccess.alaska.gov](http://www.juneauaccess.alaska.gov).

This is consistent with information presented in the 2005 analysis, which “is still valid.”<sup>230</sup> 2005 Appendix J states: “The accuracy of avalanche forecasting programs **is largely dependent** on the accuracy of weather forecasts in the area. . . . Weather forecast **accuracy** in northern Southeast Alaska **is poor** due to the coastal weather pattern and its rapidly moving midwinter thaws, large variations in elevation, strong pressure gradient winds, long periods of darkness, lack of weather data to the west, and the difficulty of keeping weather stations operational.”<sup>231</sup> And again, “snowfall estimates along Lynn Canal are based on sparse data.”<sup>232</sup> In addition, historical avalanche data “is an incomplete record by people who were for the most part untrained in avalanche observation, but it is the most accurate long-term data set available.”<sup>233</sup> This does not inspire confidence in the context of continuing unaddressed public concerns regarding safety and reliability. Again, if the DSEIS presented a “full and fair” analysis, safety and reliability would have been part of purpose and need.

RESPONSE: The Juneau Access *2014 Update to Appendix J - Snow Avalanche Report*, Section 5 Regional Snowfall, states that these are estimates based on limited data. As with all projects in Alaska, the available weather data is regional rather than project-specific, and period of record is variable and usually not very long, as climate records go. Different data sets over different periods inevitably yield a range of values, and quality of the data is variable.

This is why avalanche hazard evaluation and program design is based on actual observed and recorded avalanche activity; not on snowfall estimates or weather records. No greater level of accuracy is either available or necessary for avalanche evaluation at the EIS level. In addition, further weather data is not needed for the final design or construction.

Operational avalanche programs in coastal Alaska always face difficult forecasting conditions, but operate successfully on our highways, at the Alyeska and Eaglecrest ski areas, at Kensington Mine, at Alaska Electric Light and Power various locations, and at the

---

<sup>230</sup> 2014 Appendix J at 2

<sup>231</sup> 2005 Appendix J at 41, emphasis added

<sup>232</sup> Id. at 29

<sup>233</sup> Id. at 276

Alaska Railroad and the White Pass and Yukon Route. Forecasters use all available data including weather models to supplement National Weather Service products and produce custom forecasts.

The 2014 DSEIS does not discuss the actual consequences of a forecast mistake. Under the best-case scenario, an East Lynn Canal (ELC) road would be closed in advance of any avalanche event and no avalanche accidents or fatalities would occur. However, in a worst-case scenario, whether due to human error, malfunction of a weather station, or a fast-moving weather system – any of which can be presumed to happen at some point in time -- a person driving the ELC road could be subject to three types of avalanches:

- 1) Light snow avalanches that “could push a car off the highway but not bury it.”
- 2) Deep snow avalanches that “could bury or push vehicles off the highway and could severely damage a vehicle and injure or kill occupants.”
- 3) Plunging snow avalanches, high speed avalanches that could “tumble vehicles off the highway down a steep slope or into the water.” Many of the avalanche paths on 2B “must be considered plunging snow type.”<sup>234</sup>

Worst-case scenarios must be – but were not - included in the DSEIS due to the stated problems of accurately forecasting the weather in Southeast and sparse data.<sup>235</sup> “If there are gaps in relevant information or scientific uncertainty pertaining to an agency’s evaluation of significant adverse impacts on the human environment, an agency must make clear that such information is lacking and that uncertainty exists. An agency must include a worst case analysis of the potential impacts of the proposal and an indication of the probability or improbability of their occurrence . . . . Thus, one of the federal governments most important obligations is to present to the **fullest extent possible** the spectrum of consequences that may result from agency decisions.”<sup>236</sup> Again, the purpose of the worst-case scenario “is to carry out NEPA’s mandate for full disclosure to the public of the potential consequences of agency decisions, and to cause agencies to consider these potential consequences when acting on the basis of scientific uncertainties or gaps in available information.”<sup>237</sup> This technical information can be part of an appendix but “a plain language summary of the analysis and conclusions of that technical discussion should go in the text of the EIS.”<sup>238</sup> The public should have been – but was not informed that the preferred alternative would dismantle a safe, reliable ferry service and replace it with a road where human error, malfunctioning weather stations and/or rapidly changing weather conditions could cause human fatalities. These impacts are considered significant because they impact public health and safety.<sup>239</sup>

The above assessment is corroborated by the statement that AHI numbers “do not express the probability of death, damage, or injury.” AHI “is used for comparing the hazard rather

---

<sup>236</sup> Federal Register at 18032

<sup>237</sup> Id.

<sup>238</sup> Federal Register at 18033

<sup>239</sup> 40 CFR 1508.27(b)(2)

than evaluating the level of risk.” There are no figures available to determine risk probability.<sup>240</sup>

RESPONSE: The *2014 Update to Appendix J - Snow Avalanche Report*, Section 6 Avalanche Mitigation, includes using the AHI, the most widely accepted industry standard for comparison, with other highways and with AHI target values that are accepted within the industry. It also analyzes the effectiveness of avalanche programs and compares Alaska highway avalanche risk with other common risks. These discussions cover worst cases, and the analyses can be done on a factual, data-driven basis, without speculation.

The 2014 Draft SEIS addresses Avalanches in Chapter 4 in the eighth section under each alternative (e.g., Section 4.3.8.2 for Alternative 2B). While avalanche risk and hazard are addressed in these sections, the text has been augmented to clarify that avalanche hazard includes the risks of property damage, injury, and death. However, the SEIS addresses how to mitigate these risks by such measures as forecasting, road closures, use of explosives, bridges, and snowsheds.

The existing AMHS system has had no fatalities since 1975, making the road alternatives appear to be less safe than the ferry alternatives. While the AMHS is safe, it does have the potential for catastrophic incidents due to the high number of people on a ferry and the hazards of ocean travel in Alaska’s environment. Ferry incidents tend to occur less frequently, but they can be severe, which makes it difficult to compare the safety of highway and ferry alternatives. While travel in private vehicles tends to be less safe than some other modes of travel, Americans routinely select that mode of travel because of the advantages of convenience, cost, and travel time.

Alternatives 2B and 3 would create a transportation system in Lynn Canal that provides these same advantages, but that also comes with a safety risk inherent in private automobile travel. Each mode of modern transportation is designed and operated to current standards to protect human health and safety to the extent possible. The avalanche sections of the 2014 Draft SEIS described how this would be accomplished for this project, including construction of snowsheds and berms, explosives, forecasting, and road closures. For Alternative 2B, the mitigated AHI score would be 28, down from an unmitigated score of 288. Achieving the North American standard residual AHI of less than or equal to 30 to 40. This is achieved through an Avalanche Management Program that allows for a safe traveling road system.

Worst-case scenarios are addressed throughout *2014 Update to Appendix J - Snow Avalanche Report* by using actual avalanche occurrence and weather data comparison with operating avalanche programs, and are further addressed in Section 4.1 Avalanche Event

---

<sup>240</sup> 2014 Appendix J at 23

Variability. The AHI calculations included an increased risk factor for plunging avalanches, which was applied to vehicles that might be carried into the water, as detailed in the *2014 Update to Appendix J - Snow Avalanche Report*, Appendix 1: Avalanche Hazard Index (AHI) Calculation.

The raw data and calculation spreadsheets are available in pdf format online at [www.juneauaccess.alaska.gov](http://www.juneauaccess.alaska.gov).

### Geological Hazards

The 1997 DEIS identified three landslides on the 2B alignment<sup>241</sup> and this information was repeated in the 2006 FEIS. A geotechnical study released in December of 2006, after the April 2006 ROD, found 112 geological hazards, or **37 times more impact** than what was known in 2006. One would expect that this significant new information – updated in 2012 – would warrant some serious analysis in the 2014 DSEIS. But all we know from the DSEIS is 1) DOT shifted the 2B alignment “in several areas to avoid geological hazards;”<sup>242</sup> 2) instead of the 112 originally identified hazards, due to shifting the 2B alignment only 99 hazards would be “encountered;” and 3) the 2012 geotechnical update is characterized as follows: “38 [hazards] were determined to have a high probability of occurrence or likely to result in a more-severe event, 44 were determined to have a moderate probability of occurrence or likely to result in a moderately-severe event, and 17 were found to have a low probability of occurrence or likely to result in a less-severe event.”<sup>243</sup> There is no further analysis of these hazards in the DSEIS, and therefore one has to go to both the 2006 and 2012 geotechnical reports for specific information that has significant implications for the human environment.

The 2006 study evaluated two hazard rating systems, including the Geological Hazard Rating System (GHRs).<sup>244</sup> What is absent from the DSEIS analysis is that the 38 hazards that are described in the 2014 DSEIS as “hav[ing] a high probability of occurrence or likely to result in a more-severe event” are “A rated” hazards on the GHRs scale, which are described in the geotechnical report as having “**sufficient volume to close the highway for several days to weeks and could result in loss of the roadway prism.**”<sup>245</sup> Given this prediction of highway closures for each of the 38 identified A-rated hazards, and given that the highway alignment shifted only in “several areas” to avoid geological hazards, **it is unreasonable to assume there will be no road closures due to geological hazard events.** This information and analysis is completely absent from the 2014 DSEIS and appendices.

Table 5 of the 2012 geotechnical update shows expected debris volumes, lengths of highway impacted by each hazard and the size of debris expected. Volumes of the more severe, A-rated hazards typically fall in the 50 to 1,000 cubic yard category with some predicted to exceed 1,000 cubic yards. Typical debris sizes are between 1 and 4 feet in diameter, with some areas having clast size exceeding 4 feet. These would presumably

---

<sup>244</sup> 2006 Golder Associates Lynn Canal Highway Phase 1 Zone 4 Geotechnical Investigation at 3.3.3.

<sup>245</sup> 2006 Golder at 3.3.3, emphasis added

include some of the car and house-sized boulders too numerous to map.<sup>246</sup> Highway exposure for each hazard often ranges between 50 and 200 feet, with some hazards impacting 200 to 500 feet of highway, some exceeding 500 feet, and others exceeding 1,000 feet of 2B highway alignment.<sup>247</sup> Yet there is no further discussion about the dangers these hazards may pose to the traveling public, and no assessment of anticipated closures resulting from these hazards described as high probability, high volume events. The only assessment of closures in the DSEIS is for avalanches.

Also there is no discussion about additional man and equipment hours that would be required to remove debris, and no discussion of where it would be placed upon removal. These are all serious DSEIS failings because the human environment may be impacted, perhaps to the extent of human fatalities.

Given that many hazards were not affected by the 2012 alignment shifts, and given that they still are predicted to have “a high probability of occurrence,” and given the large volume of material predicted to be released and the large areas of highway affected, and given the definition for A-rated hazards as being “of sufficient volume to close the highway for several days to weeks”, it is unreasonable to assume that there will be no closures for these events, no extra time needed for clearing debris, and no delays in travel time on 2B as a result of numerous, identified, reasonably foreseeable hazard events.

It is also of interest that less severe B-rated hazards have sufficient volume “to close the highway for several hours to a few days.”<sup>248</sup> In light of the above, it is a fallacious assertion that “this Draft SEIS provides an assessment of the effects of those [geological] hazards on alternative project facilities.”<sup>249</sup> Rather, reasonably foreseeable effects of these hazards on the 2B alignment are essentially missing from the analysis.

While the DSEIS states mapping was completed at 117 locations “where rockfall hazard mitigation would be needed,”<sup>250</sup> there is no discussion of how safety might be compromised, or how these specific challenges would increase both construction and maintenance costs. There is the observation that “extremely large boulders were noted, as these may present challenges in removal and compaction of fill for road grading”<sup>251</sup> but there is no meaningful analysis of the implications of this information to the traveling public.

RESPONSE: The *2017 Update to Appendix D - Technical Alignment Report* includes an updated discussion of the geologic hazards within Alternative 2B. Each identified hazard is tabulated to show the associated mitigation condition based on the current design. Based on the current design, inadvertent road closures may occur over the lifetime of the project. It is expected that these closures would require less than half a day to clean up. It is also expected

---

<sup>250</sup> DSEIS at 4-7

<sup>251</sup> DSEIS at 4-7

that in the event of a full width road closure, single lane traffic would be restored within two hours and two-lane traffic would be restored within half a day. This is consistent with closures experienced on other Alaska highways with similar terrain.

It is impossible to precisely predict road closures. However, DOT&PF makes every attempt to mitigate hazards impacting Alaska highways. To protect against potential closures along the Lynn Canal Highway, DOT&PF conducted a hazard mapping program designed to identify the hazards and provide a preliminary assessment of their relative severity. As discussed in “Lynn Canal Highway Phase I Zone 4 Geotechnical Investigation,” hazard frequency values “... should be considered preliminary estimates.” These preliminary estimates were assigned to aid in identification of active hazards versus inactive hazards. The frequency categories presented in Section 3.3.2 of the report could just as effectively been labeled: unknown, frequent, less frequent, infrequent, and rare. The ultimate purpose for providing the estimates of hazard frequency, quantity, predictability, and all other parameters was to highlight areas of importance where additional design effort would be required. The preliminary hazard mapping conducted for this project was highly successful in doing that.

If a road alternative were selected, areas potentially affected by geological hazards that have not already been mitigated by preliminary design elements would be examined in additional detail during the final design phase of this project. With the goal of eliminating or minimizing road closures to the extent possible, detailed mitigation measures would be designed after more data and a refined understanding of each hazard can be obtained. There is, however, always the possibility of a large anomalous event. These rare events occur on highways through mountainous terrain common in states like Alaska, Washington, Oregon, Colorado, Montana, and Wyoming.

A new Maintenance and Operation (M&O) Station would be constructed near the original Comet mine camp (MP 66) for Alternative 2B. Equipment for snow removal and debris cleanup would be stored at this location. Equipment routinely used to clear debris from highways in Alaska includes pickups equipped with snow plows, loaders, excavators, and dump trucks. The Technical Alignment Report lists the anticipated M&O heavy equipment.

Debris cleanup is a routine activity for DOT&PF M&O. The time required to remove debris from the highway varies depending on type, size, and volume of material. M&O policy is to quickly open one lane of travel to allow traffic flow during remaining cleanup. Debris is typically disposed of along the downhill shoulder of the highway within the right-of-way. Here are three typical scenarios to help provide a more definitive estimate of the time required to clear debris from the road:

(1) In Ketchikan, rockslides of 10-30 cubic yards are not uncommon. These events typically

fill the rockfall catchment ditch and spill over onto the paved shoulder and part of one lane. In this case, traffic is routed around the debris using standard traffic control devices to redirect the traffic onto the unaffected lane and shoulder. Once M&O is notified of the road closure, traffic flow would be reestablished in this manner in approximately 30-60 minutes by personnel responding from the Lynn Canal M&O Station.

(2) In Ketchikan and parts of the Haines Highway, there are infrequently rockslide events of 50-100 cubic yards that fill the rockfall catchment ditch, shoulder, and one lane, and then spill over into the second lane and shoulder. In this case, M&O would respond with crew and equipment sufficient to provide traffic control and cleanup simultaneously. Once M&O is notified of the road closure single lane traffic flow would be reestablished in this manner in approximately 1-2 hours by personnel responding from the Lynn Canal M&O Station.

(3) Debris flows on the Haines Highway have covered the full width of the highway, taking a full day to open up a single lane of traffic.

Highway cleanup costs are tied to the M&O labor and equipment rates, and any additional rentals or contracted assistance. These costs are typical highway maintenance costs that have been accounted for in alternative cost estimates and are reflected in Attachment C to the *2017 Update to Appendix D - Technical Alignment Report*. Capital improvement costs for the geologic hazard mitigation strategies are included in the updated Engineer's Estimate in Attachment E to the *2017 Update to Appendix D - Technical Alignment Report*.

The section that is supposed to analyze Alternative 2B in terms of geology is extremely sparse. For example, the DSEIS still states that Avalanches are “the most common geological hazard,”<sup>252</sup> even though there are “only” 41 avalanches and 117 locations where rockfall hazard mitigation was necessary.<sup>253</sup> The DSEIS concludes the geotechnical reports “have been incorporated into this Draft SEIS” and that the 2B alignment was changed “in several locations.”<sup>254</sup> However, as previously discussed, there were far more locations where the alignment was not changed. For example, there are 30 rockfall areas in the new alignment. “Several” rockslides that could reach the alignment are within avalanche paths.<sup>255</sup> But with 30 rockfall areas identified, and only “several” that are in avalanche paths, there would be 27 rockfall areas outside of avalanche paths. This does not agree with a prior assessment of 117 rockfall locations. Further, “most” of the debris flows are in avalanche paths,<sup>256</sup> but what about those that are not?

RESPONSE: Section 4.3.8 of the Final SEIS and *2017 Update to Appendix D – Technical Alignment Report* have been updated with additional geological hazard information.

---

<sup>252</sup> DSEIS at 3-36

<sup>253</sup> DSEIS at 4-7

<sup>254</sup> DSEIS at 4-65

<sup>255</sup> DSEIS at 4-67

<sup>256</sup> DSEIS 4-67

With some minor additions, the rest of the section on Landslides and other Geological Hazards repeats material from the 2006 analysis, when the extent of geological hazards was unknown. It mentions “a raised roadway that would prevent rock and avalanche debris from flowing onto the road” with culverts that “would pass water and small debris.”<sup>257</sup> This may have been true when only 3 landslides and no geological hazards were identified, but is likely not the case now. There is no current assessment (highlighted in gray) for the new information. That the 2014 DSEIS can still state the “conservative estimate of potential new rockslide activity” as being “approximately one per decade”<sup>258</sup> indicates this section has not been updated to NEPA standards. One only need to look at Table 5 of 2012 geotechnical update to see how far off the mark this is. The unchanged assessment that road closures due to slides would be “infrequent”<sup>259</sup> shows an utter lack of care given to significant new information that could change the practicability of Alternative 2B, construction and maintenance costs for 2B, closures for 2B, and resulting travel opportunity and time costs for users.

This sparse information regarding geological hazards is contrasted with detailed avalanche information including location, mitigation, extra capital and operating costs, and estimates for road closures.<sup>260</sup> Since the DSEIS includes detailed information on how avalanches will either be mitigated, or how unmitigated hazard events will cause travel delays and road closures,<sup>261</sup> it also needs to include similar information about rock, debris, and landslide hazards on 2B. It is clear that the DSEIS has failed to take the required “hard look” and fully disclose the implications of this new information on the human environment, in violation of NEPA.

RESPONSE: All hazard types were defined in the Phase I Zone 4 Geotechnical Investigation (Golder Assoc., 2006) in Section 3.3.1 Definition of Hazards. While rockfall is used to define individual blocks of rock that detach from bedrock outcrops and fall, rockslides are comprised of multiple blocks. Both are natural processes that are present along most highways in Alaska. DOT&PF manages rockfall and other types of hazards along existing highway corridors with the Unstable Slope Management Program (USMP). If Alternative 2B were to be constructed, all the rock cuts and rock slopes that exist along the highway corridor would be inventoried, assessed, and ranked in accordance with DOT&PF’s USMP policies. There are two rockslide locations. Avalanche studies conducted as part of the *Update to Appendix J – Snow Avalanche Report* indicate that large rockslide paths may develop as avalanche paths in the future, although this is undemonstrated at either of the identified rockslide locations. The Draft SEIS contained alignment sheets (Attachment A of the *Technical Alignment Report*) that depicted the locations of the identified geological hazards and avalanche paths. Both are treated individually for design purposes and mitigated

---

<sup>257</sup> Id.

<sup>258</sup> DSEIS at 4-67

<sup>259</sup> Id. at 4-68

<sup>260</sup> DSEIS at 4-67

<sup>261</sup> 2014 Appendix J, and DSEIS at 4-67

differently. Where avalanche paths and geological hazards are coincident, the *Technical Alignment Report* geological update reports the respective proposed mitigation measures.

### Road Closures

There is no information given for delays when the Katzehin ferry will not be able to dock because “exposure to the west is still evident and some berthing losses can still be expected.”<sup>262</sup> These lost dockings will occur because the state decided not to invest an additional \$35 million in breakwaters.<sup>263</sup> There is no information on the number of days or dockings likely missed per year due to strong wind conditions, which occur frequently in Lynn Canal during winter months.

RESPONSE: A review of the Glostien Associates, Inc., analysis (*Lynn Canal Wind and Wave Climatology – Multi-Year Extremes, Lynn Canal Wind and Wave Climatology Study for Vessel Operations*) indicates that, while the crossing for Alternative 2B is short and the vessels can safely handle wave conditions, it is possible that the sailing may be canceled. Based on a statistical evaluation of the data indicates weather conditions that could prevent sailings one to six days a year. The number of sailings that would be missed depends on the number of sailings per day and whether the inclement weather occurs during the scheduled sailing times.

The near-shore wave height prediction data suggests relatively low wave heights (under two feet) near the proposed Katzehin Ferry Terminal site regardless of magnitude of the wind event (northerly and southerly directions). The Katzehin Ferry Terminal is somewhat exposed to the west. There is no data for the westerly direction. However, the fetch distance is limited, and the waves should be relatively low. While winds may be strong, mooring of the ferry at the Katzehin Ferry Terminal would not likely be significantly affected by wave conditions from any direction.

No information is given in the DSEIS about why the 34.5 days of closure predicted in 2006 has decreased to 12 days. It is stated that “no avalanche debris should be cleared when visibility is poor due to darkness or conditions such as fog.”<sup>264</sup> Darkness and fog are common winter conditions, yet no closures are estimated for these common and therefore reasonably foreseeable occurrences. It is of interest that the Klondike Highway, which is the closest proximity avalanche-prone road to the proposed East Lynn Canal road, is closed for avalanche danger, heavy snowfall, glare ice, blowing and drifting snow, rockslides, and poor visibility/white out conditions.<sup>265</sup> About half of these reported road closures are for avalanches and about half for the other noted winter conditions,<sup>266</sup> the point being that it is reasonably foreseeable that Alternative 2B will also be closed due to common winter driving conditions and road maintenance challenges.

---

<sup>262</sup> 2005 SDEIS Appendix D, Attachment D at 6

<sup>263</sup> *Id.*

<sup>264</sup> 2014 Appendix J at 37

<sup>265</sup> Personal communication from U.S. Customs and Border Protection Skagway Port of Entry

<sup>266</sup> *Id.*

RESPONSE: In the 2006 Final EIS, Table 4-16, road closures for Alternative 2B were estimated to be approximately 33.9 days a year. The 2014 Draft SEIS, Table 4-27, estimated road closures to be approximately 12.1 days per year. This reduction in road closures is due to added avalanche mitigation measures, such as snowsheds.

DOT&PF and FHWA have disclosed the anticipated road closure effects due to weather and avalanches in the Draft SEIS. Section 4.3.7.2 "Travel Flexibility and Opportunity" describes the effects for the Alternative 2B. Service to and from Juneau during a road closure would be by one or more of the Day Boat ACFs that would be part of Alternative 2B.

There is no information on why 99 identified geological hazards, including debris flows, will not cause any road closures.

RESPONSE: It is impossible to precisely predict road closures. However, the Department makes every attempt to mitigate hazards impacting our highways. To protect against potential closures along the Lynn Canal Highway the Department conducted a hazard mapping program designed to identify the hazards and provide a preliminary assessment of their relative severity. As discussed in "Lynn Canal Highway Phase I Zone 4 Geotechnical Investigation", hazard frequency values "should be considered preliminary estimates." These preliminary estimates were assigned to aid in identification of active hazards versus inactive hazards. The frequency categories presented in section 3.3.2 of the report could just as effectively been labelled: unknown, frequent, less frequent, infrequent, and rare. The ultimate purpose for providing the estimates of hazard frequency, quantity, predictability, and all other parameters was to highlight areas of importance where additional design effort would be required. The preliminary hazard mapping conducted for this project was highly successful in doing that.

The *Update to Appendix D - Technical Alignment Report* includes a discussion of geologic hazards. Each identified hazard is tabulated to show the associated mitigation condition based on the current design. Based on the current design, inadvertent road closures may occur over the lifetime of the project. It is expected that these closures would require less than half a day to cleanup. It is also expected that in the event of a full width road closure, single lane traffic would be restored within two hours and two-lane traffic would be restored within half a day. This is consistent with closures experienced on other Alaska highways with similar terrain.

During the final design phase of this project areas impacted by hazards that have not already been mitigated by the current alignment and could potentially close the road will be looked at in additional detail. With the goal of eliminating or minimizing road closures to the extent possible, detailed mitigation measures will be designed after more data and a refined understanding of each hazard can be obtained. There is however, always the possibility of a

large anomalous event. These rare events occur on highways through mountainous terrain common in states like Alaska, Washington, Oregon, Colorado, Montana, and Wyoming.

On the Haines Highway, the other proximity Lynn Canal highway, a single debris flow frequently closes the road: “Between 2004 and 2012 the highway has been closed about ten times including a three to four-day closure during Thanksgiving of 2005. Most of these closures were for a day or so” with debris depths of 5 to 20 feet.<sup>267</sup> There are 43 debris flows along the 2B alignment.<sup>268</sup>

“Staffing is not adequate to ensure trafficable roads at all times.”<sup>269</sup> Yet there are no road closures planned for major snowstorms, which are common winter occurrences. This is particularly significant because it is anticipated that over the next fifteen years “average seasonal snowfall in northern Southeast Alaska will be significantly above average” due to a prevailing La Nina system.<sup>270</sup>

RESPONSE: Heavy snowfall and avalanches were accounted for in the estimated road closure time, and DOT&PF and FHWA are comfortable with the number of predicted closures. The road will be closed primarily when avalanche conditions are present and mitigation cannot be accomplished due to weather conditions. This is why there are so many closure days, as noted in *2014 Update to Appendix J – Snow Avalanche Report*, Section 2.5, Figure 1: Comparison of Selected Options. Weather patterns are dynamic, and it is speculative to state that events causing road closures will increase, decrease, or stay the same over time.

There is no accounting for high winds and poor visibility that will keep helicopters grounded and delay avalanche control. That is, helicopters would be used on avalanche paths that don't have blaster boxes.<sup>271</sup> Helicopters require “calm ridgetop winds and good visibility. The lack of good flying weather can result in substantial delays and missed opportunities.”<sup>272</sup> It has already been stated that “poor weather conditions can result in multi-day gaps in [air] service,”<sup>273</sup> and also that Lynn Canal air travel “is often constrained by fog, high winds, or snow storms and can be delayed up to several days.”<sup>274</sup> Given the above, it is unreasonable to assume only 12 days of closure due to avalanches, because there will be many days when avalanche bombing simply cannot occur due to weather conditions.

RESPONSE: The effects of bad weather on helicopter use were anticipated, which is why remote exploders are proposed to reduce reliance on helicopter flight limitations due to bad weather and darkness. Remote exploders can be loaded and serviced between storms during

---

<sup>267</sup> Haines Highway Draft EA, 2013 at 15

<sup>273</sup> 2004 SATP at 41

<sup>274</sup> DSEIS at 1-7

daylight hours.

Heavy snowfall and avalanches were accounted for in the estimated road closure time, and DOT&PF is comfortable with the number of predicted closures. The road will be primarily closed when avalanche conditions are present and mitigation cannot be accomplished due to weather conditions. This is why there are as many closure days, as noted in the Draft SEIS, *2014 Update to Appendix J – Snow Avalanche Report*, Section 2.5, Figure 1: Comparison of Selected Options.

Helicopters will also be used to survey for goats in avalanche chutes prior to detonation.<sup>275</sup> Blaster box utility may be limited by ice build-up.<sup>276</sup> Icing is known to be a problem at upper elevations and with an admitted “difficulty of keeping weather stations operational,”<sup>277</sup> it seems logical that there would be a similar difficulty in keeping blaster boxes operational. Since this is untested technology for our maritime climate, worst-case scenarios should have been included.

RESPONSE: Rime ice buildup is common to all weather stations and avalanche mitigation systems used at altitude in coastal Alaska. All programs in the region operate successfully despite rime buildup affecting such high-elevation installations weather instruments and remote exploders. Rime ice buildup was factored into all risk, closure, and budget estimates.

An assumption is made that the “safety and reliability of this highway would be a high enough priority to merit adequate funding. Short funding would increase closure time.”<sup>278</sup> Yet the winter maintenance allocations of 26.2 lane miles per operator “affords [only] a slightly better level of service than the regional average of 28.8 lane miles per operator.”<sup>279</sup> In fact, the Klondike Highway uses two operators to maintain 14.8 centerlane miles<sup>280</sup> indicating maintenance funding for Alternative 2B is indeed “short”.

RESPONSE: According to the DOT&PF highway maintenance priority system, the access highway for Alternative 2B would be a high priority, more than likely a priority 2. This classification is due primarily to the fact that its functioning class is as a road used to connect communities. Crews of maintenance personnel and equipment would be designated to maintain the access highway at a high level, with an updated estimated cost of \$2.4 million per year, equating to approximately \$17,000 per lane mile. The average cost for highway maintenance throughout Southeast Alaska is \$9,041 per lane mile.

Updated cost estimates for road maintenance and estimates for cost per lane mile are in the

<sup>280</sup> Personal communication from Skagway DOT Station Foreman Malvenia Tyson

Road closure analysis is totally inadequate with closure predictions based on unrealistic, best-case scenarios. As discussed in a previous section, safety and road closures warrant a worst-case scenario so that decision-makers and the public fully understand the consequences associated with implementing the preferred, weather-dependent alternative.

RESPONSE: Worst cases were accounted for by using actual weather records, rather than theoretical estimates. The closure program is explained in Section 6.4.5 Highway Closure Program, and the calculations for closures are detailed in APPENDIX 4: Highway Closures as follows:

Closure periods were calculated using the weather logs and avalanche observations from the same six years of field studies as were used in the AHI calculations, with the same correction factors applied.

Each avalanche cycle was evaluated to determine how long the highway would have been closed, and what level of explosive work would have been conducted. Weather events that would have been forecast as avalanche cycles but turned out to be false alarms are also tallied, but given lower figures for closure time and explosive operations, as would have occurred once forecasters realized the expected activity was not materializing.

Highways with mitigated AHIs comparable to the East and West Lynn Canal route are left open at night at ‘low’ through ‘considerable’ hazard levels, unless natural avalanches are forecast to reach low elevations. If avalanches are likely to reach low elevations, and explosive work is not completed, the highway would be closed at night. Night closures were tallied for the major avalanche cycles.

Because howitzer use allows closure section by section as explosive work proceeds, the West Lynn Canal alternative uses spot closures in daytime for explosive work when the danger level is increasing but instability is limited. The highway would be closed when the instability is increasing more rapidly than explosive work can proceed. Prolonged closures were tallied under these conditions.

Limitations of darkness and storm conditions were factored into the initial tallies for all options. Corrections are added as follows:

- a. An additional 20 percent was taken from the explosive delivery mission tally for helicopter-based programs, because many days that appear suitable based only on the weather records would in fact be too windy, foggy, or stormy. The mission tally was simply reduced, as the window of opportunity would pass and the snowpack would either slide or stabilize on its own.

b. All blaster box figures were reduced 30 percent because the raw mission tally reflects only their capability for being fired in storm conditions. Operations using blaster boxes report that the high cost of ammunition and its delivery by helicopter necessitate using them conservatively.

c. Howitzer use figures for the West Lynn Canal WLC1 option were only reduced ten percent, as weather would not have much effect on transporting a trailered howitzer on the highway.

The tallies for missions and highway closure times under all options were further adjusted by 20 percent for crew limitations. It is often impossible to conduct explosive operations because the entire maintenance crew is tied up with other urgent work, or is working far enough away that they cannot get back in time, or because conditions develop too rapidly to respond, or because of budget and workforce limitations. Some other highway operations reported even greater limitations due to crew factors, but it is assumed here that safety and reliability of this highway would be a high enough priority to merit adequate funding. Short funding would increase closure time.”

#### Climate Change

Climate change models predict more extreme weather events, which are in fact occurring in the Lynn Canal area. For example, the summer of 2014 was the most rainfall on record. There was a record-breaking snowfall during the 2011-2012 winter and the second most snowfall on record occurred during the 2006-2007 winter. Additionally, December of 2013 broke all snowfall records for that month.<sup>281</sup> Extreme weather events such as these and others to come will have implications for 2B, a road that passes below 41 active avalanche paths and 99 debris, land, and rock slide areas. More moisture means more snow, more slides, more money for maintenance and more closures. It is admitted that landslides are triggered by “heavy precipitation or snowmelt,”<sup>282</sup> and the same is true for land, debris, and rock slides.

“There is general agreement that the Earth’s climate is currently changing at an accelerated rate and will continue to do so for the foreseeable future.”<sup>283</sup> Threats posed include increased storm intensity and changing precipitation amounts and patterns.<sup>284</sup> Weather events associated with climate change will have the most implications for Alternative 2B, because it has a marine component and because it is situated underneath 41 avalanches and 99 other geological hazard that can be triggered by wind loading, rain, and snow events, and also require helicopter use for routine maintenance.

The DSEIS fails to include the required “hard look” at the implications of climate change on its preferred alternative. Further, Alternative 2B will contribute the most to climate

---

<sup>281</sup> Personal communication from Paul Swift, Haines NOAA observer station #2

<sup>282</sup> DSEIS at 3-38

<sup>283</sup> DSEIS at 3-45

<sup>284</sup> DSEIS at 4-200

change because it increases the number of vehicle miles by “generating” or “inducing” travel.<sup>285</sup>

RESPONSE: The discussion on climate change in the Draft SEIS recognizes the potential for increased storm intensity as well as changes in precipitation and weather patterns. Taking a “hard look” at the effects of climate change on any alternative can only be as reliable as predictions for future conditions. As noted in Section 4.7.9 of the Draft SEIS, current design practices address the potential impacts to infrastructure resulting from climate change and increased storm intensity. The 2016 Update to Appendix D Technical Alignment Report provides new information regarding geologic hazard mitigation.

#### Mooring and Loading Operations (MLOPS)

In its analysis marine consultants Coastwise Corporation makes an *assumption* that MLOPS for the ACF will be efficient and *achievable*.<sup>286</sup> Achievability is yet untested because ACF’s have yet to be built. Achievability is suspect because current AMHS MLOPS are substantially longer. The MLOPS times for 2B are admittedly “*short and were selected in order to ensure the maximum possible level of service.*”<sup>287</sup> However, the possibility is admitted that if they are overly optimistic, night crew assistance and overtime pay would be necessary.<sup>288</sup> This means that costs for the marine component of 2B may be underestimated and also that ferries may not be able to keep to schedule, with the implication that the number of round trips may need to be reduced, which would decrease the number of passengers that can be transported on Alternative 2B.

RESPONSE: The maneuvering and loading operations times (MLOPS) used in the Draft SEIS for alternatives employing a drive through loading and unloading approach are aggressive but achievable and realistic as demonstrated by actual measured times of existing public ferry systems. The MLOPS (as detailed in Appendix GG, *Marine Segments Technical Report*) was revised for the Final SEIS to reflect a more conservative timing, given the proposed terminal and vessel configurations. Ultimately, the final configuration of terminals and ferries would be determined by the operator, AMHS, as NEPA documents do not dictate operational decisions. For the SEIS, what is important is that all of the alternatives be designed for realistic efficiency so they can be compared on an equal basis.

According to Coastwise, currently AMHS loads 2 cars per minute. At this rate 53 vehicles would take 26.5 minutes to load. “Fast loading times require that vehicles be ticketed, checked for security, and staged prior to vessel arrival.”<sup>289</sup> However, the Katzehin ferry terminal will be unmanned, so no tickets, no security and no guided staging can occur until after the vessel docks. Given that this will be the first unmanned AMHS terminal, the DSEIS should have – but did not - furnish details on how DOT anticipates the system will

---

<sup>285</sup> DSEIS at 4-230

<sup>286</sup> 2014 Appendix GG at 13, emphasis added

<sup>287</sup> 2014 Appendix GG at 15, emphasis added

<sup>288</sup> Id.

<sup>289</sup> Draft Design Concept for Day Boat ACF, Coastwise, 2/25/13

even work at all, much less to the anticipated high level of efficiency. Additionally, the AMHS has installed security precautions at all other marine terminals, but discussion regarding how security will be provided at an unmanned Katzehin terminal is absent.

RESPONSE: The purpose of the SEIS for the JAI Project is to evaluate the proposed project's environmental impacts to meet the requirements of NEPA, not to provide operational and logistical details for each alternative. To the extent operational details are known at this time, they are identified in the Final SEIS.

The operation of the proposed remote terminal does not require staffing. Homeland Security/U.S. Coast Guard do not require a separate security plan for unmanned terminals. The security for unmanned terminals is covered by the individual vessel security plans that are approved by the U.S. Coast Guard. Receiving approval for vessel security plans for vessels servicing Haines/Skagway/Katzehin is not anticipated to be an issue. AMHS currently has several unmanned terminals in service.

Details of fare collection would be determined during the project design. However, it is possible fares would be collected on board and possible fares would be collected only in one direction.

There would be no staging required organizing vehicles by destination. With a single destination, it would be "first in line, first on." In addition, the Day Boat ACFs would use drive through loading and unloading operations, which allows vehicles to load faster than ferries that load from the side.

Coastwise characterizes a 15 minute ACF MLOPS as "more aggressive than existing AMHS," necessary only because "fast turn around times are critical to the success and cost effectiveness of high frequency ferry systems."<sup>290</sup> For other ACF alternatives, a "most generous MLOPS time of 30 minutes" was used.<sup>291</sup> However, for the Haines/Katzehin route, "reducing MLOPS from 30 minutes each to 15 minutes (for each load or unload interval) allow three additional round trips."<sup>292</sup> In this 15-minute time period a ferry needs to slow down and secure its moorage, unload 53 vehicles, ticket and load 53 vehicles for the return trip, and unmoor the vessel before getting underway. This untested best-case scenario seems highly improbable. For example, it is anticipated that the ACF could be loaded at 6 cars per minute and unloaded at 9 cars per minute.<sup>293</sup> For a ferry that carries 53 vehicles, loading and unloading would take 15 minutes, leaving no time for mooring, unmooring, ticket-taking, security, etc.

RESPONSE: Please refer to the MLOPS table in Attachment E of the Appendix GG, *Marine*

---

<sup>290</sup> 2014 Appendix GG at 38

<sup>291</sup> Draft Design Concept for Day Boat ACF, Coastwise, 2/25/13 at 11

<sup>292</sup> Id. at 13

<sup>293</sup> Id, Appendix B at 4

*Segments Technical Report* of the Draft SEIS. For Alternative 2B, each load/unload operation MLOPS is 10 minutes, for a total of 20 minutes. Although aggressive, timing is achievable based on actual measured times of existing ferry systems. The MLOPS table has been updated for the Final SEIS.

There is some confusion in the DSEIS and Appendices regarding whether or not an even faster MLOPS is planned for Alternative 2B. That is, “to achieve desired number of round trips,” MLOPS for Alternative 2B were reduced to 10 minutes.<sup>294</sup> (The sailings with 10 minute MLOPS are referred to as ACF-X sailings). The appendix clearly states that implementation is necessary to “verify the assumptions made.”<sup>295</sup> Given that a 15- minute MLOPS is “aggressive”, and that MLOPS time are “critical” to success and cost effectiveness, a 10-minute MLOPS for Alternative 2B not only is untested, but also extremely unrealistic. In other words a MLOPS of 10 or 15-minute duration appears to be yet another best-case scenario for Alternative 2B. Obviously, with exceedingly short (and perhaps unrealistic) MLOPS, and the resulting extra ferry round trips, the capacity and frequency of 2B is likely overestimated, and time delays are likely underestimated. Manipulating MLOPS inflates both the capacity and the opportunity to travel for 2B, because these purpose and need elements are functions “of the frequency of [Katzehin] day boat ACF service.”<sup>296</sup> If the number of sailings is inflated due to unrealistic MLOPS times, then the analysis is biased towards selecting 2B. This is particularly true when comparing Alternative 2B with Alternative 3.

RESPONSE: See the updated MLOPS table Attachment E of Appendix GG, *Marine Segments Technical Report*. The MLOPS for Katzehin to Haines/Skagway is extended from 10 minutes to 15 minutes.

### Costs

As previously discussed, Alternative 2B is the most costly to build and the 4<sup>th</sup> most costly of 8 alternatives to maintain. If built, the government would provide a subsidy of \$52 per vehicle.<sup>297</sup> Alternative 2B therefore seems to be a poor choice for the purpose and need element of reducing state costs. It is also a fact that Alternative 2B costs “are greater than the benefits provided,” to the tune of 309 million dollars.<sup>298</sup> It makes no sense for FHWA to spend public money on a project with this huge level of negative economic benefit. Even with the incredibly skewed analysis as previously discussed, 2B is simply not worth building.

There are also energy costs involved, where 2B has the 3<sup>rd</sup> highest energy use of 8 alternatives,<sup>299</sup> and the 3<sup>rd</sup> highest greenhouse gas emission costs.<sup>300</sup> It also has the highest safety costs with the highest number of accidents, and human and animal fatalities. 2B also

---

<sup>294</sup> 2014 Appendix GG, Attachment C at 2B-1 and Attachment E at 1

<sup>295</sup> 2014 Appendix GG at 39

<sup>296</sup> DSEIS at 2-16

<sup>297</sup> DSEIS at 2-16

<sup>298</sup> DSEIS at 4-62

<sup>299</sup> DSEIS at 4-188

<sup>300</sup> DSEIS at 4-202

has the highest environmental costs.

Costs for building and maintaining tunnels and snowsheds are likely low-balled. Safety features such as lighting, ventilation, and adequate shoulder width are not discussed in sufficient detail. All that is known is that the snowsheds are designed for “two lanes and no lighting, mechanical ventilation or real-time traffic monitoring.”

This can be problematic because they create “light/shadow vision problems, ice formation, and [are] something for cars to run into.”<sup>301</sup> The required “hard look” at safety issues posed by tunnels and snowsheds is missing from the DSEIS. Safety issues will be further compromised because there is no cell service along the route.<sup>302</sup>

RESPONSE: During the final design phase of this project, tunnels would be designed in accordance with FHWA and AASHTO guidance to ensure safe travel for the public. The tunnel cross sections would provide sufficient space for travel lanes, adjacent shoulders, and elevated walkways for inspection, maintenance, and emergency use. These structures would include lighting in the tunnel interior, entrance lighting, exit lighting, guardrail protection at approaches, traffic control to stop approaching traffic from entering following activation of a fire alarm, and standpipe systems for fire protection; however, mechanical ventilation is not proposed.

Snowsheds would be designed with an open side on the downhill side of the road, eliminating the need for features that are required for closed tunnel systems. Guardrail protection at approaches would be provided.

The costs to construct the tunnels and snowsheds are reflected in the updated Engineer’s Estimate in Attachment E to the *Update to Appendix D - Technical Alignment Report*. These costs include the anticipated features mentioned above.

The published GCI cellular phone coverage map indicates there is talk and text coverage for approximately 80 percent of the Alternative 2B route. In addition, as a component of Alternative 2B, DOT&PF is proposing to construct a new maintenance station at Comet (MP 66) that will be staffed full time. Emergency services would be able to be contacted from the station.

### Funding

The realistic assessment from the state’s transportation plan is that if begun, an ELC road may not be completed.<sup>303</sup> If construction begins and is not completed, NHS funds could not be used for the same reason that federal funding could not be used to improve a road to

---

<sup>301</sup> 2014 Appendix J at 30

<sup>302</sup> 2014 Appendix J at 37

<sup>303</sup> Lets Get Moving, 2030 at 21

Cascade Point – that is, because it would not connect to another community.<sup>304</sup> As of the DSEIS writing, “sufficient funding” is only available for construction to Independence Lake. The rest of the road would be constructed as “funds become available.”<sup>305</sup> However, federal code requires that “full funding” needs to be reasonably anticipated “within the time period contemplated for completion.”<sup>306</sup>

The state transportation plan mandate is to “bring fiscal discipline” and shorten “the gap between needs and revenues.”<sup>307</sup> The state plan understands and acknowledges the challenges posed by transportation in Southeast Alaska: “Extreme weather, rugged terrain, vast distances, low population density and scattered islands make road construction difficult and very costly compared to the number of users.”<sup>308</sup> This is a very accurate description of reality and a very good rationale for why 2B should not be selected.

Given reality-based financial constraints admitted in the state transportation plan and the SATP, and given our previous discussion, it is hard to conclude anything but that complete funding for Alternative 2B will not materialize. In addition to not being completed, there are serious concerns about safety, durability and economy of maintenance.<sup>309</sup> Building Alternative 2B would entail squandering public funds on a high-risk road.

RESPONSE: The current surface transportation system in northern Lynn Canal is eligible for National Highway Performance Program (NHPP) funding. New roads as proposed under Alternatives 2B and 3 can be designated as NHS intermodal connectors and are thus eligible to receive NHPP funds. Approval of a modification to the NHS system is independent of an FHWA Final EIS/ROD. An NHS modification would occur prior to a request for construction funding. Section 2.5 of the Draft SEIS described funding considerations and the plan to fund construction of the preferred alternative in its entirety

Currently, there are no funds shown in the STIP, since the preferred alternative has been changed to Alternative 1 – No Action; however, during the time period between the release of the 2014 Draft SEIS and prior to the change of the preferred alternative to Alternative 1 – No Action, the completion of the design phase was shown in the 2016-2019 STIP. The funding for construction was after FFY 2019.

A build alternative would have been constructed in stages, which is not segmentation. The initial construction stage would have occurred after the time frame presented in the current STIP (after 2019). Showing the intent to fully fund the project in the years beyond the current STIP shows intent by DOT&PF to fund the project in its entirety and is accepted by FHWA. (See <http://dot.alaska.gov/stwdplng/cip/stip/index.shtml> for full details on the STIP.)

---

<sup>304</sup> DSEIS at 1-7

<sup>305</sup> DSEIS at 2-12

<sup>307</sup> 2030 Lets Get Moving at 30

<sup>308</sup> Id. at 36 - 37

<sup>309</sup> 23 USC 109(a)(1)

Had an alternative been selected with an estimated project cost greater than \$500 million, then according to 23 U.S. Code 106(h), it is a major project, and a project management plan and financial plan would have been produced for approval by the FHWA after the Final SEIS.

### Invasive Species

The DSEIS admits that “invasive plant species could be introduced.”<sup>310</sup> Since the East Lynn Canal corridor is currently pristine regarding invasives, huge public expenditures to eradicate invasives could be required after-the-fact, adding new costs to 2B. NMFS expressed the following concerns: “Although the Draft Supplemental EIS responds to a comment concerning invasive plants by describing measures to minimize their spread, the general public transportation vector is not considered. Vehicles traveling the East Lynn Canal Highway may spread these plants along the road corridor and potentially into anadromous streams and coastal areas that are currently not infested. Eradication or control of these invasive plants, once established, can be expensive and difficult.

RESPONSE: Section 4.3.14 of the Draft SEIS acknowledged that Alternative 2B could have indirect effects on terrestrial vegetation from the general public transportation sector. Draft SEIS Sections 5.4 and 12.12.1 included measures to reduce the spread of invasive species during construction. Once the project is completed, road maintenance activities would be subject to the DOT&PF best practices for controlling the spread of invasive species.

Recognizing this, the Metlakatla Indian Community has established a vehicle wash down system for all vehicles entering Annette Island from the Alaska Marine Highway System (Winter 2012).

NMFS recommends that all alternatives in the Final Supplemental EIS examine the potential for aquatic invasive species to spread as a result of project activities and identify management measures to prevent the spread of invasive species.”<sup>311</sup> Costs associated with controlling invasive species need to be addressed.

RESPONSE: Costs associated with controlling invasive species are included in M&O costs.

### Segmentation

It has been suggested that the state of Alaska wants to build a road to the Katzehin so that it can be extended to Skagway in the future. This was articulated during a 2008 legislative Transportation Hearing, where the following testimony was recorded: The Katzehin will be the end of the current project “though DOT&PF plans a second project to ‘hard link’ to Skagway and the national highway system.”<sup>312</sup> Evidence that this still may be the case is a USFS and DOT MOU for an easement through the Tongass National Forest beginning at Echo Cove and ending near Skagway, dated 9/22/06. This MOU occurred after the April 2006 ROD that selected a road that terminates at the Katzehin as its preferred alternative.

---

<sup>310</sup> DSEIS at 4-81

<sup>311</sup> NMFS comments 11/03/14 at 2

<sup>312</sup> Alaska State Legislature House Transportation Standing Committee Hearing, 2/12/08, at 3

The easement is dated 11/22/06 and is on file at the CBJ recorders office.<sup>313</sup> There would be no need for an easement beyond the Katzehin, unless the intent is to continue building a road to Skagway. If this is the case, the project has been improperly segmented to avoid NEPA compliance.

RESPONSE: At this time, DOT&PF has no intent to pursue extension of a road from Katzehin to Skagway. It is true that the Forest Service has incorporated three transportation/utility corridors along Lynn Canal into the Tongass National Forest Plan: (1) from Echo Cove along the shore to Skagway, with a ferry terminal near the mouth of the Katzehin River, (2) from Skagway southward along Taiya Inlet then northwesterly along Lutak Inlet to Haines, and (3) from Haines across the Chilkat River/Inlet near Pyramid Island then south to William Henry Bay. Easements for these corridors and many others in Southeast Alaska were granted by Congress in Section 4407 of the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU), as amended. The purpose of the referenced 11/22/06 Memorandum of Understanding (MOU) between the State of Alaska and Forest Service is to establish a framework and process for granting the reciprocal rights-of-way and easements described in Section 4407 of SAFETEA-LU.

### *Alternative 3*

#### Least Environmentally Damaging Practicable Alternative (LEDPA)

The EPA assessed that Alternative 3 is the LEDPA because it would provide “significant transportation improvements over the No Action alternative” and also outperforms 2B on the Juneau/Haines route.<sup>314</sup> We have already detailed the numerous ways in which the DSEIS portrays Alternative 2B in a best-case scenario, and we question whether Alternative 3 has been intentionally diminished as an alternative by withholding sufficient detail and also unnecessarily inflating costs. We believe the DSEIS claim that “all alternatives have been evaluated to a comparable level of detail”<sup>315</sup> is false.

RESPONSE: As stated previously, all of the alternatives carried through the environmental analysis have been evaluated and presented to a comparable and appropriate level of detail for making an informed decision. The Draft SEIS reported the nature and magnitude of the environmental impacts of each project alternative without bias. More detail is available for Alternative 2B because it was the selected alternative in the 2006 ROD and was moved forward to permitting and design. To not include the relevant information obtained for that corridor in years following the 2006 ROD would be disingenuous; however, to bring all alternatives to the same level information (i.e., final design) is not reasonable or necessary.

#### Avalanches

In addition to Alternative 2B having more than twice the number of active avalanche paths

---

<sup>313</sup> 2014 Appendix Z at 6

<sup>314</sup> 2014 Appendix Z Attachment A at 34

<sup>315</sup> DSEIS at ES-13

than Alternative 3 (43 versus 19),<sup>316</sup> Alternative 2B has avalanche risk that is extensive along the corridor length, whereas Alternative 3 has discrete areas of high risk. Alternative 2B has nearly double the volume of anticipated avalanche debris (47,752 versus 29,775 cubic yards),<sup>317</sup> and 22.5% more snowfall.<sup>318</sup> One would assume that operating costs for avalanche control and debris removal, therefore, would be substantially higher for Alternative 2B. But annual operating costs are fairly similar.<sup>319</sup> Further, the DSEIS does not assess the relative merits of the avalanche program selected for Alternative 3. That is, an explosive delivery system was selected for Alternative 2B that was more expensive than other options, presumably because of a real benefit of lowering the avalanche closure time by half.<sup>320</sup> For Alternative 3, a more expensive option was chosen with no apparent benefit. That is, capital costs were \$4.87 million more than a cheaper alternative with a resulting road closure decrease of only 4%.<sup>321</sup> There is the appearance that Alternative 3 costs have been inflated, making 2B appear to be more cost effective.

RESPONSE: The potential for avalanche effects to roadways has been fairly evaluated and appropriate mitigation has been proposed for Alternatives 2B and 3.

Please refer to the *Update to Appendix J - Snow Avalanche Report*, Section 13.6, Appendix 11, Operating Budget Spreadsheets, and Section 13.7, Appendix 12, Capital Budget Spreadsheets, for updated budget spreadsheets. Operating budgets for Alternative 2B are currently \$1,458,719 for Option D and for Alternative 3 are \$1,257,483 for Option H. Avalanche programs for all alternatives involve many of the same staffing, office, weather station, field equipment, and materials costs.

Alternative 3 options have been updated to avoid long howitzer shots, adding some blaster boxes or other fixed exploders. Current capital costs are \$11,185,325 for the preferred Alternative 2B option that minimizes closure time and maximizes risk reduction, and \$6,199,259 for the preferred Alternative 3 option. Capital costs include items such as blaster boxes, loaders, bulldozers, and signage to name a few of the items. Closure estimates are 12.1 days for Alternative 2B and 5.5 days for Alternative 3. The budget sheets, as updated in Appendix 11: Operating Budget Spreadsheets, contain all the details for how costs were calculated.

The key variables are explosive type and delivery method. The study presents the options; option selection is based on criteria for closure times, risk reduction, and other engineering and operational concerns.

### Alternatives Evaluation

FHWA requires that alternatives be evaluated in a “fair and balanced manner” and that “each alternative must be explored at a sufficient level of detail to support a reasoned choice”.<sup>322</sup> The Safe, Accountable, Flexible, Efficient Transportation Equity Act included changes in the environmental review process that allows for a preferred alternative to be developed at a higher level of detail, but that higher level of detail must not prejudice the fair and balanced consideration of alternatives. In this DSEIS Alternative 3 is not evaluated in a comparable manner to Alternative 2B. As one example, we know that Alternative 2B will not be built to AASHTO standards (4 foot shoulders instead of 6). Figure 2-7b shows a roadway section for 2B, but there is no such drawing for a section of Alternative 3. Therefore it is not possible to determine whether the two road alternatives would be built to the same standards. If MLOPS for Alternative 2B are unrealistic in order to increase traffic volume, but cannot actually be met as previously discussed, then Alternative 3 will have a greater capacity than 2B. Again, a fair and balanced consideration of alternatives seems to be absent.

RESPONSE: The Draft SEIS is fair and balanced. More detail is available for Alternative 2B because it was the selected alternative in the 2006 ROD and was moved forward to permitting and design.

The roadway typical section schematic (Figure 2-7b, Final SEIS) applies to all alternatives with road construction. It is not specific to Alternative 2B.

As previously discussed, the MLOPS for Alternative 2B has been revised for the Final SEIS. See *Appendix GG, Marine Segments Technical Report*, for discussion. The increase in MLOPS is accounted for in the traffic study update.

### ***Alternatives 4A and 4B***

Having a fair treatment of fast vehicle ferries in the DSEIS analysis is very important because reducing travel time is a stated purpose and need and all alternatives are compared in this regard. A McDowell study prepared for the Municipality of Skagway states that the per-mile Lynn Canal costs for the Fairweather fast vehicle ferry were lower than any other Lynn Canal vessel.<sup>323</sup> The McDowell Groups’ finding is very different from the DSEIS analysis, where fast ferry Alternatives 4A and B have the highest operating costs of any alternatives.<sup>324</sup> Since DOT often contracts with the McDowell Group, this significant discrepancy should be explained.

RESPONSE: The 2014 McDowell study indicating a low cost per mile for the *FVF Fairweather* is in error due to faulty data. Specifically, the *FVF Fairweather* is credited with 2,728 nautical miles in 5.8 days, resulting in approximately 470 miles per day. This inflated mileage for 6 days of expenses results in an artificially low cost/mile.

---

<sup>322</sup> <http://www.fhwa.dot.gov/hep/section6002/1.htm#Toc148770599>

<sup>323</sup> 2014 McDowell North Lynn Canal Ferry Service Analysis, page 7

<sup>324</sup> DSEIS ES-16

Also the DSEIS assumes that ACF ferries are “sunk costs” that “will exist for all alternatives and can be factored out of the analysis,” and “there will be no difference between alternatives on their account.”<sup>325</sup> Yet 4A and 4B do not deploy the ACF’s<sup>326</sup> and are therefore unfairly penalized in the cost analysis, rendering the comparison of alternatives invalid. That is, resources have already been committed prejudicing a decision away from selecting either of these fast ferry alternatives.<sup>327</sup>

RESPONSE: Commissioning of the Day Boat ACFs was done under a separate decision-making process and must be dealt with as part of each of the alternatives as appropriate. They cannot be utilized as part of Alternatives 4A and 4B and new fast vehicle ferries would need to be purchased.

### *Alternative 4C*

4C is our preferred alternative because it is safe and reliable, and is the most cost effective build alternative.<sup>328</sup> It meets all of the purpose and need elements, as discussed in the purpose and need section. It is also the “environmentally preferred” alternative for the Army Corps of Engineers.<sup>329</sup> Meeting all purpose and need elements, being the environmentally preferred alternative, and being practicable, also makes this alternative the LEDPA. We urge FHWA to reject the state of Alaska’s preferred alternative and instead support either Alternative 1 or 4C.

### *Other Reasonable Alternatives Not Considered*

The Washington State ferry system and the Inter-Island Ferry Authority (IFA) are subsidized at a rate of 30% where the AMHS subsidy is twice that.<sup>330</sup> Given that this information is available to DOT and was presented at the 2014 SATP public meetings, it would be reasonable for the DSEIS to have evaluated an IFA alternative for Lynn Canal in this EIS process as a way to improve service and reduce state costs.

RESPONSE: Due to the importance of the Lynn Canal link, it historically has been owned and operated by DOT&PF, instead of a non-State entity such as the Inter-Island Ferry Authority (IFA). AMHS operates under different conditions than the Washington State ferry system. Washington State Ferries has higher capacity/usage, short runs, and benefits from drive-on/drive-off in one direction, resulting in quick sailing turn-arounds. Washington State Ferries also benefits from a larger market size.

A reasonable alternative LCC previously suggested is a marine alternative that uses the same routing that the AMHS successfully used to provide Lynn Canal ferry service prior to 2004 and is still used for mainline and winter service: northbound ferries go from Juneau

---

<sup>325</sup> 2014 Appendix FF at 52

<sup>326</sup> DSEIS at ES-4

<sup>327</sup> 40 CFR 1502.2(f)

<sup>328</sup> DSEIS at ES-16

<sup>329</sup> 2014 Appendix Z at 17

<sup>330</sup> 2014 Appendix BB at 11 and 2014 SATP power point

to Haines to Skagway, and southbound ferries go from Skagway to Haines to Juneau, an efficient use of sailing time, fuel, and crew that connected all three Lynn Canal communities during the same sailing.

RESPONSE: The Juneau/Haines/Skagway/Haines/Juneau triangle route takes approximately 17 hours. When the route is run daily as a Lynn Canal shuttle, the vessel must have crew quarters and sufficient crew to run 24 hours. The Day Boat ACFs without crew quarters do not have the ability to run the triangle and return to their home port each day.

This routing is efficient only from the perspective of servicing all three ports with one vessel. It is inefficient with respect to travel time and capacity.

In 2004, AMHS routing separated summer Juneau sailings to Haines from summer Juneau sailings to Skagway, leaving no Haines/Skagway connection. This routing change involves the vessel sailing right past Haines on its way to Skagway without stopping. The 2004 routing has been adopted for all summer marine alternatives in the DSEIS (except mainline service) requiring a minimum of three day boat ferries with three separate crews, which “artificially inflates the cost of all marine alternatives.”<sup>331</sup> There has yet to be an evaluation of how this relatively new Lynn Canal configuration adds unnecessary costs to every marine alternative. This routing would be especially applicable to Alternatives 4A and B, ferries that have shorter turn-around times. Continuous routing that connects all three Lynn Canal communities currently occurs during winter.

RESPONSE: Primarily marine alternatives (4A-D) and road alternative (2B) involve a day boat connecting Juneau/Haines, a second connecting Juneau/Skagway, and a third providing the direct Skagway/Haines connection. The proposed level of service is necessary to optimize capacity.

The 2014 DSEIS continues to fail to consider legitimate reductions to capital costs for marine alternatives achieved by a vessel routing that significantly reduces fuel and crew costs. Adding a marine alternative that lowers both capital and operating costs, burns less fuel, and has no measurable adverse environmental impacts is a missed opportunity to comply with 40 CFR 1502.14 by “sharply defining the issues and providing a clear basis for choice among options.” Failure to identify and assess reasonable alternatives that avoid or minimize effects on the human environment is a clear violation of 40 CFR 1500.2(e).

RESPONSE: FHWA did not violate 40 CFR 1500.2(e). DOT&PF and FHWA examined a full range of reasonable alternatives, including Alternative 1B, which does not include up-front capital expenditures. The reasonable alternatives included avoidance and minimization measures to reduce impacts to the quality of the human environment. It is not possible to add a marine alternative that would lower capital and operating costs while reducing fuel and crew costs without adding new vessels or having a negative impact elsewhere in the AMHS system. DOT&PF examined various new vessels (e.g., fast ferries that would improve

---

<sup>331</sup> LCC 2005 SDEIS comments at 10

operating speeds), but those vessels cost more to operate.

Another option that could have been – but was not – explored is using two crews for the same vessel, to provide 24 hour operation. This could add capacity and reduce costs. For example, each ACF makes only one round trip per day for Alternative 4C, but using two crews would allow for 2 round trips using the same vessel,<sup>332</sup> freeing an ACF vessel for other AMHS routes.

**RESPONSE:** The Day Boat ACFs are not designed for continuous 24-hour service. The vessel requires time for service, such as fueling and maintenance in port.

Evaluating different routing options and different vessel choices should have been - but was not - part of the Coastwise marine consultant contract; i.e., all alternatives were already formulated by DOT and given to Coastwise for an as-is analysis.<sup>333</sup> Given that Coastwise has marine vessel expertise sought out by DOT, discretion to design efficient marine alternatives should have been granted.

**RESPONSE:** Alternatives were developed in consultation with AMHS staff. AMHS staff have considerably more experience with the ins and outs of running and optimizing the existing AMHS service than Coastwise Corporation. Coastwise Corporation is a naval architecture and marine engineering firm offering primarily vessel design, marine structural and systems analysis, and port engineering services.

To conclude, the existence of viable but unexamined alternatives renders the EIS inadequate.

### **Executive Order (EO) 12898**

EO 12898 addresses environmental justice for minority and low-income populations. Federal agencies must identify and address “disproportionately high and adverse human health or environmental effects” on these populations. This includes health, economic and social effects of federal actions.<sup>334</sup> By not having a thorough – or even accurate - analysis of impacts to walk-on passengers from dismantling public transportation in the Lynn Canal, the DSEIS ignores very real impacts in the context of EO 12898. That is, if a road is built the costs will be borne by the elderly, students, and low-income families who do not have a suitable or available vehicle. Admission of this is buried in the appendices where it is stated that “cost is a key reason people choose to travel as walk-ons.”<sup>335</sup> As previously discussed, walk-on passengers will be paying significantly more for Lynn Canal travel if Alternative 2B is implemented.

**RESPONSE:** The current surface transportation system in Lynn Canal operates like an expensive toll road, which has an impact on low-income travelers, in some cases precluding

---

<sup>332</sup> DSEIS at 2-27

<sup>333</sup> 2014 Appendix GG at 5

<sup>334</sup> DSEIS at 3-28

<sup>335</sup> Appendix EE at 126

their ability to travel outside their hometown. As indicated in the Draft SEIS, vehicle travel on the AMHS costs roughly four to six times as much as travel over the same distance on a highway (see Section 1.4.5). One of the stated purpose and need elements of the project is to reduce user costs for transportation in the corridor. FHWA has determined, based on traditional measures of environmental justice, that none of the build alternatives would have a disproportionate high and adverse effect on low-income or minority communities (see Section 4.7.2).

9.5% of Juneau households, for example, do not own a vehicle. This is true for 7.8% of Haines households and 3.5% of Skagway households,<sup>336</sup> but this number of potentially impacted households is not analyzed in the context of EO 12898. Additionally, Alternative 2B would also place a hardship on households that only have one vehicle, since it is likely that one or more household members would be home and need the vehicle to get to work, while other family members are traveling. Households that would face this situation include 35.2% of Juneau households, 45.9% of Haines households, and 34.1% of Skagway households.<sup>337</sup> These are significant populations that could be seriously impacted if Alternative 2B is implemented, yet impacts remain unanalyzed.

The preferred alternative would put an unfair burden, in terms of cost, time, and ability to travel, on people living below poverty level, since it is reasonable to assume that household income is a major factor in vehicle ownership. While all the pieces of information are presented – and primarily in the appendices - the DSEIS fails to connect the dots and includes no meaningful analysis regarding EO 12898 mandates. Instead, the claim is made that the current “high cost of travel in Lynn Canal has an impact on low-income travelers and, in some cases precluding their ability to travel.”<sup>338</sup> The DSEIS has wrongfully concluded that 2B would reduce these travel costs.<sup>339</sup> However, low-income travelers are walk-on passengers because “cost is a key reason people choose to travel as walk-ons,”<sup>340</sup> and these travelers would be precisely those most adversely impacted if Alternative 2B is implemented.

RESPONSE: FHWA did not identify a high and adverse disproportionate effect on low income or minority communities as a result of project alternatives. Reducing user costs was an element of the purpose and need statement. The alternatives evaluated in the Draft SEIS met the need for reduced user costs.

We have already discussed how costs to walk-ons increase significantly with Alternative 2B.

A meaningful analysis of EO 12898 would address equity issues concerning who benefits and who bears the costs for removing the public transportation option and building a road.

---

<sup>336</sup> Appendix EE at 127

<sup>337</sup> Appendix EE at 127

<sup>338</sup> DSEIS at 4-186

<sup>339</sup> Id.

<sup>340</sup> Appendix EE at 126

Again, “cost is a key reason people choose to travel as walk-ons.”<sup>341</sup> Instead, contrary to logic, the FHWA has determined none of the build alternatives would disproportionately affect low-income or minority populations.<sup>342</sup>

RESPONSE: Per the comment, additional cost information and impacts to low-income and/or minority walk-on passengers have been supplemented in the Final EIS at Section 4.7.2.

### **AMHS Fare Structure**

Despite the state’s pathetic attempt to create a TSM alternative as previously discussed, a true TSM alternative is still missing. A true TSM alternative would incorporate options that maximize efficiency of the existing system with little or no new construction.<sup>343</sup> Maximizing efficiency in the absence of an AMHS rate structure analysis is an impossible task. That the Juneau Access EIS is going forward in advance of the completion of this analysis - due to be released next February<sup>344</sup> –is absurd. A 2014 McDowell study shows huge disparities between AMHS fares in Southeast Alaska, which indicates arbitrary fares and system-wide inefficiencies. For example, adult Haines-Skagway per nautical mile fares are the highest in the system at \$2.38. Conversely, Petersburg-Sitka fares are only 29 cents per nautical mile. This is a difference of 1,000%. Haines-Skagway vehicle fares are also the highest at \$3.77 per nautical mile, with Petersburg-Sitka fares at 60 cents per nautical mile.<sup>345</sup> For some unexplained and therefore mysterious reason, Haines-Skagway fares will be drastically reduced on Alternative 2B. Continuing to ignore an erratic and nonsensical AMHS rate structure while at the same time advocating that the AMHS is too costly to maintain and operate is arbitrary and capricious. One only needs to look at the fare comparison chart presented in the McDowell Report<sup>346</sup> to ascertain the arbitrary nature of the fare schedule.

This is particularly egregious because the need for a “comprehensive analysis” for an equitable fare system to reduce AMHS costs was identified 15 years ago in the 1999 SATP.<sup>347</sup>

RESPONSE: Regarding the suggestion that Alternative 1B is not a true TSM alternative, the purpose and need for the project is not to maximize the efficiency of the AMHS operations system-wide. That said, the Draft SEIS did not fail to address the comparative needs and capabilities of the vessels across the AMHS system.

Appendix CC explains how Alternative 1B was developed and describes why certain vessels are needed on certain routes. DOT&PF established as a goal that the new alternative would

---

<sup>341</sup> Appendix EE at 126

<sup>342</sup> DSEIS at 4-186

<sup>343</sup> LCC 2005 SDEIS comments page 10, citing 2005 SDEIS at 2-7

<sup>344</sup> 8/20/14 letter from FHWA to Mayor Mark Schaefer, DSEIS Chapter 7

<sup>345</sup> 2014 McDowell North Lynn Canal Ferry Service Analysis, page 5

<sup>346</sup> Id. at 6

<sup>347</sup> 1999 SATP at 68

need to meet the purpose and need in Lynn Canal but not by diminishing service elsewhere in the system. As explained in Appendix CC, DOT&PF considered technical capabilities of the vessels, vessel size, operating conditions, and the effect on the AMHS mission (i.e., could a vessel be moved or shared with other routes such that it could provide Lynn Canal service while also maintaining the level of service committed to the other communities).

In part, vessels were rejected as being reasonable for Lynn Canal service because it was found that reassigning vessels to Lynn Canal would be at the expense of reduced service elsewhere. To this extent, DOT&PF did consider demand and capacity on the other routes in the system. As explained in Appendix CC of the Draft SEIS, seven of the 11 existing AMHS ferries are not suitable for use in Lynn Canal because relocating/diverting the ferry to Lynn Canal would jeopardize the AMHS mission, including impacts on demand, level of service, and schedule considerations.

DOT&PF evaluated every vessel in its fleet to try to identify those that could reasonably be relocated or share service within Lynn Canal. It is important to note AMHS other DOT&PF professionals regularly evaluate the demand, capacity, and efficiency of the overall system. Schedule changes are made, based on a system analysis of demand and community needs. In particular, because the operation and maintenance of the AMHS system is funded out of the State's general fund, there is great scrutiny and pressure to optimize the efficiency of the service and minimize the costs. The planning that is undertaken, as well as annual schedule and funding discussions, occurs with much involvement from the public and elected officials. DOT&PF contends that this regular planning process, operational funding scrutiny, and annual scheduling process results in a system that is already highly optimized. Despite this, DOT&PF took a hard look at each of the vessels in the fleet and identified and disclosed the reasons vessels were or were not reasonable to consider for Lynn Canal Service. DOT&PF then identified a reasonable "system management" alternative and fully evaluated it in the Draft SEIS.

DOT&PF and FHWA are not ignoring the AMHS rate structure study. The *AMHS Tariff Analysis* was completed in January 2015 and was made publicly available on the AMHS website. The fare study examined AMHS tariff rates and tariff rates for similar ferry systems. The study looked at changes in fares made since the previous rate study was completed in 2008. It also looked for anomalies on routes of similar length within the AMHS system. It considered the development and implementation of changes in tariff policy with the goal of creating a fair and equitable tariff structure. The study did not analyze demand or service to identify inefficiencies. DOT&PF and FHWA have determined that the results of this study do not have an impact on this project.

DOT&PF and FHWA did explain how fares were set and the reasons for reducing fares to Haines and Skagway under Alternative 2B. For the No Action Alternative and Alternatives

4A and 4C, the fares were based on 2012-2013 AMHS rates in the Draft SEIS. For new routes that were shortened versions of existing AMHS routes, the AMHS fares were prorated by distance traveled. For new routes less than 20 miles, fares were based on a flat fee to board the vessel and a cost per mile for the transit for both passengers and vehicles. These fares were lower than the existing AMHS fares due to the efficiencies generated from vessels designed and operated as drive through loading and unloading dayboats without reservations. Fares are commensurate with similar ferry systems in other locations operated in a similar fashion. The methodology for assigning fares is described in Appendix A of the *Revised Traffic Forecast Report* (Appendix AA of the Final SEIS).

### **Bald Eagles**

According to United States Fish and Wildlife Service (USFWS) for Alternative 2B “almost every eagle nest tree buffer (37 out of 40) is likely to be impacted between Berners Bay and the Katzehin River. . . . Highway construction through most of the 330 foot buffer zones would result in long-term degradation of nesting habitat (permanent loss of nest areas) and productivity along Lynn Canal. For bald eagles, alternative nesting opportunities are very limited along Lynn Canal, due to the steep terrain and nearby glacial fields. Thus, eagles displaced by road construction will have limited opportunity to locate suitable nest trees.”<sup>348</sup> The number of nests impacted has been updated for the 2014 DSEIS, with a large increase in the number of potentially affected nests since 2006.<sup>349</sup>

According to the USFWS, “FHWA would apply for eagle take permits” when constructing within 660 feet of nest trees and blasting within .5 mile. It is assumed that these takes are “permanent.”<sup>350</sup> The impacts to bald eagles were more thoroughly discussed in our 2006 FEIS comments and we incorporate those into the record by reference.

RESPONSE: Thank you for pointing to the United States Fish and Wildlife Service (USFWS) record of comments on the JAI Project with respect to bald eagle impacts. Section 4.3.13 of the Final SEIS describes the effects of Alternative 2B on fish habitat and potential impacts to the commercial and sport fisheries.

### **Essential Fish Habitat (EFH)**

The DSEIS determined the build alternatives may have a potential adverse effect on all five species of pacific salmon during all life phases.<sup>351</sup> If this does occur, there would be economic repercussions to commercial and sport fisheries, yet there is no analysis of potential impacts. In “40 Most Asked Questions,” when there is a potential for harm “the responsible agency must disclose and consider the possibility of the loss of the commercial or sport fishery.”<sup>352</sup>

---

<sup>348</sup> 2006 FEIS at 7-64, emphasis added

<sup>349</sup> 2014 DSEIS at ES - 17

<sup>350</sup> 2/1/12 FWS scoping comments at 2

<sup>351</sup> DSEIS section 3.3.2.1.

<sup>352</sup> 46 Federal Register 18026 to 18032 (Mar. 23, 1981)

RESPONSE: Section 4.3.13 of the Final SEIS was updated to describe the potential effects of Alternative 2B on fish habitat and potential impacts to the commercial and sport fisheries. The five species of Pacific salmon were identified as potentially affected species during preliminary consultation with NMFS to determine the scope of field surveys in 2003 (Section 3.3.2.1 of the Draft SEIS). The impact analysis for marine and freshwater habitat and species, including EFH, under the build alternatives determined that there would be no measurable effect on regional populations of any fish species.

The analysis provided in the Draft SEIS indicated that no loss to the commercial or sport fishery would occur (Sections 4.3.13, 4.4.13, 4.5.13, and 4.6.13 of the Draft SEIS); therefore, no additional mitigation is proposed beyond the measures agreed to by the NMFS related to impacts to EFH.

Since our marine resources are economically and socially integral to the communities impacted by this proposed project, potential significant impacts need to be seriously addressed.

The environmental documents related to the DSEIS are extremely weak when considering the importance of nearshore marine rearing habitat for salmonids. A prime example of the failing to take a hard look at impacts is the DSEIS statement that the operation of the Katzehin ferry terminal “would not affect Pacific salmon, Pacific herring, or eulachon because of the spatial separation of the terminal from the Katzehin River and other areas of Lynn Canal important to these species.”<sup>353</sup> The most informative statement found addressing the marine ecology of juvenile salmonids reads: “The young salmon feed and grow to maturity in saltwater.”<sup>354</sup> It is as though the millions of juvenile salmon that leave the productive fresh water spawning and rearing habitat of Lynn Canal are instantly far at sea, never occupying the shorelines that this proposed project will impact.

RESPONSE: The importance of nearshore habitat is addressed in the Draft SEIS. Areas of nearshore habitat that are considered high value EFH areas were avoided as determined in coordination and consultation with the Alaska Department of Fish and Game (ADF&G), USFWS, and NMFS. The Draft SEIS described the presence of marine habitat and anadromous species in Sections 3.3.2 and 3.3.4 and the potential impacts to these resources for each alternative in Chapter 4. Section 3.3.2.1 of the Final SEIS has been updated to indicate that the Katzehin River also supports eulachon. Chapter 4 of the Final SEIS has also been updated to include potential effects on the larval stage of eulachon from Alternatives 2B, 3, 4B, and 4D.

The addition of fill proposed since issuance of the 2006 ROD in intertidal and subtidal areas was proposed to address concerns related to scour at the Katzehin River bridge abutment for Alternative 2B. This would result in placement of additional materials and an overall

---

<sup>353</sup> DSEIS, Section 4.3.13

<sup>354</sup> 2005 Appendix N at Section 4.4.1

increase of 0.64 acre of fill within the Katzehin River intertidal area, 0.55 acre of which would affect EFH. Construction and long-term effects to EFH from the ferry terminal north of the Katzehin River are evaluated in Sections 5.4.1.2, 5.4.2.3, and 5.4.2.4 of the *2004 Essential Fish Habitat Assessment* and Sections 2.1.1 and 2.1.2 of the *2005 Addendum to Appendix N - Essential Fish Habitat Assessment*. Per your comment, the site-specific effects of the increased fill on EFH in this area are described in Section 4.3.13 of the Final SEIS. The realignments of Alternative 2B since 2004 have reduced EFH impacts associated with highway fill and crossing structures for the Antler, Berners/Lace, and Katzehin Rivers. As stated in Section 4.2.2 of the *2014 Update to Appendix N – Essential Fish Habitat Assessment*, 25.5 acres of intertidal and subtidal fill is a small portion of the available habitat in Lynn Canal and would have minimal effects on the EFH available in Lynn Canal.

Studies conducted in Lynn Canal in the early 1980s specifically identified the east shoreline of Lynn Canal as critical habitat for juvenile salmon.<sup>355</sup> This shoreline serves as the **essential migration and foraging habitat for all species of juvenile salmon emigrating from Lynn Canal**. The complex environment of the shoreline provides both refuge and a rich source of prey for the juvenile salmon. No study of the impacts of a road along the shoreline of Lynn Canal can be complete if it does not consider the juvenile salmonids' dependency on the health of this shoreline. The shoreline surveys described in the DSEIS did not include any attempt to determine if the impacted intertidal areas were critical to or utilized by juvenile salmonids. Extensive determination of the type of wetland was conducted for this project, yet the variation in habitat value for the equally critical intertidal areas was not determined at all. There is no way to determine if the areas proposed to be filled are critical feeding or refuge areas for migrating juvenile salmonids. This needs to be determined before it can be stated that the proposed loss of 36.45 acres of intertidal habitat will have no impact on salmonids.

RESPONSE: Nearshore habitat was evaluated for use by salmon species in Section 4.4.1 of the *2005 Appendix N - Essential Fish Habitat Assessment*. Salmon use nearshore migration corridors throughout Lynn Canal to migrate to spawning and rearing grounds in streams that feed into Lynn Canal. The loss of near shore habitat associated with and potential effects to juvenile salmon are presented in Section 4.2.2 of the *2014 Update to Appendix N – Essential Fish Habitat Assessment*, Section 2.1.2 of Attachment A – *2005 Addendum to Appendix N*, and 5.5.2 of the *2005 Appendix N - Essential Fish Habitat Assessment*. The placement of fill would eliminate existing EFH.

Recolonization by intertidal and subtidal species would be affected due to changes in the available substrate, thereby reducing its value as foraging habitat for EFH species. Therefore, depending on the individual area's use by EFH for spawning, rearing, and/or growth to maturity and its ability to recolonize, the direct effects on marine EFH of placing in-water fill in specific intertidal and subtidal zones would be realized in Lynn Canal,

---

<sup>355</sup> Karns, 1981, 1982, and 1983. These studies were previously provided with our 2005 comments and we incorporate them by reference. If duplicate copies are needed, please let us know.

including for salmonid species using these areas. However, relative to the total available EFH in Lynn Canal, this fill would not affect regional populations of fish or invertebrate species or the overall quality of available EFH.

The 2005 SDEIS, surveys investigating the subtidal fill/sidecasting sites along the East Lynn Canal highway alignment found that “unidentified fish were observed at most every site.”<sup>356</sup> The species composition of these observed fish was never determined, and the shoreline surveys conducted for the latest DSEIS also contained references to “unidentified fish.”

A thorough analysis would include an evaluation that determines which areas are most essential to these fish. The nearshore environment of Lynn Canal definitely provides habitat that is necessary for the feeding and growth to maturity of salmonids. This includes both the intertidal and subtidal zones.

RESPONSE: Although not all species were identified during the surveys, the assessment presented in Section 4.2.2 of the *2014 Update to Appendix N – Essential Fish Habitat Assessment*, Section 2.1.2 of Attachment A – *2005 Addendum to Appendix N*, and Section 4.3.13 and 4.4.13 of the Draft SEIS provided an evaluation of effects representative of fish species known to occur in Lynn Canal and its tributaries. FHWA regards the analysis contained in these documents to be sufficient for characterizing impacts to these resources and making an informed decision for the project. Consultation with NMFS, as part of the EFH assessment and Endangered Species Act (ESA) Section 7 consultation, led to agreement with the use of representative species to assess potential impacts to aquatic species.

The eulachon that spawn in the Chilkoot, Chilkat, Taiya and Skagway Rivers are of primary importance to the juvenile salmon foraging along the eastern shoreline of Lynn Canal. The larvae of these fish are likely dispersed along the eastern shoreline of Lynn Canal: “Surveys conducted in British Columbia show that larvae disperse from relatively small spawning areas to an area of 10 km<sup>2</sup> to 1000 km<sup>2</sup>, but appear to be retained in inlets, with often higher densities observed on the seaward side of inlets.”<sup>357</sup> The dispersal of the eulachon larvae coincides with the migration of juvenile salmonids through this area:

Little specific information exists on the larval and juvenile distribution and abundance of eulachon in Lynn Canal, although Haldorson et al. (1990) noted the seasonal abundance of larval eulachon in Auke Bay coincident with spring peaks in copepod abundance. Eulachon were the most abundant larval fish collected in Auke Bay by oblique Tucker trawls (0.505-mm mesh) from mid-March to mid-June during 1986 and 1987.<sup>358</sup>

---

<sup>356</sup> 2005 Appendix N at Section 5.2.1

<sup>357</sup> 2005 Appendix N, Attachment C “Foraging Fish Evaluation” at Section 3.2.1

<sup>358</sup> 2005 Appendix N, Attachment C at Section 3.2.2

Since fish prey make up from 30 to 75 % of the diet of juvenile salmonids<sup>359</sup> they are essential to the survival of all species of juvenile salmon. A reduction in the number of eulachon larvae available to the juvenile salmon would directly result in a decrease in the number of juvenile salmon that Lynn Canal is able to support.

As yet no studies have been conducted to determine the impact of the proposed road and ferry terminals on the larval stage of Lynn Canal eulachon. The consultants hired by DOT have clearly stated that eulachon are vulnerable to just the sort of habitat alterations the east side road will incur: “Both Pacific herring and eulachon have life history stages that make them vulnerable to a variety of environmental hazards, in particular to impacts along shorelines and in watersheds that affect nearshore physical processes and habitat structure.”<sup>360</sup>

At this time, there is too little information on the marine distribution of larval and juvenile eulachon distribution to allow for a determination of the extent of the impact to these fish. It is irresponsible to put this valuable and critical resource at risk.

RESPONSE: Sections 4.3.13, 4.4.13, and 4.6.13 of the Final SEIS have been revised to identify potential effects of Alternatives 2B, 3, 4B, and 4D on the larval stage of eulachon in Lynn Canal.

Nearshore impacts have also been inadequately discussed. According to the 2014 DSEIS, Alternative 2B would result in the loss of 36.45 acres of essential fish habitat (EFH) that will directly affect the ecology of the nearshore habitat of Lynn Canal. This includes 25.48 acres filled for the highway, 6.57 acres filled for the Katzehin Ferry Terminal and 4.40 acres dredged for the Katzehin ferry mooring basin. The DSEIS states that “Because of the small amount of intertidal and subtidal habitat that would be filled by Alternative 2B relative to the total available, this impact would not affect regional populations of any fish or invertebrate species.”<sup>361</sup> In presenting this acreage as the only area of impact resulting from the intertidal construction activities, the DSEIS failed to consider the information presented in the 2005 “Foraging Fish Evaluation”:

Indirect impacts can result from structural shoreline modifications that permanently alter physical processes. Chronic changes in regional hydrology alter wave energy and current patterns, obstruct littoral drift and longshore sediment transport, and cause fluctuations of temperature, salinity, and water levels. In turn, these changes can further alter substrate characteristics and beach morphology and affect biological resources and processes, such as changes in vegetation, primary production, food-web dynamics and predator-prey interactions.<sup>362</sup>

A table in the same section the document lists the following indirect and cumulative effects:

---

<sup>359</sup> Landingham and Sturdevant, 1998, submitted with LCC’s 2005 comments

<sup>360</sup> 2005 Appendix N, Attachment C, Section 5.2

<sup>361</sup> DSEIS at Section 4.3.13

<sup>362</sup> 2005 Appendix N, Attachment C “Foraging Fish Evaluation” at section 4.3

### **Indirect Permanent Effects**

- Downtide Permanent Effects from Sediment Impoundment
- Modifications of Groundwater Regime
- Hydraulic Effects from Armoring
- Increased Energy Seaward of Armoring
- Reflected Wave Energy from Other Structures
- Dry Beach Narrowing/End Wall Effects
- Substrate Winnowing/Coarsening
- Beach Profile Lowering/Steepening
- Potential During Storm Effects
- Sediment Storage Capacity Changes
- Loss of Organic Debris
- Downtide Effects of the Above

### **Cumulative Effects**

- Incremental Increases in All Effects
- Effects to Single Dredge Sectors
- Downtide Sediment Starvation
- Potential Threshold Effects

It is clear from this information that the DSEIS has still not determined the amount of EFH that this project will truly impact. In addition to the direct effects of the burial or excavation of intertidal and subtidal habitats, the structural modification along the Lynn Canal shoreline will alter important physical processes. The determination of the full impact of the effects of these structural modifications may well result in measurable impacts to the fish populations in Lynn Canal.

It is also stated that it will be necessary to build temporary barge ramps along the shores of Lynn Canal to allow for the “access of upland field camps.”<sup>363</sup> No information is given for how long these ramps will remain in place, other than a statement that they will eventually be removed. What is the EFH impact of these facilities, including the indirect impacts noted above, where applicable? Where is a detailed plan, including a timeline, for the post-construction recovery of these sites?

The Magnuson-Stevens Conservation and Management Act defines essential fish habitat as “waters and substrate necessary for fish for spawning, breeding, feeding, or growth to maturity.” We contend that, given that the intertidal areas are necessary for the feeding and growth to maturity of eulachon and all five species of salmon, then all the area impacted by the barge ramps should be considered EFH.

RESPONSE: Section 4.3.13 of the Final SEIS has been updated to include potential indirect effects to fish from shoreline modifications due to placement of fill associated with the highway alternatives. The impacts to EFH from construction and operation of Alternative 2B are presented in Section 4.2.2 of the *2014 Update to Appendix N – Essential Fish Habitat Assessment* and Section 2.1.2 of Attachment A – *2005 Addendum to Appendix N*.

---

<sup>363</sup> DSEIS, section 4.8.12.7

Information from these reports is incorporated into Sections 4.3.13 and 4.8.11 of the Draft SEIS. In addition, Section 4.8.11 of the Final SEIS includes an evaluation of the effects of the temporary barge ramps on eulachon. Mitigation planning and timing for post-construction recovery would be developed in conjunction with the agencies if this alternative were selected.

**We restate for emphasis:** The intertidal and subtidal areas along the shoreline of Lynn Canal are necessary for the feeding and growth to maturity of juvenile salmon and eulachon.

We disagree with the following dismissal of impacts to intertidal and subtidal habitat:

Placement of in-water fill in 25.5 acres for highway construction would bury all intertidal and subtidal organisms at the specific fill locations and alter the habitat. Intertidal and subtidal invertebrate species are opportunistic, and the slopes of fill areas would likely be colonized by similar intertidal and subtidal species over a few seasons. However, because the amount and character of the area available for recolonization would be different from the undisturbed intertidal and subtidal zone, recolonization would not restore the community to its original state, reducing its value as foraging habitat for commercial fish species. Because of the small amount of intertidal and subtidal habitat that would be filled by Alternative 2B relative to the total available, this impact would not affect regional populations of any fish or invertebrate species.<sup>364</sup>

It is simply not true that a “small amount” of intertidal and subtidal habitat will be filled by Alternative 2B. The true impact of the extensive fill proposed under this alternative would be measurable and would affect regional populations of fish and vertebrate species. Building 2B would conflict with the intent of the Magnuson-Stevens Fishery Conservation and Management Act, which “calls for direct action to stop or reverse the continued loss of fish habitats.”<sup>365</sup>

**RESPONSE:** Sections 4.3.13 and 4.4.13 of the Draft SEIS included analysis of the potential for recolonization in the intertidal and subtidal areas following construction of the road alternatives. Species that recolonize these areas would continue to provide foraging habitat for commercial fish species at a similar level and value as the original species. In addition, the loss of intertidal and subtidal habitat represents less than 1 percent of the overall habitat in Lynn Canal and would not affect regional populations of species that depend on these areas.

FHWA has coordinated with NMFS on the project since 1994, and continues to coordinate with the NMFS on the EFH assessment, ESA Section 7 consultation, and Marine Mammal Protection Act authorization (eulachon and herring are prey species for ESA listed species

---

<sup>364</sup> DSEIS, section 4.3.13EO 11990

<sup>365</sup> DSEIS at 3-56

and marine mammals). NMFS provided comments on the Draft SEIS EFH Assessment<sup>366</sup> requesting minor clarifications. The EFH Assessment is updated by errata and included in the Final SEIS.

“Executive Order 11990, Protection of Wetlands, mandates that federally funded projects are to avoid construction in wetlands unless (1) there is no practicable alternative and (2) the proposed action includes all practicable measures to minimize harm to wetlands.”

Practicable alternatives are available and capable of being done after considering cost, existing technology and logistics.<sup>367</sup> As previously discussed, all marine alternatives meet the purpose and need and would improve surface transportation in the Lynn Canal. Practicable alternatives include 1, and 4A, B, C, and D. Alternative 2B would compromise wetland values for groundwater recharge, wildlife habitat and nutrient transport. Fill “would reduce these wetland functions to zero.” Habitat value for wildlife might be regained, but not wetland functions. “The continued presence of humans and equipment would ensure that the project site was devoid of all habitat values, or ‘zero function’.” This “would be permanent.”<sup>368</sup> Given the existence of many practicable alternatives with less impacts to wetlands, the selection of Alternative 2B violates EO 11990.

RESPONSE: FHWA and DOT&PF have identified Alternative 1 – No Action as the preferred alternative. It would not result in impacts to wetlands and is consistent with Executive Order 11990.

## Conclusion

We support Alternatives 1 and 4C. The DSEIS, however, is so fatally flawed, that a new document should be prepared and be subject to public review and comment prior to a Record of Decision. Our reasons for a new environmental document include:

- Inadequate, faulty and biased comparison of alternatives
- Inadequate, faulty and biased methodologies and assumptions
- Failure to take the required “hard look.”
- Inadequate purpose and need statement
- Inadequate treatment of significant new information

RESPONSE: FHWA and DOT&PF have updated information in the Final SEIS to include newly available data, correct errors and omissions, or in other ways respond to comments on the Draft SEIS, as appropriate. The document is comprehensive and complete. No new studies or additional interpretations of project data are needed. There is no need to prepare a separate new document for public review. Per 23 USC 139(n)(2), FHWA developed and approved a combined Final SEIS and Record of Decision.

Thank you in advance for your careful consideration of our comments.

LCC 2006 Juneau Access FEIS comments

In addition to these exhibits that we are adding to the administrative record, we believe the DSEIS should have also included the following two documents in the DSEIS index for the administrative record:

- 1) The 2004 SATP is the official Southeast Alaska Transportation Plan until the 2014 draft SATP is revised and adopted. As such the 2004 SATP should have been referenced in the index and belongs in the administrative record.
- 2) Let’s Get Moving, 2030 is the state transportation plan and should also be part of this administrative record.

Re: Federal Project No. STP-000S(131) and ADOT&PF Project No. 71100

Dear Administrator Garcia-Aline and Commissioner Kemp:

Please accept the following timely comments from the Southeast Alaska Conservation Council (SEACC) on the draft supplemental Environmental Impact Statement (DSEIS) for the so-called "Juneau Access Improvements Project" prepared by the Alaska Department of Transportation (ADOT&PF) in cooperation with the Federal Highway Administration (FHWA). The ostensible purpose for the more aptly named "Katzehin Road Project" is to consider alternative means of improving surface transportation between Juneau and Haines/Skagway.

Over the past 20 years, SEACC has participated fully, and in good faith, in the three separate NEPA processes conducted jointly by the FHWA and ADOT&PF on this project. We submitted scoping comments, reviewed and commented on draft and final EISs, and obtained independent expert analysis relating to project costs, traffic demand forecasting, and user benefit analysis. By this reference we incorporate all previously submitted comments and exhibits into the planning record for the 2014 DSEIS.

The preferred alternative selected by the ADOT&PF calls for the construction of a two-lane, 48-mile road along the East Lynn Canal route that would desecrate the ancestral lands of the Auk Kwan,<sup>1</sup> the original settlers of Juneau, and unnecessarily degrade Berners Bay, the Congressionally-designated Legislated Land Use Designation II (LUD II) wildland. The proposed road would cross 41 avalanche chutes and over 100 identified geologic hazards before dead-ending at a new ferry terminal on the uninhabited Katzehin River delta across Lynn Canal from Haines, Alaska, about 1,000 miles from Anchorage. The \$574 million road extension is intended to replace existing community-to-community ferry service with an expensive, dangerous, and unreliable road-ferry hybrid.

---

<sup>1</sup> See Miller, Rosa *Letter to the Editor: Preserve traditional/and from development*, Juneau Empire (June 14, 2014).

This DSEIS represents the third attempt by your agencies over the last 20 years to disclose and evaluate the economic, social, and environmental effects of this proposal and demonstrate that its approval is consistent with fiscal constraint requirements for transportation decision making and is in the public's interest. This time, despite continued efforts to distort objectivity by inflating traffic demand estimates, misusing traffic forecast models to favor the Preferred Alternative,<sup>2</sup> and applying contingency cost factor that is too low at this preliminary planning stage,<sup>3</sup> the numbers don't lie - Alternative 2B is a huge money loser and its economic costs vastly outweigh all its benefits. *See* Erickson, Gregg, *CON: Road makes no economic sense*, The Road, Juneau Empire (Nov. 25, 2014).

For the reasons described below, SEACC urges the FHWA to reject the State of Alaska's preferred alternative. The most practical and economically feasible way to facilitate safe and reliable transportation between Juneau, Haines and Skagway at a price that can be afforded, including improving the movement of freight, is to redeploy existing assets in the most productive way and expand ferry capacity at a price that can be afforded to match reasonably derived traffic demand. Alternatives 1B Optimized<sup>4</sup> and 5,<sup>5</sup> the All Alaska Class Ferry Alternative, were developed by the Skagway Marine Advisory Committee in response to the DSEIS. We believe both of these alternatives meet this project's purpose and need and deliver more practical and economically sustainable surface transportation improvements for the Lynn Canal corridor than Alternative 2B.<sup>6</sup>

#### I. THE PREFERRED ALTERNATIVE IS UNREASONABLE BECAUSE IT DOES NOT SATISFY THIS PROJECT'S PURPOSE AND NEED.

The purpose and need for this project "is to provide improved surface transportation to and from Juneau within the Lynn Canal corridor ...." DSEIS at 1-10. Unfortunately, Alternative 2B does not improve transportation opportunities for Lynn Canal residents.

RESPONSE: While Alternative 2B is not identified as the preferred alternative in the Final SEIS, Sections 2.3.3 and 4.3.7.2 of the Draft SEIS explain that Alternative 2B would provide improved transportation opportunities for Lynn Canal residents. Alternative 2B would provide 56 ferry round trips per week from Katzehin to Haines during the summer, while Alternative 1 – No Action would provide only 8 trips per week between Auke Bay and Haines. In the winter, Alternative 1 – No Action would provide only 6 ferry round trips per week between Auke Bay and Haines, while Alternative 2B would provide 42 ferry round trips per week. Similar increases for travel between Juneau and Skagway are also reported in the Draft and Final SEIS.

<sup>2</sup> *See generally* Marshall, Norman, Review of the Juneau Access Improvements Draft Supplemental Environmental Impact Statement, Smart Mobility (Nov. 2014)(hereinafter "Marshall"); Rogers, George W., The Alaska Marine Highway System at 16 (Univ. of Alaska, Institute of Social, Economic and Government Research)(Oct. 1970)(reflecting on "Numerous transportation studies ... under the sponsorship of agencies with built-in biases for particular modes of travel, generally pro-highway.").

<sup>3</sup> *See* Herrera Environmental Consultants, Inc., Memorandum, Review of Draft Supplemental Environmental Impact Statement- Juneau Access Improvements Project at 2-3 (Nov. 21, 2014)(hereinafter "Herrera").

<sup>4</sup> The Alternative 1B Optimized was prepared by the Skagway Marine Access Commission and submitted with its November 20, 2014 comments on the DSEIS. By this reference we incorporate this more efficient approach to enhanced ferry service in Lynn Canal into SEACC's comments on the DSEIS.

<sup>5</sup> By this reference, SEACC incorporates the "All Alaska Class Ferry Alternative" into these comments.

<sup>6</sup> For the record, SEACC has also joined the comments submitted by Earthjustice on behalf of a number of local, regional, state and national groups in opposition to the preferred alternative identified by FHWA and AKDOT&PF for this project.

The DSEIS does not identify any economic benefits from constructing the Katzehin road, like reduced freight costs or more industry.

RESPONSE: The Purpose and Need does not include the need to provide economic benefits like reduced freight costs or more industry; therefore, that is not factored into whether any of the alternatives are reasonable. The Purpose and Need does, however, identify the need to reduce State and user costs, and reports the results of that analysis in Table ES-1.

Furthermore, the Draft SEIS does discuss the implications of the build alternatives relative to economic impacts and benefits. The *Socioeconomic Effects Technical Report* (Appendix EE) and Socioeconomic sections (4.3.5, 4.4.5, 4.5.5, and 4.6.5) of the Draft SEIS explain the possible economic impacts of project alternatives.

The highway alternatives (2B and 3) were projected to have had a greater beneficial effect on the economies of Lynn Canal communities than marine alternatives. This would have resulted from a projected increase in tourist traffic, which would have increased spending and jobs in Lynn Canal communities. Highway alternatives would have also reduced transportation costs. Improved transportation resulting from the highway alternatives may have impacted some small businesses by providing access to competing businesses in other locations, but would have also provided more potential customers for new and existing businesses. It is likely that the higher frequency and low costs of the short shuttle links associated with these alternatives would have generated some truck shipping of fresh fish and other products. In addition to the temporary highway construction jobs that would have been created, both highway alternatives would have had a three-vessel shuttle system in Lynn Canal with permanent ferry crew jobs as well as permanent highway maintenance and seasonal avalanche control jobs.

The purposes of improving capacity and flexibility are ostensibly intended to mean better service of the travel needs and desires of residents living along the Lynn Canal (as the three hours in time savings will not make a significant difference for people driving for two days from Anchorage or three days from Seattle). This objective is clearly not met given that the communities have consistently and vocally opposed construction of a road along the Lynn Canal and repeatedly stated a preference for improved ferry service:

- The Haines Borough passed resolutions from 1997, 2004, and 2006, as well as sent letters to legislators and ADOT&PF in 2014.
- Skagway passed a resolution in 2003, voted against a road in 2004 vote and submitted comments to ADOT&PF in 2014.
- In 2000 Juneau narrowly voted to improve ferries over constructing the Juneau road and public opinion has remained heatedly divided ever since.

In addition to this overwhelming public opposition, we submit for the record a petition opposing construction of the proposed road signed by nearly 2,000 people opposing the Juneau road extension and a compilation of recent news articles outlining the local opposition to the project.<sup>7</sup>

If the primary goal of this project is to improve transportation for residents of the Lynn Canal,

---

<sup>7</sup> See Change.org Petition, Southeast Alaska Conservation Council (2014) and Compilation of recent media from the Juneau Empire, Chilkat Valley News, and Skagway News (2014).

than considering the voluminous opposition, ADOT&PF has clearly missed its mark.

Since this project began in the early 1990's, ADOT&PF and the FHWA have tried to skew this process in favor of their Preferred Alternative by including cost components in the stated purpose and need for this project. Despite repeated objections from the public and reviewing agencies, ADOT&PF and FHWA stubbornly kept the reduction of State and user transportation costs as fundamental components of this project's purpose and need. This example of agency obstinacy has today become this project's Achilles heel. While an agency has considerable discretion to define the purpose of its proposed action, it would be unreasonable and impracticable to allow an agency to select an alternative that does not bring about the outcome intended. As revealed in the Executive Summary of the DSEIS, the Preferred Alternative will cost the State of Alaska \$5 million dollars more each and every year than needed to maintain the existing ferry service. *See* DSEIS, Table ES-1 at ES-16. The DSEIS further explains that "the net cost to the State of Alaska of Alternative 2B during the analysis period would be about \$193 million more than the No Action Alternative." DSEIS at 4-61. Clearly, the Preferred Alternative does not meet the purpose and need for tills project.

RESPONSE: DOT&PF and FHWA object to the characterization that they have tried to "skew" the process in favor of one alternative over another. DOT&PF and FHWA have been consistent in the needs described in the purpose and need for the project. Solving the transportation problems documented in the Purpose and Need chapter, and doing that in a way that reflects the operating and maintenance budgetary constraints of DOT&PF, remains an important part of project development.

The purpose and need for the project consists of five components (capacity, flexibility and opportunity to travel, reduced travel time, reduced State cost, and reduced user costs). Each alternative meets the five purpose and need components to a different degree. No alternative best meets all five components. The reasoning behind the identification of Alternative 2B as the preferred alternative in the Draft SEIS was provided in the Executive Summary and in Chapter 2 of the Draft SEIS under the heading "Identification of the Preferred Alternative" (Sections ES-7 and 2.5, respectively).

While DOT&PF and FHWA consider all input, NEPA decisions are not based on a vote but rather an objective evaluation of the facts. The decision is strongly based on how well an alternative satisfies the Purpose and Need for the project (see Chapter 1).

As presented in Table ES-1 of the Draft SEIS, Alternative 2B accommodated the highest demand, provided the greatest capacity, had the shortest travel times, provided the greatest frequency of service, had the lowest cost per vehicle transported, and had the second lowest operations and maintenance costs of any of the build alternatives. It was identified in the Draft SEIS as preferred, taking into consideration these benefits as well as the impacts described throughout the document and appendices.

Due to declining State finances, the preferred alternative has been changed to Alternative 1 – No Action in the Final SEIS. This decision was based in part on the challenging economic conditions as well as the controversy mentioned by the commenter. The rationale for the change in preferred alternative is discussed in Section 2.5 of the Final SEIS.

Incredibly, the DSEIS doesn't adequately address user costs, even though it is a purpose of the project. Rather, the DSEIS focuses entirely on vehicle costs, ignoring almost entirely the critical function the current community-to-community ferry system serves as a transit system for walk- on passengers. A 2000 study prepared for the AMHS and & ADOT&PF by the McDowell Group found

that walk-on travelers *account for 45% of travel on the ferry system.*<sup>8</sup> Remarkably, we could not find any reference to tills relevant study in the 2005 supplemental DEIS, 2006 final EIS, or the 2014 DSEIS and its supporting appendices.

Consequently, for nearly half of the today's travelers, the user costs associated with Preferred Alternative will increase significantly. ADOT&PF estimates that with Alt. 2B, the Katzehin road and shuttle ferry, total user costs will be \$82 to get to Haines and \$101 to get to Skagway. See DSEIS, Table ES-1 at ES-16. Today a ferry ticket from Juneau to Haines costs \$37 and to Skagway it costs \$50 for a walk-on passenger. Under the Katzehin Road scenario an individual traveler will pay roughly \$33 more to travel from Juneau to Haines or Skagway, assuming they have a vehicle at their disposal. At today's taxi rates set by the City and Borough of Juneau of \$3.40 plus \$2.20 per mile, the ride from Juneau to the Katzehin terminal will cost on average \$200 - that's more than four times what it would cost walk-on passengers to reach Haines or Skagway using the existing ferry system.

RESPONSE: The Draft SEIS does describe the user costs for walk-on passengers and does not ignore the use of the ferry as a transit system. The road alternatives (2B and 3) represented a shift in the way transportation would have been provided in the corridor—away from a primarily public transportation mode that operated more like a public transit service, to a highway system where private vehicles provided most of the transportation (publicly-owned shuttle ferries would have provided shorter links connecting the roadways).

DOT&PF and FHWA recognize that this shift would have affected walk-on passengers. Sections 4.3.7.5 and 4.4.7.5 of the Draft SEIS described impacts to “Pedestrians and Bicyclists” for Alternatives 2B and 3, including walk-on passengers. The information included estimates of how many walk-on passengers might have been affected and discussed how they would have been affected, including the anticipated changes in fares. Walk-on passengers are currently able to ride on a subsidized ferry for a long portion of the trip, and under Alternative 2B or 3 they would have needed to drive or take a cab, which would have increased their total out of pocket cost. The actual ferry ticket itself for walking on would have been less than the current system because it would have been a relatively short ride. The \$82 fare quoted in the comment is not the cost for a walk-on passenger; rather, it represents an estimated fare for a family of four in a 19-foot vehicle. To help clarify, additional information about the anticipated fares for the various travel markets (walk-ons, single drivers with a vehicle, etc.) has been added to the Final SEIS.

The primary reason stated for why ADOT&PF and FHWA chose Alternative 2B to be the "preferred alternative" was because it would "generate and accommodate the *greatest* projected traffic demand." DSEIS at p.2-32 (emphasis added). This reasoning is arbitrary for at least two reasons. First, the traffic demand estimates underlying these projections are specious, improper use of models to estimate "some hypothetical larger market," and biased assumptions that prejudice the results for ferry alternatives. See Marshall, *supra* note 2, at 2, 5, and 12.

RESPONSE: The traffic demand model is not “specious” and it did not use “improper” methodology. All traffic demand models attempt to predict future demand based on assumptions and data available in the present. To the extent that they are predicting a future unknown condition, all demand models are “hypothetical.”

---

<sup>8</sup> See McDowell Group (2000), AMHS Marketing and Pricing Study, Volume 1: Summary Report of Key Findings and Recommendations at 65).

The demand model used for this project was developed based on empirical data derived from actual travel conditions observed in Alaska, British Columbia, and Yukon from communities with similar geographic characteristics as Juneau. The model starts by defining a condition that the modelers called “unconstrained demand.” This level of demand predicts how many people would want to travel between Juneau and Haines/Skagway if there were a road the entire distance. This predictive condition was based on the assumption that people in Juneau, Haines, and Skagway would exhibit similar travel patterns given the opportunity to travel by road as other similarly situated communities.

Based on the project team’s research, there are no indicators that travel behavior in Juneau, Skagway, and Haines would differ substantially from that of other Alaskan and Canadian communities if full highway access is available. Based on the data collected, the project team is confident that Juneau residents would travel in a similar manner to other Alaskan residents. Even today, Juneau residents travel only slightly less on a per household basis than the average Alaskan household, even though they do not have full road access. Vehicle ownership per capita in Juneau, Haines, and Skagway is also comparable to other Alaska areas.

The forecast only used the unconstrained demand as an upper bound to bracket the overall demand in the corridor. Each forecast, for each of the alternatives, scales down from the unconstrained demand based on factors of cost, travel time, schedule convenience, etc. Using such factors to predict traveler’s choices and behavior among competing alternatives is a common modeling practice and is used in nearly every traffic model. By factoring the demand down from the unconstrained demand based on costs, travel time, and convenience, the model predicts reasonable estimates of travel behavior based on the relative merits of the alternatives.

Moreover, more than one approach to predicting future travel behavior was used by the project team. These approaches were developed by travel modelers at Fehr & Peers. This firm was specifically identified and hired for its expertise in travel modeling, and its approach and results were peer reviewed by an independent university professor with expertise in travel modeling and travel behavior prior to the results being accepted for use in the Draft SEIS. Two models/approaches were selected as being most representative of likely conditions along Lynn Canal. Each of these models was developed independently and resulted in similar estimates of travel volume along Lynn Canal. The methodology and results of both approaches are fully disclosed in Appendix AA and summarized in the Draft and Final SEIS.

Second, the agencies misinterpret the demand component for this project-it is not to "generate and accommodate the greatest projected traffic demand" but "provide capacity to meet transportation demand in the corridor." DSEIS at 1-10 (emphasis added).

**RESPONSE:** DOT&PF and FHWA are not misinterpreting their own purpose and need statement. Data have demonstrated that there is considerably higher demand for travel than is currently met by the existing transportation system. However, due to high costs, slow travel times, and other inconveniences, the system does a poor job at serving corridor demand. These problems are documented in Chapter 1 of the Draft SEIS.

Each of the reasonable alternatives satisfies the project’s purpose and need to varying degrees in that each provides greater capacity than Alternative 1 – No Action and has been designed to accommodate the demand that would occur given differences in attributes such as cost, travel time, and convenience. There is an underlying latent demand for travel in the corridor (unconstrained demand) and more or less of that demand would be realized with each alternative, depending on the attributes of that alternative. Building a system that satisfies the greatest projected demand in consideration of the costs

is not an arbitrary goal for transportation service providers, and the information provided to make this decision was prepared by specialists in travel forecasting, engineering, and economics.

The agencies' arbitrary reasoning also undermines their argument that Alternative 2B is the "most practicable:" alternative for purposes of justifying the most extensive and permanent loss of aquatic resources from any of the alternatives considered. If the purpose of the project is to accomplish one thing- meet transportation demand - then it is unreasonable to consider an alternative "practicable" if it accomplishes another - increases transportation demand, particularly when such numbers are based on "useless" estimates "relative to some hypothetical larger market." See *Angoon v. Hodel*, 803 F.2d 1016, 1021 (9th Cir. 1986); see also *Smart Mobility on 2014 DSEIS*, supra note 2, at 5 (DOT&PF's unconstrained demand concept is "meaningless").

RESPONSE: DOT&PF and FHWA believe the currently low volume of vehicles transported, the high cost to the State and users, and the low frequency and long travel time of the current ferry service justifies the needs for improvement, and Alternative 2B meets these needs the best. The analysis documenting these needs and the selection of the preferred alternative for the Draft SEIS was not arbitrary. The demand for travel in the corridor already exists. Alternatives that better serve that demand (i.e., satisfy more of it) are superior in meeting the Purpose and Need for the project.

In identifying a preferred alternative for the Draft SEIS, DOT&PF and FHWA weighed the relative merits of the alternatives against the purpose of and needs for the project and the relative impacts to the environment, including impacts to aquatic resources. The documentation of the reasons for identifying Alternative 2B as the preferred alternative in the Draft SEIS are laid out in Section 2.5 of that document.

Moreover, in reference to whether Alternative 2B is "practicable," the Draft 404(b)(1) evaluation provided in Appendix Z (Update to Appendix X) of the Draft SEIS is for the U.S. Army Corps of Engineers evaluation and consideration.

## II. DOT&PF'S PREFERRED ALTERNATIVE IS NOT ECONOMICALLY EFFICIENT OR COST EFFECTIVE.

Soon after statehood, Alaskans faced the formidable challenge of connecting our far-flung coastal communities with the rest of the state and each other. In November of 1960, to provide for our basic transportation needs, Alaskans passed the Ferry and Road Bond Issue No.2, and began development of:

... a fast, modern ferry system operation which will serve as a marine highway to connect the various communities of the State together where it is not practical nor economically feasible to construct highways.

See Alaska Department of Public Works, Study and Report on the Alaska Ferry System at B-1 (Feb. 1961) (emphasis added). The preferred alternative for Juneau Access Improvements is neither practical nor economically feasible.

At the very moment that Alaska is looking for ways to cut the State's operating budget, DOT&PF's dead-end road will cost the State of Alaska \$5 Million more every year than the No Action [ferry] alternative. See DSEIS, Table ES-1 at ES-16; 4-61. Inexplicably, DOT&PF chose to plow ahead and release the DSEIS for this Katzeihin Road Project after it was informed by its own experts:

RESPONSE: In the Draft SEIS, the estimated \$5 million difference between Alternative 2B and Alternative 1 – No Action maintenance and operations costs considers expenses only. Factoring in AMHS revenue generated, Alternative 2B was estimated to be \$2.3 million more expensive than Alternative 1 – No Action. Table ES-1 and Table 4-29 in the Final SEIS have been revised/updated. Alternative 2B is now comparable to the no Action for maintenance and operations estimated annual costs.

None of the "action" alternatives are worth more than they cost, considering all resources (State and federal) required to build and operate the project."

See DSEIS, Appendix FF, User Benefit Analysis at v (April 2014). According to Appendix FF, the cost-benefit analysis "generally followed the methodology set out by the American Association of State Transportation Officials for evaluation of highway transportation." *Id.* at 3. Under that methodology:

When choosing between alternative highway projects the standard is to dismiss projects with benefit-to-cost ratios less than 1.0, because it doesn't make sense to invest in projects when the costs outweigh the benefits. According to ... calculations [in Appendix FF], the proposed Juneau road doesn't even come close, with a benefit- to-cost ratio of 0.28.

See Erickson, Gregg, *CON: Road makes no economic sense*, The Road, Juneau Empire (Nov. 25, 2014); see also DSEIS, Appendix FF, Table A-1 - Utility Values (March 27, 2014). Although the authors of Appendix FF note that "the AASHTO has shortcomings when it comes to evaluate project that involve modes of travel other than roads and highways," they don't specifically identify the benefit-to-cost ratio as one of those shortcomings. Unfortunately, neither do they explain why it makes sense to proceed with the Alternative 2B in the face of this lopsided ratio and ignore this general rule of thumb.

RESPONSE: Benefit cost ratios described in the Draft SEIS are not intended to represent a full measure of all benefits and costs associated with project alternatives. In fact, benefit cost ratios described in Appendix FF of the Draft SEIS are narrowly based on user (traveler) benefits alone and do not consider a wide range of other potential household, commercial, industrial, and community benefits associated with improved Lynn Canal access.

The purpose of the economic efficiency and cost-effectiveness analysis conducted as part of the Draft SEIS was to determine which alternatives serve the largest number of users/travelers at the lowest possible cost. A number of measurements are important in the selection of a preferred alternative. For example, the total number of travelers served and the cost to serve each traveler are important measurements.

That all benefit cost ratios calculated in Appendix FF are less than 1 does not mean investment in better infrastructure is imprudent; it primarily shows that transportation infrastructure costs are very high in Alaska, where populations are generally small, distances long, terrain often challenging, and sea conditions often difficult.

In addition, although the User Benefit Analysis claims "to provide a more comprehensive picture

of the alternatives,"<sup>9</sup> the analysis fails to consider impacts on the Alaska Marine Highway System's (AMHS) capital or operating costs outside northern Lynn Canal or:

external costs including public safety and emergency response-related service costs, pollution and global warming costs, and loss of wildlife or [roadless and] wilderness values . . . or impacts on AMHS capital or operating costs outside northern Lynn Canal . . . For that reason, this analysis does not evaluate the net benefit comprehensively as it states it tries to.

*See* Herrera, *supra* note 3, at 5.

RESPONSE: The quoted sentence states in full “The tables break out the present values of user benefits and project costs to provide a more comprehensive picture of the alternatives.”

Regarding the costs outside of Lynn Canal, the benefit cost ratios described in the Draft SEIS are not intended to represent a full measure of all benefits and costs associated with project alternatives. In fact, benefit cost ratios described in Appendix FF of the Draft SEIS are narrowly based on user (traveler) benefits alone and do not consider a wide range of other potential household, commercial, industrial, and community benefits associated with improved Lynn Canal access. The analysis clearly articulates this in the Executive Summary as well as Scope of Study sections of Appendix FF. The purpose of the economic efficiency and cost-effectiveness analysis conducted as part of the Draft SEIS was to determine which alternatives serve the largest number of users/travelers and the lowest possible cost in support of the purpose and need statement.

#### **A. The Cost Estimate to Construct Alternative 2B is Still Too Low.**

ADOT&PF's latest price tag for the dead-end Katzehin Road Project is \$574 Million, up from the \$258 Million predicted back in 2006. See DSEIS at 2-16. Some of the changes in the project since 2006 include the addition of three snow sheds and two tunnels to mitigate avalanche danger and presumably rock-fall hazards. Bridges have also been lengthened to reduce impacts on salmon, hooligan, and other fish. The effect of these changes has been to increase the total cost, however we submit that even this estimate is not high enough to reflect the true cost of constructing the Katzehin Road Project. The price tag for this project will rise because DOT&PF used a relatively low cost contingency factor for technologically complex changes that have a high risk of cost increases once the supplemental geotechnical analysis needed is completed. *See* Herrera, *supra* note 3, at 3.

RESPONSE: The construction contingency for Alternative 2B is appropriate given the level of design development. The segment from Echo Cove to Sweeny Creek was developed through final design in 2006 after the 2006 Record of Decision, which justifies the 5 percent contingency amount.

A 2006 geotechnical investigation that identified all geologic hazards for Alternative 2B within the segment from Independence Creek to the south bank of the Katzehin River was updated in 2012 in support of the Draft SEIS. Preliminary geotechnical recommendations were developed to address all identified geologic hazards in response to comments and are reflected in the updated cost estimate in Attachment E of the *2017 Update to Appendix D - Technical Alignment Report* in Appendix Z of the Final SEIS. Although additional costs due to geotechnical hazard mitigation have been included in the cost estimate, the final design has not been completed, so a 10 percent contingency is appropriate.

---

<sup>9</sup> DSEIS, Appendix FF at 65.

From the south bank of the Katzeihin River to the proposed Katzeihin Ferry Terminal, the contingency amount of 5 percent is appropriate because this section of roadway is located on relatively flat terrain and the potential for unforeseen circumstances is low. The greatest portion of the cost for this segment is the Katzeihin Bridge. The bridge amounts to over 70 percent of the cost estimate for this segment. Bridge super-structures are well defined, with a low potential for unforeseen conditions that would impact cost. The bridge piling size and length estimates are based upon preliminary geotechnical results in the corridor. In addition, there are substantial historic cost data from throughout the State that were used to estimate bridge construction costs. This further justifies the 5 percent contingency amount.

The original survey data collection for Alternative 2B was completed in 2002. The DOT&PF elected to collect updated survey data for the entire Alternative 2B alignment in 2013 and 2014. Since 2002, there has been substantial improvements to LiDAR sensors and collection/processing techniques that improve the bare earth surface modeling for design. This updated data collection effort further validated the estimated quantities contained within the construction cost estimate for Alternative 2B. For this reason, the contingency amounts for the Final SEIS estimate were left unchanged from the Draft SEIS.

Consider that the length of each of the three bridges will be four times longer than the Douglas Island bridge. In fact, at 2,900, 2,800, and 2,600 feet, the three bridges will be the second, third, and fourth largest bridges in the Alaska if built. *See* Friedman, Sam, *Tanana River Crossing: Alaska's Longest Bridge Opens*, Fairbanks Newsminer.com (posted Aug.6, 2014). Until the agency conducts drilling to determine the actual substrate, the cost estimates for the bridges as well as the Katzeihin ferry terminal will remain highly suspect. The bridges will cross five glacial rivers, which can be particularly challenging because of silty and shifting outwash and the occurrence of Jökulhlaups, or glacial outburst floods and ice flows.<sup>10</sup> The recent washout of the mile 36 bridge along the Copper River Highway is an example of the extreme power and unpredictable nature of glacial river systems.<sup>11</sup> Given the level of uncertainty associated with designing bridges with sufficient clearance to account for isostatic rebound, glacial outbursts, and unknown subsurface conditions at bridge locations, the 8% contingency cost relied on by ADOT&PF for the DSEIS is too low. *See* Herrera, *supra* note 3, at 2-3.

RESPONSE: Contingency costs are addressed in the preceding response. Isostatic rebound and glacial outburst floods result in the raising or lowering of the riverbed. The bridge piles were designed to accommodate long-term scour and other factors associated with isostatic rebound and glacial outburst floods that alter the riverbed elevation.

## **B. Constructing Alternative 2B would Consume a Disproportionate Share of the State's Transportation Funding.**

The \$574 million price tag is in addition to the \$120 million the State is already spending on the Alaska Class Day Boat Shuttle Ferries now being constructed at the Ketchikan shipyard. In sum,

---

<sup>10</sup> Miller, Emily Russo, Jökulhlaup erupts from Glacier, Juneau Empire (July 10, 2014).

<sup>11</sup> *See* Press Release, USDA, Forest Service, Chugach National Forest, *Copper River Highway closed indefinitely at mile 36 due to safety concerns* (released Nov. 22, 2011). An interesting time lapse video of what happened at this bridge crossing can be seen at <https://www.youtube.com/watch?v=7HIVGvv5v8I> (viewed on Nov. 23, 2014).

the investment in new construction for the Lynn Canal corridor will be \$694 million over approximately the next seven years. That is assuming no cost overruns, which as described above, are most probable. The 2014 draft Southeast Alaska Transportation Plan (SATP) notes that the annual new construction budget for the entire Southeast region is \$61 million per year for a total of \$366 million in new construction the next 6 years.<sup>12</sup> Somehow, the State is planning to spend nearly twice what is budgeted for the entire Southeast Alaska region on the Lynn Canal road alone. Will the additional money come from repairs and refurbishments needed across the region? Will it be taken from other regions of the State?

RESPONSE: Prioritizing the use of National Highway System (NHS) transportation funds is the responsibility of the DOT&PF. DOT&PF is continually reconsidering where to spend available transportation funds. That prioritization is done through the Statewide Transportation Improvement Program (STIP), which is published in draft form for public review and comment before approval. The STIP is frequently modified each year to account for first, project schedule changes and second, shifting priorities around the State. The STIP is approved by the DOT&PF Commissioner, FHWA, and Federal Transit Administration (FTA).

The Legislature provides DOT&PF with authority to spend money on a project by project basis, and allocates funding for the State's match through the capital budget. This process is responsive to funding availability; on-going assessment of the condition of roads, bridges, ferries, and terminals; assessment of traffic and needs; and shifting federal and State legislation.

Will the road stop short of the proposed ferry terminal?

RESPONSE: Alternative 2B would have been constructed from the terminus of the existing road to the Katzehin Ferry Terminal. There would have been multiple construction projects comprising the overall project development. There would have been no intent to end the road short of the proposed ferry terminal.

*1. If segmented, this project would lose its eligibility for Federal funds.*

It is common practice to divide up mega-projects, like the proposed Katzehin Road Project, into segments. Unlike other road improvements that may leave a portion of the road in poor, but still passable condition, people will be unable to travel the East Lynn Canal corridor between Juneau and Haines or Skagway until the entire route is built. We are concerned that if the State only has enough funding to construct the first phase of the project through Berners Bay to the Kensington Mine, the State of Alaska will not be eligible for reimbursement from the Federal Highway Administration. Funding from the National Highway Performance Program (NHPP) is designated for transportation projects that are part of the National Highway System. A road ending at a mine, which provides no way for people to travel between communities, can in no way be interpreted as part of the National Highway System. In this scenario, the NHS route designation and funding that accompanies that title would remain with the Lynn Canal's community-to-community ferry route.

RESPONSE: The suggestion that FHWA or DOT&PF intended to build a road to Kensington Mine is unfounded and not supported by any information in the Draft or Final SEIS. Section 2.5 of the Draft SEIS described funding considerations and the plan to fund construction of Alternative 2B in its

---

<sup>12</sup> See ADOT&PF, 2014 Draft SATP at 14.

entirety. Were Alternative 2B to proceed, DOT&PF would have developed a financial plan detailing the funding, after FHWA issued a Record of Decision, and FHWA would have approved the plan prior to authorizing construction funding. Because Alternative 1 – No Action is now identified as the preferred alternative, no financial plan would be prepared.

The same reasoning precludes the use of Shakwak funds on a segmented road project because this funding source is also designed to connect Southeast Alaska with the Yukon Territory and the rest of Alaska. If this occurred, the State of Alaska would be on the hook to pay back federal dollars spent to build a road to the Kensington Mine.

RESPONSE: Section 2.5 of the Draft SEIS described funding considerations and the plan to fund construction of Alternative 2B. The Draft SEIS did not identify Shakwak funds as a potential source of funding for the project. Because Alternative 1 – No Action is now identified as the preferred alternative, no financial plan would be prepared.

We saw the Federal Highway Administration threaten to demand that State of Alaska pay back funding for two unused ferry terminals earlier this year. *See* Forgey, Pat, *New ferry 'pit stops' in Southeast Alaska aimed at satisfying feds*, Alaska Dispatch News ( Sept. 14, 2014). The Federal Transit Authority has made a similar request to the Mat-Su Borough to return federal funds expended on the Knik Arm Ferry, which was never used for its intended purpose. *See* Brehmer, Elwood, *Feds ask Mat-Su for ferry grants back*, Alaska Journal of Commerce (Aug. 7, 2014).

## *2. If selected, Alternative 2B may be ineligible for NHPP funds.*

We also question Alt. 2B's eligibility for reimbursement through the NHPP even if the project does provide a complete connection between Juneau and the northern Lynn Canal communities. Congress designed the NHPP to "ensure that investments of Federal-aid funds in highway construction are directed to support progress toward the achievement of performance targets established in a State's asset management plan for the NHS."<sup>13</sup> The State's Long Range Transportation Plan stakeholders group recently began setting these goals. Specifically, the goal for new infrastructure is to "develop new capacity and connections based on the return on investment in improving accessibility, connectivity, safety, efficiency and reliability of the Alaska Transportation System."<sup>14</sup> ADOT&PF's preferred alternative fails to meet any of these goals.

RESPONSE: DOT&PF plans to submit an asset management plan to FHWA 2018.

DOT&PF and FHWA disagree with the suggestion that the project is not consistent with the goals of the State's Long Range Transportation Plan. The Southeast Alaska Transportation Plan is an element of the Statewide Plan and includes the Juneau Access Improvements Project. The goal language cited by the commenter is still "preliminary" and has not been adopted. Nonetheless, it is consistent with the purpose and need for the project.

Like the goal language, the alternatives under consideration do seek to develop new capacity to meet demand. Similarly, consideration of State costs and return on investment are defined in Chapter 2 of

---

<sup>13</sup> ADOT&PF, 2013-2015 Statewide Transportation Improvement Program with Amendment 11 at Need ID: 19214 (Sept. 16, 2014).

<sup>14</sup> ADOT&PF, Preliminary Policies, Strategies, and Actions, Long Range Transportation Plan at 2 (Oct. 2014)

the Draft SEIS. In the Draft SEIS, Alternative 2B was found to best satisfy the overall corridor demand at the lowest cost per trip.

Efficiency is an important consideration and need for the project. As documented in Chapter 2 of the Draft SEIS, the current system is not efficient, and is characterized by long travel times and high user costs. Alternative 2B performs best in terms of efficiency, making the most improvement over current travel times and trip costs.

### 3. *Alternative 2B is not eligible for Federal transit funds*

The Alaska Marine Highway serves a wide array of purposes and a variety of travelers, which open the system to a wider array of Federal funding options. For example, mainline ferries which connect with the continental road system are considered part of the National Highway System and are thus eligible for NHPP funds. Because of the important role the ferry system plays in connecting the continental U.S., British Columbia, Southeast Alaska, and South Central Alaska, the AMHS is also eligible for what is called "Shakwak" funds. Because Marine Highway vessels also carry people from community to community without the need of a vehicle, the AMHS is also eligible for Federal transit funding.

We submit that the Lynn Canal portion of the AMHS will no longer be eligible for Federal Transit funds because ADOT&PF's Preferred Alternative 2B removes the mass transit function of the Marine Highway System, forcing 45% of travelers who would otherwise "walk-on" to the ferry system<sup>15</sup> to drive a vehicle or take a taxi.

RESPONSE: Section 2.5 of the Draft SEIS described funding considerations and the plan to fund construction of Alternative 2B. DOT&PF did not identify Federal Transit or Shakwak funds as a potential source of funding for the project.

The FTA Section 5309 New Starts program was an annual allocation to the State of Alaska for the AMHS under the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) and was discontinued under the Moving Ahead for Progress in the 21st Century Act (MAP-21).

Under MAP-21, and continuing under the Fixing America's Surface Transportation (FAST) Act, FTA made available Section 5307 Urbanized Area Formula Grant program funds in support of the Discretionary (competitive selection) Passenger Ferry Grant program. The AMHS does not qualify for urbanized area funds.

AMHS is potentially eligible for 5311 Rural Transit Formula funds for non-urbanized areas. This is a small program, approximately \$8 million annually, and AMHS's participation in this program would generate minimal funding for the AMHS program and divert federal funds away from rural community transit systems that depend on these funds for continued operation. As such, AMHS has not competed for 5311 funding due to the limited amount of funds available to the State of Alaska.

There will be no "walk-on" travelers aboard the Katzeihin shuttle ferry with the exception of the occasional hunter, angler, or adventurer setting out from Haines. The Katzeihin River, part of the largest Inventoried Roadless Area on the Tongass National Forest, is currently managed to provide generally unmodified natural appearing settings environments; the 1997 Tongass Plan

---

<sup>15</sup> McDowell Group (2000), *supra* note 8.

recommended the upper 10 miles of this river for Wild designation under the federal Wild and Scenic Rivers Act. Even if the land were zoned for development, the sheer 6,000 foot mountain cliffs that make the road so difficult to construct would quickly curtail any dreams of development. ADOT&PF is not planning for anyone to drive their car 90 miles from Juneau only to leave it at the Katzehin ferry terminal; the layout of the parking area is barely large enough to stage the traffic ADOT&PF predicts. In short, proceeding with Alternative 2B is akin to tearing up a light rail and replacing it with asphalt.

RESPONSE: DOT&PF and FHWA do not anticipate walk-on passengers would use the new ferry like they currently use the system because of the driving distance under Alternatives 2B and 3. The fare structure would have been such that it would have been approximately the same or less costly to take a car across Lynn Canal at Katzehin on the shuttle ferry than it would have been to walk on as a ferry passenger under the No Action Alternative. There would not have been the same kind of financial incentive to leave one's car at the terminal and the terminal would have been remote and unmanned, meaning vandalism would have been a possibility. Therefore, overnight and multi-day parking is not part of the design for the new shuttle ferry terminals.

The road alternatives (2B and 3) represent a shift in the way transportation would have been provided in the corridor—away from a primarily public transportation mode that operates more like a public transit service, to a highway system where private vehicles provide most of the transportation (publicly-owned shuttle ferries would provide shorter links connecting the roadways). The Draft SEIS described the consequences of such changes to walk-on passengers in Sections 4.3.7.5 and 4.4.7.5 under the headings, “Pedestrians and Bicyclists.” The information included estimates of how many walk-on passengers might have been affected and how they would have been affected. Additional information regarding walk-on passengers has been added to these sections in the Final SEIS.

### III. DSEIS FAILS TO REASONABLY DEMONSTRATE THAT THE PROPOSED "KATZEHIN ROAD PROJECT" IS SAFE.

Both federal and state law make safety a top priority. The agencies' selection of a substandard road along the deepest and steepest fiord-like inlet in the North America<sup>16</sup> and under 43 avalanche chutes and over 100 geologic hazards is completely inconsistent with achieving the national highway system's top priority.

Federal law requires an EIS prepared for a federal highway project to be sufficiently detailed for the FHWA to ensure that the project is safe. *See* 23 U.S.C. 109. Under Alaska law, when ADOT&PF designs new highways, they "must be conducive to safety, durability, and economy of maintenance ...." *See* AS 19.10.160(b). The DSEIS fails to provide a reasonable basis for meeting either standard.

RESPONSE: Alaska Statute (AS) 19.10.160(b), applies to “major upgrade and new construction projects for highways in **federally recognized metropolitan planning areas**” [emphasis added]. The only two metropolitan planning areas in Alaska are Anchorage and Fairbanks; therefore, the citation does not apply to this project. Nonetheless, all roads constructed under State and federal authority must follow State and federal design procedures that have been adopted/established to support safe travel.

#### **A. The Secretary of Transportation Should Reject the DSEIS Because It Fails to Reasonably Assess Safety Issues.**

---

<sup>16</sup> *See* DSEIS at 3-40

The EIS must be sufficiently detailed for the Secretary to ensure that the project is safe. The Secretary must reject the EIS if these issues aren't fully assessed. *See* 23 U.S.C. 109. The Secretary must ascertain the safety of the project before approving it.<sup>17</sup> Given the predicted risks associated with avalanches, landslides, and glacial outburst floods (Jökulhlaup), exacerbated the impracticality of stabilizing all potential rockslide areas, Alternative 2B is far more dangerous than a road of similar dimensions and traffic volume built in a far more forgiving landscape.

*See* DSEIS at 3-36 to 38, 4-67; 2013 Update to Appendix J, Snow Avalanche Report (hereinafter "Snow Avalanche Report").

In addition, the Secretary of Transportation shall consider the needs for effectiveness and safety in transportation systems, including recognition and preservation of "the inherent advantage of each mode of transportation" and promoting "safe, adequate, economical, and efficient transportation." *See* 49 USC 302 (c)(1); 49 USC 13101 (a)(1)(A), (B). Given the nearly perfect safety record for the Alaska Marine Highway System, and the unreasonable risks presented by the proposed substandard road, approval of DOT's preferred alternative would be arbitrary.

RESPONSE: All roads constructed under State and federal authority must follow State and federal design procedures that have been adopted/established to support safe travel. FHWA may grant an exception to a specific design criterion on a case-by-case basis with justification. FHWA requires any alternative selected for construction to fulfill the standards identified in 23 United States Code (USC) § 109. DOT&PF and FHWA have disclosed the anticipated implications to safety of travel in Lynn Canal under each of the alternatives, including No Action, in the SEIS. While it is true that highway travel tends to have more crashes, there is no reason to believe that accident frequency under Alternative 2B or 3 would have been statistically different than on similar highways in Alaska.

If FHWA were to select a build alternative, it would not be arbitrary. FHWA's Record of Decisions are based on review of technical data developed in support of a Final SEIS and each alternative's ability to meet the Purpose and Need for the project. FHWA also takes into consideration all comments received in the development of a Final SEIS.

### **B. The DSEIS does not Disclose Enough Information to Fully Evaluate the Avalanche Hazards Posed by the Preferred Alternative.**

As noted at the beginning of Appendix 2 to the Snow Avalanche Report, "[t]he results of the analysis are only as reliable as the data used." It is difficult to determine how reasonable the calculated mitigated Avalanche Hazard Index (AHI) is because important factors are not disclosed, including the criteria used for estimating avalanche frequency and the correction factor applied because of changing weather patterns associated with climate trends in the region. *Id.* at 198-99. Without understanding the precise factors plugged into the formulas, this numerical expression of hazard risk remains "dimensionless" and the public has no way of

---

<sup>17</sup> *See D.C. Federation of Civic Associations v. Volpe*, 459 F.2d 1231, D.C. Cir 1972) (upholding District Court's finding that planning had not "proceeded to a sufficient degree for the responsible officials to determine that the planned facility is structurally feasible" and finding that "§ 109(a) requires not only that the bridge be safe, but also—and no less important—that its safety be ascertained before the Secretary approves the project. That requirement minimizes the safety hazards and at the same time insures that public funds will not be squandered on a demonstrably unsafe proposal").

evaluating the results.

RESPONSE: All the factors, raw data, and mitigation calculation spreadsheets used to calculate the mitigated AHI (risk reduction) are available in pdf format online at [www.juneauaccess.alaska.gov](http://www.juneauaccess.alaska.gov) ([http://dot.alaska.gov/sereg/projects/juneau\\_access/documents.shtml](http://dot.alaska.gov/sereg/projects/juneau_access/documents.shtml)).

The discussion in the *2014 Update to Appendix J - Snow Avalanche Report*, at Section 6.1, Mitigated AHI Target Calculations, provided analysis of how well the goals were achieved, rather than the calculation of the risk reduction. The risk reduction factors for each path and for the overall avalanche program are listed in Section 6.3, Lynn Canal Avalanche Hazard Reduction Methods.

The level of specificity of the *2014 Update to Appendix J - Snow Avalanche Report*, is more than adequate for an EIS-level evaluation. The experience of the authors and peer reviewers has been updated with resumes in Appendix J in Appendix Z of the Final SEIS.

In response to our specific request on October 30th for information on how these calculations were made, ADOT&PF responded on November 20<sup>th</sup> with a copy of the "AHI Data Sheets" and a 1989 study on methodology for AHI calculations. While we appreciate ADOT&PF providing us with this information, the agency's response is not in compliance with AS 44.62.213(b) which requires the agency to respond to such requests within 10 days and, if it answers the question, to make sure the question and answer are made available to the public. Other than the email to SEACC, we are unaware of any steps taken by ADOT&PF to inform the public that this important information was available as required.

RESPONSE: The statute cited is incorrectly applied. Article 4 of the Alaska Administrative Procedure Act (AS 44.62.180-290) provides the procedures for the adoption of regulations by a State agency. The statutory provisions referenced in the comment, AS 44.62.213(b), is only applicable when a State agency is adopting, amending, or repealing a regulation. The statutory provision and its requirements are not part of the Alaska Public Records Act and are not applicable to requests for public records referenced in the comment. DOT&PF's response to the records request referenced in the comment was done in accordance with the Alaska Public Records Act.

The geotechnical and design uncertainties associated with avalanche mitigation structures like snowsheds and bridges, exacerbates the difficulties faced by the public and agency decision-makers to understand the precise basis for dropping the avalanche hazard index from 300 to 28. See Herrera, *supra* note 3, at 4. Given the errors discovered in the DSEIS regarding loss of life from traffic accidents under the Preferred Alternative,<sup>18</sup> we respectfully request the agencies "show us the numbers."

RESPONSE: All the factors, raw data, and mitigation calculation spreadsheets used to calculate the mitigated AHI (risk reduction) are available in pdf format online at [www.juneauaccess.alaska.gov](http://www.juneauaccess.alaska.gov) ([http://dot.alaska.gov/sereg/projects/juneau\\_access/documents.shtml](http://dot.alaska.gov/sereg/projects/juneau_access/documents.shtml)).

The discussion in the *2014 Update to Appendix J - Snow Avalanche Report*, at Section 6.1 Mitigated AHI Target Calculations, is an analysis of how well the goals were achieved, rather than the calculation of the

---

<sup>18</sup> Furbish, Elaine, *Letter to Editor The Road is deadlier than forecast*, Juneau Empire (Nov. 3, 2014)((the projection of 5 deaths due to traffic accidents under over 30 years in the DSEIS for the Preferred Alternative is incorrect-the correct calculation is three times higher).

risk reduction. The risk reduction factors for each path and for the overall avalanche program are listed in Section 6.3, Lynn Canal Avalanche Hazard Reduction Methods.

The level of specificity of the *2014 Update to Appendix J - Snow Avalanche Report*, is more than adequate for an EIS-level evaluation. The experience of the authors and peer reviewers has been updated with resumes in Appendix J in Appendix Z of the Final SEIS.

The risk reduction factors are consistent with those routinely achieved by modern avalanche programs worldwide. The program proposed for Lynn Canal follows current best practices, with multiple full-time forecasters for daily field presence.

There are no “geotechnical and design uncertainties” associated with snowsheds or their mitigation capabilities; they are in common use around the world, and their effectiveness is well-proven. All other mitigation factors applied are consistent with best engineering practices worldwide.

Please refer to the *2014 Update to Appendix J - Snow Avalanche Report*, Section 3.1, Figure 2, for methods used on various highways worldwide, and to the remainder of Section 3, and to Section 6, Avalanche Mitigation, where the reduction factors are discussed specifically and in detail, especially Figure 4a, where mitigation factors achieved in other locations are listed.

*1. The DSEIS fails to fully account for the societal costs of avalanches.*

In standard practice the Avalanche Hazard Index calculation includes the probability that vehicles, equipment, infrastructure, and people will be struck while either moving or waiting. By assigning values to these categories ADOT&PF could estimate not just the number of people who while likely die as the result of avalanche related fatalities, or the number of vehicles likely to be tossed to the bottom of Lynn Canal, but also how much those losses will cost the State of Alaska.

The structurally mitigated AHI for Alt. 2B is a relatively low 27.7. See Figure 10, Snow Avalanche Report at 29. It is unclear how the risk to operators who are working to mitigate or clear slides is accounted for. See Glassett & Techel (2014).<sup>19</sup> With a higher AHI, which may very well be appropriate given the variables explained below, the Preferred Alternative becomes even more dangerous. In addition to adjusting the AHI, the number of expected avalanche fatalities of both drivers and operators should be added to the anticipated fatalities reported in the DSEIS.

RESPONSE: While it is possible to calculate societal cost values for economic losses, injury, and death as suggested, these numbers would be of questionable accuracy. There is an international group working on the problem of assigning risk of death, but there is no accepted, accurate method for calculating probability of avalanche death on transportation corridors or the number of vehicles impacted.

The encounter probability term, as calculated for the AHI, is an oversimplified calculation. Using it as a basis for calculation of potential deaths does not result in numbers that agree with actual highway avalanche death records, as noted in Hendrikx and Owens (Hendrikx, J. and Owens, I. 2008. *Modified*

---

<sup>19</sup> Glassett, Timothy and Frank Techel. *Avalanche accidents involving people along transportation corridors and the implications/or avalanche operations*, Proceedings, Internal Snow Science Workshop, Banff, 2014, available at [http://arc.lib.montana.edu/snow-science/objects/ISSW14\\_paper\\_014.02.pdf](http://arc.lib.montana.edu/snow-science/objects/ISSW14_paper_014.02.pdf)

*Avalanche Risk Equations to Account for Waiting Traffic on Avalanche-Prone Roads*, in *Cold regions Science and Technology* 51, February 2008, pages 214-218). It quotes Peter Scherer, the originator of the AHI method: “Furthermore, while the individual and collective risk enumerated in deaths year<sup>-1</sup> may still seem high, Schaerer (1989) noted that the theoretical frequency of encounters has been found to be far greater than the observed number, providing the example of Rogers Pass, where the expected encounter frequency was calculated at 0.3 vehicles year<sup>-1</sup> for a 25 year period, but no encounters actually occurred during this period.”

The one method of assessing risk on transportation corridors that has a historical record of being a useful working basis for comparison of one route to another is the AHI, without the addition of socioeconomic factors. It is the most widely used and most accepted method, and thus has the greatest comparative value of all methods.

The *2014 Update to Appendix J - Snow Avalanche Report*, 6.2.1 Risk Management Analysis of Three Very High AHI Highways, provides a detailed comparison of death rates on highways with similar AHIs. It also, accounts for the deaths in Alaska for both traveling public and highway workers due to avalanches and highway with high AHI.

The 2014 Draft SEIS addresses avalanche hazards associated with Alternatives 2B and 3 in Sections 4.3.8.2 and 4.4.8.1, respectively, and addresses how to mitigate these risks through forecasting, road closures, use of explosives, bridges, snow sheds, etc. While avalanche risk and hazards are addressed in the Draft SEIS, the text has been augmented in the Final SEIS to clarify that avalanche hazard includes the risks of property damage, injury, and death.

The *2014 Update to Appendix J - Snow Avalanche Report*, Section 6.4, Operational Avalanche Risk Management Program, outlines the considerations for developing worker risk reduction programs for construction and operations. Section 12.4 Appendix 4: Highway Closures, Section 13 Appendix 5: Transportation Avalanche Danger Scale, and Section 13.1 Appendix 6: Highway Closure and Operation Criteria, outline the need for operational worker risk reduction programs and contain examples of the material in such operational plans. Appendix 6 states that "These guidelines are a sample of the kind of material that is part of a project-specific operational avalanche plan and are not a substitute for such a detailed plan. A project-specific plan is required under Alaska case law for worker safety before construction or operation of an avalanche-exposed facility may proceed." Should a build alternative be chosen as the preferred alternative, a project-specific operational avalanche plan would be developed during final design.

Section 6.2, AHI Values and Risk to Travelers and Workers, compares public and worker deaths on high-AHI highways and notes that “The higher risk to highway workers underscores the need for strict adherence to the avalanche program and risk management protocols presented in this study, particularly when reopening the highway after avalanches have occurred.” While development of an operations plan is required during final design phase, key concerns and typical risk mitigation measures detailed in Section 6.4, Operational Avalanche Risk Management Program, include forecasting, closures, allowing debris removal only with the approval of the avalanche forecaster, and specific provisions for clearing debris. Sample protocols with specifics for risk reduction at various avalanche danger levels are provided in Appendix 6: Highway Closure and Operation Criteria.

Risk management for maintenance crews is part of an operations plan, which is not done until the design and pre-operations stage, but the program outlined in Section 6.4.6, Highway Operations Procedures, states that “No avalanche debris should be cleared without approval from the on-duty avalanche specialist. The specialist should consider visibility, presence of residual snow in avalanche starting zones, terrain hazards,

availability of spotters and equipment and other risk factors. No avalanche debris should be cleared when visibility is poor due to darkness or conditions such as fog.”

Annual maintenance and operation costs for Alt. 2B are estimated at \$2.8 million annually with \$1.6 million of that dedicated to the avalanche control program. *See* DSEIS at 2-16; Table 4-27 at 4-67. We submit that it will be much higher, particularly when the annual loss factor is taken into account.

RESPONSE: The maintenance would have been funded by State general funds and administered by DOT&PF Southcoast Region. The funding is subject to the Alaska Legislature, who annually identifies, allocates, and authorizes these funds.

The maintenance cost for the highway under Alternative 2B was estimated using actual costs incurred by DOT&PF for highway maintenance. Additional personnel, equipment, and materials were included in the estimate to provide for responses to avalanches. Because of the addition of extra resources to address conditions expected on the Juneau Access highway, the estimate shows the cost per mile to maintain the highway to be approximately 190 percent higher than DOT&PF's current average maintenance cost per mile in Southeast Alaska.

*2. The operational avalanche risk management program should be reviewed by experienced operators*

Although the reputable authors of the Snow Avalanche Report possess experience in avalanche forecasting and engineering, they do not have direct experience operating an avalanche control program. It is also not apparent whether the engineers who provided the peer review of the Snow Avalanche Report have such experience. Given the extremely complex nature of this type of operation, it is prudent to have at least one author who has real-life experience with avalanche control programs. You would not consent to heart surgery by a doctor who had only read about it in a textbook, nor should the State rely on an avalanche mitigation program designed by people without direct experience in the field. At the minimum, the avalanche mitigation and control program should be independently audited or peer reviewed by any number of experts in Alaska (including ADOT&PF employees) who run actual mitigation programs along highways and railways.

RESPONSE: The *2014 Update to Appendix J - Snow Avalanche Report* was peer reviewed. Please refer to Appendix J, Section 13.11, Appendix 16: Peer Review for details.

Resumes for those who worked on and reviewed the study have been added to the *2017 Update to Appendix J - Snow Avalanche Report*, Section 13.12, Appendix 17: Resumes. These resumes demonstrate that the authors and peer reviewers have extensive experience with avalanche control programs, including in Alaska. One reviewer, Doug Fesler, is based in Alaska and has over 30 years of avalanche forecasting and hazard management experience in Alaska.

*3. Southeast ADOT&PF's current forecasting and mitigation strategies are woefully inadequate.*

A 1990 study prepared for ADOT&PF, evaluated the avalanche program run by the Southeast region of DOT on Thane Road just south of downtown Juneau. The authors found that "the

existing program does not reflect the state-of-the-art in avalanche forecasting/control procedures."<sup>20</sup> Specifically the report found that ADOT&PF lacked in-house professional avalanche forecasting/hazard evaluation capability. The authors also questioned the soundness of relying on the National Weather Service to provide hazard warnings because meteorologists have little or no avalanche training, conduct no field evaluations, and have no network of avalanche observers. The authors found that ADOT&PF avalanche control was often poorly timed, virtually no records were kept, training was incomplete and inconsistent, and the timing of explosive control was not optimal. Twenty-four years later a Site Visit and Review by an Avalanche Specialist found that nothing has significantly changed in the department's practices. *See* Murphy, Matt *Site Visit and Review, ADOT&PF Avalanche Forecasting and Control on Thane Road Juneau, Alaska* at 7 (Mar. 2014).

It is also instructive to compare how many forecasters ADOT&PF proposes for the Katzeihin Road Project with the State of Utah on the dangerous, less than the 14-mile Little Cottonwood Canyon Road, which is threatened by 35 major avalanche paths. The State of Utah employs a seasonal staff of four full-time avalanche forecasters stationed in the canyon. *See* Fehr & Peers, Report No. UT-09.01 at I (Feb. 2009). According to the Snow Avalanche Report (at 34), the core staff anticipated for an avalanche program that will cover 43 avalanche chutes and over 100 geologic hazards along a 48 mile road will be one full time avalanche specialist, one half-time avalanche specialist and one part-time intern. Clearly the State of Alaska needs to do much more to avoid liability for implementing a policy decision to select the Preferred Alternative in a negligent manner.

RESPONSE: DOT&PF is well aware of the deficiencies in past avalanche programs, and added their first avalanche program staffer for the region in the 2014-15 season as part of an ongoing effort to upgrade avalanche operations.

Staffing for the program includes two full-time avalanche specialists plus one seasonal avalanche specialist, or three people, during avalanche season. Staffing at this level is comparable to other transportation and industrial avalanche programs, with two people on duty daily, and the capability to operate 24/7 in shifts when conditions dictate. Please refer to *2017 Update to Appendix J - Snow Avalanche Report*, Section 13.6, Appendix 11, Operating Budget Spreadsheets, for updated details on staffing.

#### *4. Proposed avalanche mitigation options are unrealistic.*

Under Alaska law, ADOT&PF has a duty to "develop and implement an avalanche control plan to protect persons who use public highways." AS 19.05.030(7). We could not find any regulations or agency policy implementing this duty. Instead, DOT&PF apparently tries shovels responsibility for managing avalanche risks on to the general public. *See* ADOT&PF Kicks off Alaska's Avalanche Awareness Month (Nov. 10, 2014). Despite recognizing that Alaska law requires development of project-specific operational avalanche plan, the Snow Avalanche Report does not provide one because "[p]lanning at that level is beyond the scope of this report." Snow Avalanche Report at 211. Because ADOT&PF chose not to develop and disclose such a plan for the Preferred Alternative in this DSEIS, or establish any regulatory standards for doing so, we question what basis the FHWA can reasonably rely upon to conclude that the Preferred

---

<sup>20</sup> *See* Fesler, D., et al., 1990. Avalanche Hazard Analysis & Mitigation Recommendations for Thane Road Juneau, Alaska Phase I. Prepared for ADOT&PF Project No. 70134/FM-0963)(cited in Snow Avalanche Report at 255).

Alternative is safe.

RESPONSE: The *2014 Update to Appendix J - Snow Avalanche Report*, Section 6.4 Operational Avalanche Risk Management Program, outlines the considerations for developing risk reduction programs for construction and operations. Section 12.4 Appendix 4: Highway Closures, Section 13 Appendix 5: Transportation Avalanche Danger Scale, and Section 13.1 Appendix 6: Highway Closure and Operation Criteria outline the need for operational risk reduction programs and contain examples of the material in such operational plans. Section 13.1 Appendix 6 states that “These guidelines are a sample of the kind of material that is part of a project-specific operational avalanche plan and are not a substitute for such a detailed plan. A project-specific plan is required under Alaska case law for worker safety before construction or operation of an avalanche-exposed facility may proceed. Planning at that level is beyond the scope of this report.” DOT&PF and FHWA believe that the analysis presented is sufficient for decision making.

As stated in Section 6.4.6 of the *2014 Update to Appendix J - Snow Avalanche Report*, “Avalanche season highway operations should be conducted following a project-specific, fully detailed avalanche risk management plan, as required under Alaska case law on worker safety. Crews should be trained in avalanche procedures and equipped with avalanche emergency kits.”

According to the 2013 Update to Appendix J, mitigation options include adjusting Alternative 2B and 3 routes to reduce avalanche hazard and application of some unspecified "industry standard program of risk management using a combination of forecasting, explosives, and preventative highway closures." 2013 Update to Appendix J at 7-8.

Using helicopters to service the blaster boxes and directly bomb 25 different chutes with an untold number of start paths is an unreliable strategy. First, avalanche danger is often highest when it is most difficult to mitigate the danger. Snow builds up during stormy weather precisely when low ceilings and high winds can make it difficult to fly helicopters. Second, avalanche mitigation efforts that rely on using howitzers to trigger avalanches have a success rate of just over 50 percent. "This means just more than half of significant avalanches-those with a snow depth of 10 feet or more-are triggered and few then half occur naturally." See Coffey, M. and Hess, E., *The Valdez "Damalanche"*, "APWA Reporter at 44 (Nov. 2014). Pre-emptively closing the road when the danger is high but cannot be mitigated is not a realistic strategy as the State of Alaska never pre-emptively closed a road to date.

RESPONSE: The details of the operational avalanche program are unspecified because detailed operational programs are developed at the design, pre-construction, and pre-operations stages; not at the EIS stage. The 2014 and 2017 *Update to Appendix J, Snow Avalanche Report*, Section 6.4 Operational Avalanche Risk Management Program, outline the considerations for developing risk reduction programs for construction and operations. Sections 12.4 Appendix 4: Highway Closures; 13 Appendix 5: Transportation Avalanche Danger Scale; and 13.1 Appendix 6: Highway Closure and Operation Criteria outline the need for operational risk reduction programs and contain examples of the material in such operational plans. Section 13.1 Appendix 6 states that “These guidelines are a sample of the kind of material that is part of a project-specific operational avalanche plan and are not a substitute for such a detailed plan. A project-specific plan is required under Alaska case law for worker safety before construction or operation of an avalanche-exposed facility may proceed. Planning at that level is beyond the scope of this report.”

The reason remote exploders are proposed is to reduce reliance on helicopters flying in bad weather and during the night. Remote exploders can be loaded and serviced between storms.

Effectiveness of all avalanche mitigation programs is calculated based on the proven and documented records of other highway avalanche programs. No explosive works on deep instability. A program that involves waiting until ten feet (3.0 m) of snow accumulates before blasting would not be effective; blasting must be frequent if it is to be effective.

Pre-emptive avalanche closures have been used on Alaska highways, for instance in Skagway in the winter of 2015-2016. In Lynn Canal, DOT&PF would have the ability to use the shuttle ferries during closures, encouraging the use of preventive closures of a Lynn Canal highway.

It is also not clear how the AHI accounts for risks associated with paths that have multiple starting zones. For example, the Eldred Rock path appears to have 15 or 16 different starting zones making it an extremely dangerous path. *See* Snow Avalanche Report at 65. If ADOT&PF succeeds in mitigating the danger at one of the starting zones, there are still over a dozen more that could trigger a slide. If a slide does occur and a crew is sent out to clear it, they could be exposed to risk for a prolonged period of time. Clearly this is a far more dangerous and problematic path than a path with a single start zone.

**RESPONSE:** All paths with multiple starting zones or in groups where they are close to other paths were assigned increased probabilities of secondary avalanches. Please refer to the *2017 Update to Appendix J - Snow Avalanche Report*, Section 12 Appendix 1: Avalanche Hazard Index (AHI) Calculation for details of the AHI calculation.

For further details, please refer to the raw data and calculation spreadsheets available online in pdf format at [www.juneauaccess.alaska.gov](http://www.juneauaccess.alaska.gov) ([http://dot.alaska.gov/sereg/projects/juneau\\_access/documents.shtml](http://dot.alaska.gov/sereg/projects/juneau_access/documents.shtml)).

The standard practice for avalanche mitigation work is that all multiple starting zones are dealt with before anyone is allowed into their runout zones; therefore, multiple starting zones do not represent an increased risk to workers or the traveling public. Risk management for maintenance crews is part of an operations plan, which is not done until the design and pre-operations stage, but the program outlined in Section 6.4.6 Highway Operations Procedures nonetheless states that “No avalanche debris should be cleared without approval from the on-duty avalanche specialist. The specialist should consider visibility, presence of residual snow in avalanche starting zones, terrain hazards, availability of spotters and equipment and other risk factors. No avalanche debris should be cleared when visibility is poor due to darkness or conditions such as fog.”

It is hard to evaluate the efficacy of the snow sheds proposed for the Yeldagalga Creek paths (ELC019, 020, and 021). All we can determine for certain is the length of the sheds are 1500 feet. *See* 2014 Update to Appendix D at 24 and Table 3-1 at 25 (hereinafter "Technical Alignment Report"). If a tunnel is over 800 feet long, the FHWA requires including ventilation and fire protection systems into the design.

**RESPONSE:** Snowshed effectiveness is well documented from the design and implementation of snowsheds around the world. Through proper design, snowsheds have proven effective and provide protection for all of the width of the path that they cover. Specifics of detailed design are not typically available at the EIS stage; rather, they would be determined further in the design stage.

The requirements for ventilation have been accounted for in the design (snowsheds are open on the

downhill side, which provides ventilation) . The *2017 Update to Appendix D - Technical Alignment Report*, lists three proposed snowsheds ranging in length from 300 to 800 feet.

This is true for both avalanche sheds and the two traditional tunnels that are planned for the route. It is important to note that Washington DOT is currently dismantling a snow shed along I-90 and replacing it with a bridge. Constructing new tunnels were rejected "due to the tunnels causing greater engineering risks, maintenance cost, operational difficulties, and environmental consequences."<sup>21</sup> A recent study from Italy concluded that "severe accident rates in tunnels are higher than those of the corresponding motorways in about two-thirds of the tunnels studied, and lower in the remaining one-third. These results appear to be affected, apart from driver behavior and poor visibility in tunnels, also by the geometric and traffic characteristics of each tunnel when compared to those of the open road sections."<sup>22</sup>

RESPONSE: Snowshed issues on Snoqualmie Pass and elsewhere are known and are similar to challenges for overpasses, bridge abutments, and other similar structures along highways. For Alternative 2B, the snowsheds appear to be the best design solution. In addition, the two proposed tunnels are the preferred design solution for the terrain encountered. The tunnels are less than 800 feet in length.

For the record, we attach to a 2006 paper by Alaskan avalanche control expert David Hamre, *Advanced Technologies in Avalanche Programs*. This report is not cited in the references for the Snow Avalanche Report but should be considered because of its extensive discussion of avalanche mitigation technologies that have worked well in the Alaskan landscape. Additionally, we incorporate Hamre (1996) into our comments.<sup>23</sup>

RESPONSE: There are no "geotechnical and design uncertainties" associated with snowsheds or their mitigation capabilities; they are in common use all over the world, and their effectiveness is well-proven. All other mitigation factors applied are consistent with best engineering practices worldwide.

The mitigation measures in the Draft SEIS were properly investigated by professionals in the field of avalanche study and deemed sufficient. The authors of the 2014 and 2017 *Update to Appendix J, Snow Avalanche Report*, are quite familiar with Mr. Hamre's work and its results. It has been added to the *2017 Update to Appendix J, Snow Avalanche Report*, Section 13.10, Appendix 15 References.

The frequency-magnitude studies, while useful in some cases, are more theoretical and less accurate than the actual avalanche observations used for this study, and it should be noted such data are not available for the Coast Range of Southeast Alaska.

##### *5. The risk reduction estimate is unrealistic.*

According to Figure 4B of the Snow Avalanche Report, the consultants estimate that the proposed avalanche mitigation program will reduce the AHI risk by over 90%. This figure appears to be

---

<sup>21</sup> See Washington DOT, Draft Supplemental Environmental Impact Statement. I-90 Snoqualmie Pass East Project p. 2-1 (available at <http://www.wsdot.wa.gov/Projects/I90/SnoqualmiePassEast.draftSEIS>)(cited pages attached).

<sup>22</sup> See Caliendo & De Guglielmo at 176 (2012)

<sup>23</sup> See David, Doug McCarty, *Frequency/magnitude relationship of avalanches in the Chugach Range, Alaska, International Snow Science Workshop (1996)*.

extremely high, particularly given Southeast ADOT&PF's poor record on avalanche mitigation thus far, as well as the lack of specificity and experience with which the report was written. Along the Seward highway/Alaska Railroad where there are multiple full time avalanche forecasters and 25 years of experience running a mitigation program the risk has only been reduced to 50%. See Hamre, David. "Evolution of Avalanche Risk Reduction on the Alaska Railroad", International Snow Science Workshop Proceedings, 2009, p. 535; see also The Valdez Damalanche at 44 (ADOT&PF's avalanche mitigation efforts "[have] a success rate of just over 50 percent.").

RESPONSE: The risk reduction factors are consistent with those routinely achieved by modern avalanche programs worldwide. The program proposed for Lynn Canal follows current best practices, with multiple full-time forecasters for daily field presence.

Please refer to the *2017 Update to Appendix J - Snow Avalanche Report*, Section 3.1, Figure 2, for methods used on various highways worldwide, and the remainder of Section 2. as Also see Section 5, Avalanche Mitigation, for a discussion of reduction factors, especially Figure 4A, which lists mitigation factors achieved in other locations.

DOT&PF avalanche programs have been upgraded within the past few years. For example, preventive blasting has recently replaced waiting for slides to hit the road along such routes as the Richardson Highway to Valdez, and in the 2014-2015 season an avalanche specialist was added in the Southeast Alaska region. DOT&PF recognizes the seriousness of the need for adequate funding of avalanche programs.

Alaska Railroad programs have also been upgraded within the past 20 years. The Alaska Railroad faces problems unique to railroad operations in extremely difficult terrain and snow conditions that do not apply to highway operations in the very different terrain, snowpack, and weather conditions along Lynn Canal.

All the factors, raw data, and mitigation calculation spreadsheets used to calculate the mitigated Avalanche Hazard Index (risk reduction) are available in pdf format online at [www.juneauaccess.alaska.gov](http://www.juneauaccess.alaska.gov) ([http://dot.alaska.gov/sereg/projects/juneau\\_access/documents.shtml](http://dot.alaska.gov/sereg/projects/juneau_access/documents.shtml)).

The discussion in the *2014 Update to Appendix J - Snow Avalanche Report*, Section 6.1 Mitigated AHI Target Calculations, is an analysis of how well the goals were achieved, rather than the calculation of the risk reduction. The risk reduction factors for each path and for the overall avalanche program are listed in Section 6.3, Lynn Canal Avalanche Hazard Reduction Methods.

The level of specificity of the 2014 and 2017 *Update to Appendix J, Snow Avalanche Report*, is more than adequate for EIS-level evaluation. The experience of the authors and peer reviewers has been updated with resumes in the Final SEIS.

#### IV. DSEIS INADEQUATELY ASSESSES THE IMPACTS OF PREFERRED ALTERNATIVE ON MOVEMENT OF FREIGHT IN LYNN CANAL.

MAP-21 establishes national performance goals for Federal highway programs. One of those goals is to improve the national freight network and improve regional economic development. The DSEIS cannot cite to any specific evidence that this taxpayer boondoggle will actually improve the transport of freight up and down Lynn Canal. The failure to address this important issue in a thorough manner also fails to foster informed decision-making and informed public participation as required by NEPA.

RESPONSE: Citing National Performance Goals from MAP-21 relative to this project suggests a misunderstanding of those performance goals. MAP-21 is not project specific, but rather establishes broad goals to be achieved by the overall transportation system. In other words, not every project in the nation is expected to have as part of its purpose and need the improvement of the national freight network. The purpose and need for the Juneau Access Improvements project is not intended to promote freight shipment or “improve the transport of freight up and down Lynn Canal.” Contrary to the assertion, the Draft SEIS does evaluate the effects of the alternatives on freight movement. The Draft SEIS and the *Socioeconomic Effects Technical Report* (Appendix EE) explain that most freight would continue to move by barge under these alternatives. Barge transport has the advantage of being relatively low cost but has the disadvantage of being slow. Alternatively, air shipment is faster but has a higher cost. Highway transport offers a third option with faster delivery times than a barge to Seattle or other locations in the Lower 48 states at lower cost than air freight. Neither of the highway alternatives evaluated in the SEIS (Alternatives 2B and 3) would provide a direct highway connection to the continental highway system. However, it is anticipated that the higher frequency and low costs of the short shuttle links associated with these alternatives would be advantageous to trucking some freight and would generate truck shipping of fresh fish and other products.

According to the DSEIS, "Alternative 2B would affect freight movement to and through Haines." DSEIS at 4-51. Construction of a highway in the East Lynn Canal corridor would not affect existing barge service to Haines, but "[f]reight that is now shipped to Haines on the AMHS ferries ... would be off-loaded at Auke Bay, and trucked to Haines via the Katzeihin ferry." *Id.* The DSEIS does not estimate what the costs would be delivery freight to Haines along the highway, but according to AML, "[t]he cost of off-loading vans in Juneau and trucking to Haines would not be competitive with continued barge service to Haines." DSEIS at 4-51. ADOT&PF states that it costs 5 cents per pound to move freight by barge versus 25 cents per pound to move it by truck. *See* DSEIS at 4-62. The DSEIS does not disclose existing rates for shipping goods via the Alaska Marine Highway System. Without this key information, decisionmakers and the public cannot make an informed comparison of the alternatives.

RESPONSE: AMHS vehicle rates are based on the length of vehicle and origin/destination. Rate information is publicly available on the AMHS website. As the AMHS rates are not based on weight, a direct comparison of shipping costs is not feasible. The Draft SEIS does, however, qualitatively discuss anticipated changes in freight shipping. Section 4.3.7.5 of the Draft SEIS noted that Alternative 2B would not have substantially altered freight traffic between Seattle and Juneau or barge service to Haines and Skagway. Shippers would have been expected to continue using the most cost-effective method of shipping freight in Lynn Canal. However, it is anticipated that the higher frequency and low costs of the short shuttle links associated with the highway alternatives would have been found advantageous to trucking some freight and would have generated truck shipping of fresh fish and other products. Additional information has been added to the Final SEIS (Section 4.3.7.5 and 4.4.7.5 and Appendix EE) to discuss the cost differences concerning the current practice of shipping containers via AMHS vessels in Lynn Canal and the change proposed under Alternative 2B and 3 (whereby vans would need to be driven over the road and accompanied by a driver on the shuttle ferries). Note that even under Alternative 1 – No Action, which uses the Day Boat ACFs, unaccompanied vans will typically no longer be allowed, so these changes would only affect the discontinuation of mainline ferry service in Lynn Canal.

With regard to Skagway, again without disclosing specific rates for comparison ferry freight delivery, the DSEIS asserts:

Skagway would see reduced costs for freight shipped to/from Juneau.... The cost of transporting these vans [from Juneau] over Alternative 2B's highway and then by shuttle ferry from Katzehin [to Skagway] would be lower than the cost of all-ferry transport.

With the exception of freight currently moved from Juneau to Skagway on the ferry, Skagway is not expected to see any change in waterborne freight service with alternative 2B. The cost of off-loading vans or fuel in Juneau, trucking to Katzehin, and then shuttling to Skagway is more than the cost associated with barge transportation.  
DSEIS at 4-55.

The assumption, that hauling freight by truck for 91 miles to the Katzehin, and then transferring the freight to a day-boat for final delivery to Skagway is cheaper than utilizing the current Alaska Marine Highway System configuration appears implausible, particularly without disclosing cost data to support it.

RESPONSE: The freight shipments questioned by the commenter consist of container vans that are currently driven to Auke Bay, loaded on a ferry, transported to Skagway, and then driven to their final destination. The existing system allows vans to be unaccompanied between Auke Bay and Haines/Skagway, while freight would have to be accompanied (i.e. have a tractor and driver) the entire trip under Alternatives 2B and 3. Additional information has been added to the Final SEIS (Section 4.3.7.5 and 4.4.7.5 and Appendix EE) to discuss the cost differences concerning the current practice of shipping containers via AMHS vessels in Lynn Canal and the change proposed under Alternative 2B and 3 (whereby vans would need to be driven over the road and accompanied by a driver on the shuttle ferries).

The fallacy in ADOT&PF's claim can be seen by looking at history. Back in 1975, quite a stir was caused when AMHS proposed moving the ferry dock in Juneau from downtown 12.5 miles out to Auke Bay. According to Hank Noble, Foss Alaska Line's Juneau manager:

I can understand why the ferry system people would want to move out to Auke Bay, from their operational standpoint. ... but it's a question of how much fuel the ferries will save versus the extra fuel and time the people and trucking companies in Juneau will have to spend to get out to Auke Bay.

He said Foss drivers can load their cargoes of 24-foot vans in an average of one hour when the ferries dock downtown, but that it would take at least eight hours to do the same job if drivers had to pull the vans to Auke Bay. He said the biggest cost increases would be paid by residents of Haines and Skagway who receive about 16 vanloads per week by ferry.

See Ruhl, John, *State to Close Downtown Terminal*, SE Alaska Empire (April 29, 1975). The DSEIS fails to disclose and evaluate the fuel and time costs associated with loading and trucking freight from Juneau to the Katzehin for transfer to a ferry for delivery to Skagway as required by NEPA.

RESPONSE: Additional information has been added to Section 4.3.7.5 of the Final SEIS regarding

freight.

## V. ADOT&PF AND FHWA FAILED TO DISCHARGE THEIR AFFIRMATIVE RESPONSIBILITY TO CONSULT WITH AWK KWAN ABOUT IMPACTS TO CULTURAL AND HISTORIC PROPERTIES WHICH MAY BE IMPACTED BY THE PROPOSED ACTION.

According to the DSEIS, ADOT&PF sent letters inviting formal tribal consultation to 11 area tribes and Native organizations back in 2003, "with follow-up phone calls and face-to-face meetings when conducted." DSEIS, section 3.1.3 at 3-18. It does not appear that the agencies conducted any consultations with all the parties having consultative roles in the process mandated by section 106 of the National Historic Preservation Act.

Despite clear evidence over the past 17 years of Rosa Miller's demonstrated interest in the potential adverse effects of the proposed undertaking on Awk Kwan's ancestral lands in Berners Bay, and the fact we raised this need at both the draft and final stages of the last NEPA process, neither agency made any effort to consult with the Awk Kwan, Juneau's original settlers during this planning effort. This failure to follow the rules and consider the relevant factors not only violates standards promulgated by the Advisory Council on Historic Preservation but disrespects the Awk Kwan's time-honored connections to Berners Bay. *See* 36 C.P.R. 800.2(c)(5); *see also* Letter from Miller to FHWA Administrator Garcia-Aline and DOT Commissioner Kemp (November 24, 2014)(incorporated herein by reference).

RESPONSE: Consistent with requirements of Section 106 of the National Historic Preservation Act, Auk Kwan was not specifically consulted because it is not a Federally Recognized Tribe. However, as a part of the NEPA process, the Auk Kwan has been given multiple opportunities to provide input on the project. Comments from Auk Kwan members on the Draft SEIS have been considered and are addressed in Appendix JJ of the Final SEIS. FHWA and DOT&PF have followed State and federal regulations as well as FHWA guidelines regarding consultation with Federally Recognized Tribes.

The procedural short cut taken by the agencies makes the choice to limit your efforts to identify and evaluate historic properties during this supplemental NEPA process to conducting a "follow-up literature review" arbitrary. This failure to consult fully with all interested parties also prevented DOT&PF from considering impacts to historic and cultural resources in a thorough manner and did not foster informed decision-making and public participation as required by NEPA.

RESPONSE: As discussed in Sections 3.1.3 and Chapter 7 of the Draft SEIS, DOT&PF sent letters in September 2003 to eleven tribal organizations (Chilkoot Indian Association of Haines, Klukwan Inc, Golbelt Inc., Chilkat Village of Klukwan, Sealaska Corporation, Douglas Indian Association, Tlingit and Haida Central Council, Skagway Traditional Council, Auk Kwan Traditional Council, Sealaska Heritage Institute, Hoonah Indian Association), six of which are Federally Recognized Tribes; the State Historic Preservation Officer (SHPO); U.S. Forest Service (USFS); and National Park Service (NPS). The letters invited these entities to participate in the process of identifying cultural properties (prehistoric and historic) and determining the effects of the alternatives on such properties for the 2005 Supplemental Draft EIS. DOT&PF conducted follow-up phone calls and face-to-face meetings when requested by the Tribes and Native organizations. In August 2004, FHWA sent letters to these same entities, inviting them to comment on FHWA's determination of eligibility on historic properties for the National Register of Historic Places and determination of potential effects on any historic properties in the area of potential effect (APE).

In 2012, SHPO was consulted and concurred with the APE for the project and field methodology. In addition, SHPO concurred with FHWA's determinations of eligibility for all historic properties within the APE of Alternative 2B (with minor changes to the site boundaries) as discussed in Section 4.3.4. The Tribes and Tribal organizations were additionally notified regarding opportunities for input through scoping outreach, the notice of availability, and the public hearing process as part of the Draft SEIS. FHWA and DOT&PF did not receive scoping comments from Tribes or Tribal organizations but did receive comments on the Draft SEIS from Douglas Indian Association, Sealaska, and Auk Kwan. FHWA and DOT&PF have responded to Draft SEIS comments in this Final SEIS. These responses are included in Appendix JJ of the Final SEIS. The APEs have not changed between SHPO's concurrence and the Final SEIS. Following the additional consultation described below, FHWA and the DOT&PF have reviewed the existing analysis and determined that additional field investigations are not necessary (see paragraph below).

The investigations (research and field studies) of cultural resources presented in the Draft and Final SEIS are a synthesis of several technical reports and memoranda regarding historic and archaeological sites prepared for this project between 1994 and 2005. A follow-up literature review was conducted in 2012 to determine if any new information regarding cultural resources in the APE had become available since 2005. No new cultural resources were identified within the APE. Together, these documents comprise the cultural resources record for the project. In part, they include:

- Archaeological Inventory of the East Lynn Canal Alternative, Juneau Access Road Improvement Project. Gary Wessen, Elena Nilsson, Michael S. Kelly, and Sandra Flint. Dames and Moore, Inc., Chico, California. 1994.
- Archaeological Survey on the West Coast of Lynn Canal: William Henry Bay to Pyramid Island. Amy F. Steffian, Owen K. Mason, and Stacie J. McIntosh. Northern Land Use Research, Fairbanks. 1994.
- Inventory and Evaluation of Historic Properties For Lands Within the Area of Potential Effect from Addendum No. 1 to the Plan of Operation for the Kensington Gold Project Submitted by Coeur Alaska in April 2002. Brenden Raymond-Yakoubian. Integrated Concepts and Research Corporation, Anchorage. 2004.
- Juneau Access Road 2003 Cultural Resource Studies: West Lynn Canal Alternative Update and Skagway Approach Survey Results. Catherine M. Williams, Peter M. Bowers, and Lisa J. Slayton. Northern Land Use Research, Inc., Fairbanks. 2004.
- Determination of Eligibility for the Dalton Trail (SKG-052). Northern Land Use Research, Inc., Fairbanks. 2004.
- Determination of Eligibility for the Skagway Hydroelectric Complex District (SKG-189). Northern Land Use Research, Inc., Fairbanks. 2004.
- Determination of Eligibility for the Lower Dewey Lake Trail (SKG-203). Northern Land Use Research, Inc., Fairbanks. 2004.
- Juneau Access Road 2004 Cultural Resource Studies, East Lynn Canal Alternative Update. Michael R. Yarborough and Catherine M. Pendleton. Cultural Resource Consultants LLC, Anchorage. 2004.
- Juneau Access Road 2005 Cultural Resource Study, East Lynn Canal Alternative Update. Michael R. Yarborough and Catherine M. Pendleton. Cultural Resource Consultants LLC, Anchorage. 2005.
- Alaska Heritage Resources Survey database, State of Alaska Office of History and Archaeology, 2012

To protect sensitive site information, the data and analyses contained in these documents are only

summarized in the Draft and Final SEIS, although all the information therein was used in making determinations of eligibility and findings of effect. For example, the locations of sensitive archaeological and burial sites are not disclosed in the Draft and Final SEIS. It is understandable that a review of the Draft and Final SEIS could lead to confusion regarding the summary of this site information, since it does not include all site locations.

On February 25, 2016, meetings with Sealaska Corporation, Sealaska Heritage, Douglas Indian Association, Goldbelt Corporation, and SHPO verified that no previously unidentified sites of cultural or historic importance were missed in the analysis.

According to the DSEIS, the protocols developed for guiding archaeological inventories resulted in the surveying on the ground in "[a]reas with a high potential for past human occupancy (e.g., river and stream mouths, shoreline benches below 100 feet in elevation, and areas) of less than 25 percent slope) ...." DSEIS at 3-18. The DSEIS contains no discussion, however, about the effect of subsequent isostatic rebound on the physical location of cultural resources. As a result, surveys of lower elevations are unlikely to find evidence of habitation sites from this period or adequately evaluate the impacts of this proposal's alternatives on cultural resources.<sup>24</sup> Since this new science came out after the surveys done in 1994 and 2003, and the agencies didn't conduct additional surveys for this supplemental NEPA review, the agencies failed to consider all the relevant information and an important aspect of the problem.

RESPONSE: The effects of isostatic rebound (referred to as uplift in the SEIS) were considered as a part of the archaeological analysis. Section 3.2.1.1 of the Draft SEIS reported that after deglaciation, the gradual rebound of land that had sunk below its original level due to weight of glacial ice resulted in the emergence of marine deposits and uplifted rock faces. Clarifications and additional information have been added to Section 3.1.3 of the Final SEIS regarding survey methodology and considerations in the APE.

## VI. DSEIS DOES NOT COMPLY WITH NEPA.

As already noted above regarding the misleading, faulty, and incomplete consideration of traffic demand forecast modeling, costs, and safety, *supra* at 8-12, the content and preparation of this DSEIS fails to foster informed decision-making and informed public participation as required by NEPA. Additional inadequacies with the DSEIS are identified below.

### A. The Alternative Analysis Is Arbitrary.

The alternatives disclosed and evaluated in the DSEIS are not reasonable because the DSEIS fails to provide decisionmakers and the public with sufficient information to "make an informed comparison of the alternatives." *SEACC v. FHWA*, 649 F.3d, 1050, 1058 (9th Cir. 2011). (citations omitted). First, the No Action alternative violates NEPA because it does not reflect the status quo or actually serve as a benchmark for analyzing the action alternatives. Instead the DSEIS relies on assets "that have not yet been constructed" and what is essentially a hypothetical "current plan" that reflects "most likely AMHS operations" once, and if, construction of the new Alaska Class Ferry is completed on time. *See* DSEIS at 2-10,2-12.

---

<sup>24</sup> See Baichtal, J.F., and R.J. Carlson 2010. "Development of a Model to Predict the Location of Early-Holocene Habitation Along the West Coast of Prince of Wales Island and the Outer Islands. *Current Research in the Pleistocene* Volume 27: 64-67.

RESPONSE: The No Action Alternative for the project consists of the existing highway and ferry system (as of 2014) plus improvements programmed by DOT&PF. Programmed improvements were described in Section 2.3.1 of the Draft SEIS. Including programmed improvements as part of the No Action Alternative does not violate NEPA and is consistent with FHWA practice and guidance. A contract to construct the ferries was signed in fall 2014. The ferries are currently under construction at the time of this Final SEIS. It would be irresponsible to ignore improvements that are programmed and designed, and would be constructed prior to implementation of any build alternative.

We are also frustrated with Alternative 1B, proposed by ADOT&PF in response to the above ruling. *SEACC v. FHWA* at 1059. Alternative 1B mismatches capacity and demand by providing greater capacity than needed to serve the smaller demand port of Skagway. Alternative 1B also calls for a reduction in fares and increases in extending business hours at the reservation call center; measures that ADOT&PF considers of "no net benefit" in increasing ridership. See DSEIS, Appendix CC at 21. Until it completes a system-wide analysis of traffic, fares, and capacity, DOT&PF cannot meaningfully evaluate reasonable options for more efficient use of existing ferry system assets.

RESPONSE: DOT&PF and AMHS staff developed a new alternative based on direction from the District Court (and upheld by the U.S. Court of Appeals for the Ninth Circuit), shared a draft of that alternative with the public during a new scoping effort for the Draft SEIS, took input on the new alternative, and revised that alternative based on the scoping comments received. The new alternative took into account changes that had occurred to the "existing assets" in the AMHS fleet since the 2006 Final EIS, the capabilities of the vessels in the fleet, and the needs and mission of the fleet to the numerous communities served by AMHS. DOT&PF and FHWA fully disclosed the thought process and evaluation in the Draft SEIS. Appendix CC of the Draft SEIS described the efforts undertaken to develop Alternative 1B and documented the data and analysis relied upon to create as reasonable an alternative as possible toward solving the transportation problems in the corridor using only existing assets. Alternative 1B incorporated the following considerations:

- Existing AMHS assets reasonably available and feasible for use in Lynn Canal
- Programmed AMHS assets (decisions by AMHS independent of this project that made new Day Boats available in the fleet)
- Enhancements that could be employed that do not involve substantial initial capital investments

The resulting alternative, Alternative 1B, was rigorously analyzed in context of the project's Purpose and Need and as part of NEPA requirements for the consideration of alternatives.

Regarding the suggestion of a mismatch in capacity and demand, the Day Boat ACF cannot make a daily Auke Bay-Skagway round trip and comply with U.S. Coast Guard (USCG) work/rest requirements. USCG regulations dictate that a typical sailing schedule be completed in 12 hours, crew members have 70 hours of rest within a 7-day period, and the crew not be scheduled to work more than 12 hours in a 24-hour work day. Without modification of the vessel or the loading and unloading facility at the Skagway Ferry Terminal to decrease the Day Boat ACF's operating day, a daily Auke Bay-Skagway run would not be compliant with USCG requirements. The *M/V Malaspina* is able to make this run, even though it takes longer than 12 hours, because it has crew quarters onboard (the Day Boat ACFs do not) and sufficient crews to run 24 hours. This was one of the reasons the *M/V Malaspina* was assigned to the Auke Bay-Skagway run instead of the Auke Bay-Haines run for Alternative 1B as evaluated in the Draft SEIS.

To enable the Day Boat ACF to make the Auke Bay-Skagway run and be consistent with USCG

regulations would require capital improvements to the ferry terminals to convert them to drive through loading and unloading procedures (thereby speeding up the loading and unloading processes). Such capital improvements would be counter to the Court's directive to develop an alternative without up-front capital costs.

Based on the comment, DOT&PF and FHWA did modify Alternative 1B for the Final SEIS to better balance capacity and demand: during summer, the *M/V Malaspina* would make one round trip per day 5 days per week on a Skagway-Auke Bay-Skagway route. On the sixth day, the *M/V Malaspina* would sail on the Skagway-Auke Bay-Haines-Skagway route; on the seventh day, it would sail that route in reverse (Skagway-Haines-Auke Bay-Skagway).

Contrary to the comment, Appendix CC does not conclude there would be "no net benefit" to a reduction in fares and extended call center hours. In fact, Appendix CC of the Draft SEIS indicated that the reduction in fares increases ridership (p. 23-25) and reservations enhancement would have "little benefit in improving ridership but would improve customer service." (p. 19). For the Draft SEIS, DOT&PF and FHWA considered fare reductions and efficiencies in the call center because the plaintiffs in the 2006 lawsuit suggested those very kinds of improvements to maximize ridership and efficiency. Note, with improvements to the AMHS website resulting in an increase in website use for reservations, extended call center hours were dropped from Alternative 1B in the Final SEIS.

The Draft SEIS did not fail to address system-wide analysis. Appendix CC explained how Alternative 1B was developed and described why certain vessels are needed on certain routes. As explained in Appendix CC, DOT&PF considered technical capabilities of the vessels, vessel size, operating conditions, and the effect on the AMHS mission (i.e., could a vessel be moved or shared with other routes such that it could provide Lynn Canal service while also maintaining the level of service committed to the other communities). An examination of each vessel was disclosed in Appendix CC. In part, vessels were rejected as being reasonable for Lynn Canal service because it was found that reassigning vessels to Lynn Canal would be at the expense of reduced service elsewhere.

Alternative 1B was developed by AMHS and other DOT&PF professionals with years of optimization experience. They were able to develop a system management alternative that manages to make improvements over and above Alternative 1 – No Action. DOT&PF identified and evaluated Alternative 1B as a competing NEPA alternative. Alternative 1B addresses the Court's requirement to evaluate an alternative using existing assets. Alternative 1B uses existing assets, which results in an increase in AMHS service in Lynn Canal that would not require a reduction in service outside Lynn Canal.

We also recommend using variable pricing strategies like those used in the airline industry to fill seats on flights with excess capacity by reducing fares to help fill boats and increase revenues for the AMHS. Updating to a modern reservations and ticketing system offered by companies like PDMS (<http://www.ferrysoftware.co.uk/>) could allow for this strategy and benefit the entire AMHS.

**RESPONSE:** The reservation system used for the last 15 years was not capable of variable pricing. AMHS is renovating the reservation system and enhancing its capabilities and functionality. However, AMHS demand-based pricing must be justified on the basis of balancing service and cost.

AMHS will not be implementing a variable pricing system for the near term. However, in May 2016, as a result of the 2015 AMHS Rate Study, AMHS implemented a variable leveling tariff increase on all routes. The tariff increase would vary by route and would be divided out over a five-year implementation period. The purpose of this action is to level the AMHS tariff structure. Once the tariff

structure has been leveled, AMHS may consider further modifying the tariff structure consistent with recommendations from the 2015 AMHS Rate Study.

Using readily available information, however, the Skagway Marine Access Commission modified proposed Alternative 1B, which it dubbed, Alternative 1B Optimized. *See* 2014 Skagway Marine Access Commission DSEIS Comments. The Commission's Alternative 1B Optimized, incorporated here by reference, utilizes existing resources to increase service among the northern communities in Southeast Alaska, provides passengers with more travel options and flexibility, and costs less than Alternative 1B proposed by ADOT&PF.

The Commission also proposed an improved marine alternative in its comments on the DSEIS, which they refer to as Alternative 5, the All Alaska Class Ferry Alternative. *See, id.* Unlike either Alternative 1B or 1B Optimized, Alternative 5 calls for constructing a third ACF and retiring one aging mainline ferry. The cost of this alternative would be offset by the savings from the elimination of expensive mainliners in Lynn Canal. *Id.* Alternative 5 would provide a highly flexible transportation system that increases service in the Northern Panhandle without the huge capital investments and direct adverse impacts to Berners Bay from Alternatives 2B, and 4A-4D.<sup>25</sup> With this reference, SEACC encourages the agencies to take a hard look at this practical and economically feasible approach to meeting the basic transportation needs the public is entitled to in Lynn Canal.

RESPONSE: DOT&PF and FHWA have analyzed Alternative 1B Optimized and Alternative 5 proposed by the Skagway Marine Access Commission (SMAC) and have included the updated analysis and information Appendix II of the Final SEIS. The two new alternatives were labeled by SMAC as “Alternative 1B Optimized” and “Alternative 5.” DOT&PF has retained this labeling for convenience, but use of these labels should not be interpreted as conferring stature or reasonableness.

As noted in the Alaska Marine Highway System 2013 Financial Report, fuel costs make up roughly 21% of ferry operational costs. A recent announcement from British Columbia noted that BC Ferries is planning to substantially reduce fuel costs by converting the propulsion to dual-fuel capability, allowing the ships to operate on both diesel and liquefied natural gas.<sup>26</sup>

RESPONSE: Currently, natural gas is not a viable option in Southeast Alaska because no source is available. The new ACFs, which would be used in some of the alternatives, will use Tier III engines that operate at the highest efficiency. These engines can be converted to use natural gas in the future, should a natural gas supply be available; however, natural gas storage tanks would be required to be above deck, thus reducing passenger capacity.

Both the 2008 Tongass Plan and 2001 Roadless Area Conservation Rule require ADOT&PF and the FHWA to evaluate whether there are feasible alternatives to road construction through lands designated as Old Growth Reserves and whether the proposed road is in the public interest and no other reasonable and prudent alternative exists. *See* 2008 Tongass Plan at 3-61; 36 C.F.R. 294.12(b)(6)(2001). The DSEIS does not contain this evaluation. As the project applicant, it is the responsibility of the ADOT&PF and FHWA, not the Forest Service, to prepare this evaluation. Finally, the claim by ADOT&PF that section 4407 of SAFETEA-LU somehow exempts them

---

<sup>25</sup> *See generally* Rogers (1970) at 2-3.

<sup>26</sup> *See* Canadian Press, *The BC Ferries files application to convert two biggest ferries to diesel, LNG operation* (Sept. 22, 2014).

from complying with these laws is complete balderdash.

RESPONSE: The State of Alaska believes it currently holds an easement interest in each transportation and utility corridor established by Congress in SAFETEA-LU, Section 4407, as amended. Once the State of Alaska determines the precise location of the highway facility within the Section 4407 corridor, USFS must issue recordable documentation of the Congressionally established easement. Congress stated its intent that “the Secretary of Agriculture will not withhold or deny the issuance of an easement for a proposed transportation or utility project that otherwise has all necessary construction permits and authorizations from other State and Federal agencies.” (Senate Report 114-80:23-24; July 15, 2015). Thus, the USFS’s issuance of recordable documentation of the easement is a non-discretionary and ministerial act. The Secretary of Agriculture and USFS may be required to make a finding under the Roadless Rule and may need to complete a NEPA decision for a plan amendment related to adjusting Old Growth Habitat LUD boundaries to recognize the highway easement; however, these processes and decisions would be internal to the USFS and could occur after the completion of the Final SEIS.

The Roadless Rule excepts classes of road projects from its general prohibition on roads, including an exception when the Secretary of Agriculture determines that a road is provided for by statute or treaty (36 CFR 294.12(b)(3)). Transportation and utility rights-of-way and easements along the east and west sides of Lynn Canal were granted to the State of Alaska by Congress in SAFETEA-LU, Section 4407, as amended. Thus, the Secretary of Agriculture need only make an affirmative finding that Congress provided a highway easement by statute to fulfill the requirements of the Roadless Rule.

### **B. DSEIS Misleads Public by Inflating Traffic Demand, Invalidly Using Models and Bogus Assumptions.**

The travel forecast and estimates of user benefits made by ADOT&PF for this DSEIS fails to provide a reasonable thorough discussion of the issues raised by SEACC and others on this important issue. Although the FHWA's *Interim Guidance on the Application of Travel and Land Use Forecasting in NEPA* is voluntary, the serious problems that continue to plague ADOT&PF traffic forecasting over the past 10 years for the Katzehin Road Project indicate that much more needs to be done for the agency to come up with defensible forecasts.<sup>27</sup>

RESPONSE: Because there is no road linking communities in Lynn Canal, a forecast of surface transportation demand cannot be conducted in a conventional manner. The previous forecast was partially based on the results of two household surveys. The household surveys indicate people’s perceived behavior but may not reflect actual travel behavior. The project team is aware of FHWA's *Interim Guidance on the Application of Travel and Land Use Forecasting in NEPA*. The team followed a process consistent with the recommendations from that guidance and implemented many of the recommendations, including conducting a conceptual review of the analysis, identifying analysis years and geographic scope of the analysis, considering the suitability of modeling methods and appropriate tools, reviewing previous forecasts, and calibrating and validating the forecast and checking it for reasonableness. As recommended in the guidance, the modeling was peer reviewed.

The Traffic Forecast Model for the SEIS was developed based on empirical data derived from actual travel conditions observed in Alaska and Western Canada, from communities with similar geographic characteristics as Juneau. It was validated against existing travel demand by ferry within Lynn Canal.

---

<sup>27</sup> See, Moniak, Rich, *My Turn: How ADOT&PF ignored best practices for Juneau Access* (sic), Juneau Empire (Nov. 7, 2014).

To forecast traffic demand for each of the alternatives, the model considered various factors relating to travel time, cost, and convenience of travel.

In developing the model, the project team looked at changes in travel options in Lynn Canal during the periods noted above. Ferry ridership demand changes occur for various reasons. The travel choice model is sensitive to several variables, including travel time, travel cost, and frequency of travel. The model was calibrated to match empirical evidence from 1997-1998 and 2004-2007 as well as possible. The evidence suggests that cost and convenience of travel are more likely to affect travel behavior than ferry travel time when compared with existing service levels. In response, the project team modified one of the model variables (i.e., the service index) from its initial formulation to reflect the reduced effect of travel times on the forecasted demand. While the alternatives under considerations include more substantial changes in service than have been experienced previously in Lynn Canal, it is possible that the demand forecasts are conservatively high for some of the marine alternatives. However, the fact that the model did a good job of matching existing Lynn Canal ridership means that the travel choice model was reasonably validated and applied.

The user benefits did not rely on a traditional cost-benefit analysis where all costs and benefits are described quantitatively, if possible, and qualitatively otherwise. That type of cost-benefit analysis is not required by NEPA and has not been conducted as part of this SEIS. Analysis of the economic efficiency and cost-effectiveness of project alternatives has been limited to User Benefit Analysis, Life Cycle Cost Analysis, and Total Project Life Cost Analyses. Conducted in accordance with standards set by the American Association of State Highway and Transportation Officials (AASHTO), these analyses do not, and are not intended to, consider the full spectrum of costs and benefits. Project economic efficiency and cost-effectiveness analyses did not include economic benefits associated with each alternative (e.g., from commercial or industrial development) or effects on environmental values or amenities.

Benefit/cost ratios described in the Draft SEIS were not intended to represent a full measure of all benefits and costs associated with project alternatives. In fact, benefit cost ratios described in Appendix FF of the Draft SEIS were narrowly based on user (traveler) benefits alone and did not consider a wide range of other potential household, commercial, industrial, and community benefits associated with improved Lynn Canal access. The purpose of the economic efficiency and cost-effectiveness analysis conducted as part of the Draft SEIS was to determine which alternatives serve the largest number of users/travelers and have the lowest possible cost.

### **C. The DSEIS does not Accurately Describe the Impacts of Alternative 2B on the Alaska Marine Highway System.**

In the press release announcing the release of the DSEIS, Commissioner Kemp claimed that constructing the Katzehin road would have huge benefits to the rest of the ferry system.<sup>28</sup> We believe the opposite is true; Alternative 2B will be a tremendous detriment to the rest of the ferry system because it will steal capital construction dollars from replacement ferries and it will increase the operating cost for AMHS while jeopardizing revenue.

As we noted, *supra* at 6-7, the Katzehin road would consume double the new construction budget for the region leaving no money to purchase new mainline ferries in the foreseeable future, even though ADOT&PF acknowledged in its 2014 draft SATP that the aging vessels should be retired in the next 10 years.

---

<sup>28</sup> ADOT&PF, Press Release: *Juneau Access Draft SEIS Available for Public Review* (Sept. 18, 2014).

RESPONSE: Selecting an action alternative with capital cost would have resulted in other transportation needs being deferred. It is unknown which future projects would have been deferred. Prioritizing the use of NHS transportation funds is DOT&PF's responsibility. DOT&PF is continually reconsidering where to spend available transportation funds. That prioritization is done through the STIP, which is published in draft form for public review and comment before approval. The STIP is frequently modified each year to account for shifting priorities around the State. The STIP is approved by the DOT&PF Commissioner and FHWA. The Legislature provides DOT&PF with authority to spend money on a project-by-project basis, and allocates funding for the State's match through the capital budget. This process is responsive to funding availability; to ongoing assessment of the condition of roads, bridges, ferries, and terminals; to assessment of traffic and needs; and to shifting federal and State legislation.

Commissioner Kemp states that cutting off 100 miles off of mainline ferry service allows the vessels to get to more communities more quickly. However, if there are no mainline ferries because they have broken down his department predicts they will and no steps have been made to replace them, then all other coastal community outside the Lynn Canal will experience a tremendous reduction in ferry service.

The DSEIS finds that the Katzehin road and shuttle ferry will increase the burden on the ferry system without increasing the revenue. The maintenance and operating costs for Alternative 2B is \$20.4 million annually, \$17.6 million of which is for operating the Katzehin shuttle ferry and terminal. See DSEIS at 2-16. In comparison, the No Action Alternative has an operating cost of \$15.4 million annually, with \$7 million coming back in revenues. *Id.* at ES-16. In other words, under Alternative 2B the burden on the Alaska Marine Highway System would go up \$2.2 million annually, with revenue staying flat at \$7 million.

To make matters worse, we believe that the revenue projections for Alternative 2B are wildly optimistic. Unlike the proven high-cost low-volume scenario represented by the No Action Alternative, Alternative 2B depends on the opposite and more risky high-volume low-cost scheme. The ten-fold increase in traffic traveling in the Lynn Canal corridor predicted for Alternative 2B is simple fantasy. See DSEIS at 4-58; see also Marshall, *supra* note 2. The State will end up further subsidizing the AMHS when revenues plummet because the predicted traffic volumes failed to materialize, as occurred with DOT's Whittier Tunnel Project a decade earlier.<sup>29</sup>

The DSEIS and associated documents should be changed to accurately describe the deleterious impact Alt. 2B will have on the Alaska Marine Highway System.

RESPONSE: For clarification, the Draft SEIS estimated AMHS revenues for Alternative 1 – No Action and Alternative 2B as \$7.7 million and \$10.4 million, resulting in an estimated net annual General fund cost (expenses minus revenues) of \$7.7 million for Alternative 1 – No Action and \$7.2 million for Alternative 2B (see page 4-63).

In the event traffic does not materialize as projected, AMHS has flexibility to adjust fares, reduce hours of operation, and/or reduce the number of vessels with the intent of scaling the AMHS assets/effort

---

<sup>29</sup> See Forgey, Pat, *Will proposed Knik Arm Crossing follow lead of Alaska's other toll road, the money-losing Whittier tunnel?*, Alaska Dispatch News (August 16, 2014) available at <http://www.adn.com/article/20140816/will-proposed-knik-arm-crossing-follow-lead-alaskas-other-toll-road-money-losing>

with demand.

#### **D. DSEIS Ignores Adverse Effects on Independent Travelers.**

Back in the mid-1970s, an Alaskan author opined:<sup>30</sup>

The Alaska Marine Highway sells or offers for sale a "Product", in addition to a service. What is this product? Why, the Ferry System itself (and) the resplendent maritime scenery through which it travels. . . . This product ... is reflected in the ships, the crewmembers, the convenience and efficiency of operation, the concept of purpose. . . . A ship staffed be (sic) a pleasant, attentive and proud crew offering that fine food and courteous service. This is the Product! This is the experience that people will pay for and should always come to expect."

A 2009 report done by the Alaska University Transportation Center for the AMHS and ADOT&PF noted the "unique mode of independent travel" offered by the AMHS, "a flexible and 'off-the-beaten path' style of travel. . . . Independent traveler research shows they consider the AMHS a pleasant alternative to the rigid travel schedules imposed on Alaska's package tour visitor."<sup>31</sup> We found no evidence in the DSEIS and supporting appendices that the agencies or their consultants considered this key document.

As noted in Marshall, *supra* note 2, at 12:

The enormous growth of the cruise ship industry has shown that there is a huge market for vacation travel without the encumbrance of personal vehicles. Many tourism industry groups throughout the U.S. are working towards making offerings that more attractive to such travelers including improving intermodal connections, services within walkable areas, and providing good traveler information. Alternative 2B probably would largely kill this market off. Even if good bus service were provided to the new terminal, most travelers to coastal Alaska are not doing so to ride buses. This market and the effects of the alternatives on it should have been analyzed in the DSEIS.

If these passengers without vehicles continue to travel using Alternative 2B, they will incur significant increased out-of-pocket costs that are not considered in the DEIS. If they choose not to travel, the Alaska economy will suffer.

**RESPONSE:** The Draft SEIS did not ignore impacts to independent travelers. As discussed in the Draft SEIS, all of the project alternatives were projected to increase independent tourist visits to Lynn Canal communities; however, Alternatives 4A and 4C were anticipated to have the least effect on independent visitor traffic (Section 4.5.5). Alternatives 2B and 3 were projected to result in the largest increase in independent tourist visits (Section 4.3.5 and 4.4.5).

Independent travelers who rent cars or get rides from others in cars are accounted for in the vehicle

<sup>30</sup> See MeVaugh, William F., *Thoughts, Answers, Management Suggestions - A personalized look at the ALASKA MARINE HIGHWAY* (197?)(excerpts attached).

<sup>31</sup> Alaska University Transportation Center, AMHS Analysis, Phase I: Establishment of System Baseline at 32 (Feb. 2, 2009).

estimates. The road alternatives (2B and 3) represent a shift in the way transportation would have been provided in the corridor for independent travelers who wanted to walk onto the ferries—away from a primarily public transportation mode that operates more like a public transit service, to a highway system in which private vehicles provide most of the transportation (shuttle ferries on short routes would provide links connecting the roadways). The SEIS acknowledges the impact to travelers wishing not to take a vehicle. As explained in Section 1.4.1.1 of the Draft SEIS, the State’s primary responsibility is to provide a transportation facility for vehicles, not the transportation itself. The impacts to walk-on passengers for Alternatives 2B and 3, including costs, are addressed in Sections 4.3.7.5 and 4.4.7.5 of the Draft SEIS under the subheadings “Pedestrians and Bicyclists.” Based on the comment, additional information about the anticipated cost for the various travel markets (walk-ons, single drivers with a vehicle, etc.) have been added to these sections in the Final SEIS.

Without any backup at all, the agencies respond to scoping comments by claiming that:

Improved access to Juneau [via Alternative 2B, of course] would redistribute within the state some of the economic benefits received from one of Alaska's primary industries, the visitor industry. Independent visitors (i.e., non-cruise ship visitors) could shift their travel patterns, perhaps spending more time and money in Southeast Alaska, particularly in Juneau."

DSEIS at 7-7. In the effects analysis, again without citation to any supporting evidence, the agencies assert that "[t]ravelers without vehicles would be forced to rent vehicles, take a commuter flight, or travel on private carriers (if they develop) to accommodate this demand."

The failure to consider effects of project alternatives on the "out-of-state non-vehicle" market, and the adverse economic effects on local communities and industry if this segment of the visitor industry choose to go elsewhere instead, violates NEPA. The agencies' failure to consider an important aspect of the issue, and consider readily available records, is arbitrary.

RESPONSE: The Draft SEIS does evaluate the economic effects of changes in travel patterns on the tourism economy. The Draft SEIS stated that Alternatives 2B and 3 would have increased mobility for both Alaskans and visitors traveling through Southeast Alaska by shifting the limitations of long-distance ferry service to a network of surface transportation connections, which would have consisted of road links and short-distance ferries.

As documented in Sections 4.3.5.1 and 4.4.5.1 of the Draft SEIS and Sections 3.1.4.4 and 3.1.5.3 of Appendix EE, *Socioeconomic Effects Technical Report*, Alternatives 2B and 3 would have been expected to increase the number of independent visitors to Lynn Canal communities and would not have impacted the cruise ship industry.

### **E. The DSEIS fails to adequately evaluate safety**

The general safety statistics cited by ADOT&PF fail to satisfy NEPA's information and public awareness goals and ignore an important aspect of the problem. According to the DSEIS, the crash rate on roads similar in size to Alternative 2 averages 600 accidents and 5 fatalities over the course of 30 years. See DSEIS at 4-63. The 50-plus miles of new pavement to the Katzechin can, in no way, be considered an average road. First of all, there is the setting. The sheer cliffs dropping off into North America's deepest fjord equate to a constant rock fall threat on one side and sheer cliffs

on the other. The route will go through 5 different tunnels. Because of the change in lighting and temperature, tunnels have a higher accident rate than stretches of non-covered road.<sup>32</sup> The freeze-thaw cycle that is the hallmark of this northern coastal temperate rainforest for 6 months of the year makes icing a threat to begin with. According to the DSEIS, portions of the road will also dip below mean-high tide, DSEIS at 4-91, further exposing the road surface to sea-spray and mist kicked up by the heavy winds that characterize the Lynn Canal.

RESPONSE: The *2017 Update to Appendix D - Technical Alignment Report* has been updated to include a discussion of the geologic hazards and the proposed mitigation measures to address those hazards. Avalanche mitigation is discussed in the *2017 Update to Appendix J - Snow Avalanche Report*. The Final SEIS at Sections 4.3.7.5, 4.4.7.5, and 4.6.7.5 has been updated to explain the hazards of icing, high tides, freezing rain, icing on bridge decks, and wind conditions with respect to the road segments included in Alternatives 2B, 3, 4B, and 4D. These impacts and freeze-thaw conditions are no different than for any other road in Southeast Alaska. These conditions are difficult to predict and evaluate; however, the proposed measures to reduce these hazards would mitigate the risks of geological and meteorological events on highway safety. The road alternatives would be maintained by DOT&PF when these hazardous conditions are encountered.

The study cited states that “literature shows that different results have been obtained with regard to accident rates in tunnels when compared to those of open roads” (page 168). It also states that “in general it cannot be concluded that safety in tunnels is always lower than that of motorways. Apart from driver behavior and visibility, tunnel safety is affected by the geometric and traffic characteristics of the specific tunnel” (page 178). As this study is focused on severe accidents that occur in Italy in unidirectional tunnels, the results may not be applicable to tunnels proposed as part of Alternative 2B. The crash rate used to calculate the crashes in the Draft SEIS was based on Statewide crash information for Rural Other Principal Arterials in Alaska between 2002 and 2012.

High tides are not a concern because the driving surface elevation for the road alternatives has been designed to account for extreme high tides and storm events. The road would not “dip below mean-high tide.” The text referenced on page 4-91 of the Draft SEIS identified necessary permits. It indicated that fill would be necessary below mean high water, requiring a permit from the U.S. Army Corps of Engineers. The fill would be placed to bring the road grade up to a level that meets acceptable engineering standards, to ensure it would not be compromised by coastal flooding.

Lastly, the remote nature of this road will surely increase the death rate. The closest emergency services will be at the Lynn Canal fire station in Tea Harbor, roughly 70 miles from the Katzeihin, and is currently staffed part time by volunteers. What could have been a bad accident in town will undoubtedly be a fatality out the road given the slow response times.

RESPONSE: The Draft SEIS disclosed the effects of remote travel with respect to public safety in Section 4.3.5.1 and the effect to emergency response agencies in Sections 4.3.5.3 and 4.3.5.4. The changes in crash rates and estimated fatalities based on Statewide crash information for Rural Other Principal Arterials between 2002 and 2012 are described in Sections 4.3.7.5 and 4.3.7.5 of the Final SEIS. Many Rural Other Principal Arterials are remote in nature and are not in close proximity to emergency service providers.

As outlined in the section of our comments on avalanches, the DSEIS does not appear to account for operator deaths due to avalanches. See, *supra* at 8-12. This is an important figure, especially

---

<sup>32</sup> See Caliendo, C. & De Guglielmo (2012)

considering that more operators than travelers have been killed in avalanche-related deaths along Alaska's roads and railways.

RESPONSE: The *2014 Update to Appendix J - Snow Avalanche Report*, 6.2.1 Risk Management Analysis of Three Very High AHI Highways, provides a detailed comparison of death rates on highways with similar AHIs. It also accounts for the deaths in Alaska for both traveling public and highway workers due to avalanches and highway with a high AHI.

The material in the *2017 Update to Appendix J - Snow Avalanche Report*, Section 6.2 AHI Values and Risk to Travelers and Workers compares public and worker deaths on high-AHI highways and now states that “The higher risk to highway workers underscores the need for strict adherence to the avalanche program and risk management protocols presented in this study, particularly when reopening the highway after avalanches have occurred. Workers are at risk both during the construction and operations of all highways through avalanche terrain, and such work must be conducted only under the provisions of an operational safety plan and with an active avalanche forecasting, training, and mitigation program.” While development of an operations plan is required during the final design phase, key concerns and typical risk mitigation measures detailed in the *2017 Update to Appendix J - Snow Avalanche Report*, Section 6.4 Operational Avalanche Risk Management Program, include forecasting, closures, allowing debris removal only with the approval of the avalanche forecaster, and specific provisions for clearing debris. Sample protocols with specifics for risk reduction at various avalanche danger levels are provided in Section 13.1 Appendix 6: Highway Closure and Operation Criteria.

Sections 12.4 Appendix 4: Highway Closures, 13 Appendix 5: Transportation Avalanche Danger Scale, and 13.1 Appendix 6: Highway Closure and Operation Criteria outline the need for operational worker risk reduction programs and contain examples of the material in such operational plans. Appendix 6 states that “These guidelines are a sample of the kind of material that is part of a project-specific operational avalanche plan and are not a substitute for such a detailed plan. A project-specific plan is required under Alaska case law for worker safety before construction or operation of an avalanche-exposed facility may proceed. Planning at that level is beyond the scope of this report.”

Members of the public also discovered that the base calculation for the number of deaths expected on a road of this size for travel between Auke Bay and the Katzehin should be 15 people over the course of 30 years, not 5 as originally reported in the DSEIS. *See supra* note 18. We concur with SMACs conclusion and ask that the base number be changed to accurately calculate projected fatalities over the life of this project between Auke Bay and the Katzehin.

ADOT&PF must revise the accident and fatality estimates to reflect the known safety risks associated with Alternative 2B.

RESPONSE: Regarding crash statistics reported in the Draft SEIS, DOT&PF and FHWA reviewed the calculations and found an error in the computation for the number of fatalities. The error in the Draft SEIS has been corrected in Sections 4.3.7.5 and 4.4.7.5 of the Final SEIS. In addition, the fatal crash rate and the crash rate used in the calculation of number of fatalities and crashes was changed from an Undivided Urban and Rural Interstate classification to Rural Other Principal Arterials to more accurately reflect conditions on the Alternative 2B and 3 roadways.

Road proponents have often referred to Highway 1 in California as proof that a highway can be built along a steep and sliding landscape, however in our preliminary research, it does not appear to

be a successful example. Frequent rock and landslides have wreaked havoc on the road and prompted frequent closures.<sup>33</sup>

We have observed that the section of the Seward Highway between Anchorage and Portage Glacier is slated for Intelligent Transportation System (or ITS) improvements including an automated anti-icing/de-icing system.<sup>34</sup> Given that the Juneau road extension is similar too, if not more dangerous than this stretch of the Seward Highway, we request that fixed automated anti-icing technology (FAST) is used throughout the system. Additionally, we urge the department to use the most effective, least toxic de-icing agent. On preliminary reviews, these seem to be liquid potassium acetate<sup>35</sup> or magnesium chloride.<sup>36</sup>

RESPONSE: The use of automated de-icing systems on bridges would be considered during the design phase based upon the technical and economic feasibility. However, fixed de-icing systems are not common in Alaska and there is no crash data in Alaska that suggests icing on bridges causes a higher crash rate than other portions of the roadway. Through an experimental project, de-icing systems were installed on two of the Knik River bridges in Southcentral Alaska. These systems were expensive to install and even more so to maintain. To date, an automated de-icing system has not been installed on the Seward Highway and there is no intention to do so now.

#### **F. The Superficial Evaluation of the Risks from Exposing Rock with Acid-Generating Potential is Inadequate in the DSEIS Violates NEPA.**

In evaluating the potential that blasting activities associated with road construction in the Alternative 2B corridor, ADOT&PF asserts that "[b]ased on available information related to geologic features ... DOT&PF anticipates no development of acid-generating waste rock or rock with high total metals content." DSEIS at 4.3.8.4, p. 4-68. This information is inconsistent with information available to SEACC, as well as the Forest Service and Alaska Departments of Environmental Conservation and Natural Resources. ADOT&PF failed to take a hard look at this issue and satisfy NEPA's information and public awareness goals.

According to a Forest Service inspection report dated June 5, 2013, "Acid rock drainage (ARD) ... is coming from [graphitic phyllite] rock that was excavated during the phase 2 construction of the dam [during the summer of 2012]." Agency reports describe unsuccessful efforts taken by Coeur to contain and remediate the seepage, including removal of 14,000 tons of graphitic phyllite,<sup>37</sup> and limiting infiltration and exfiltration of oxygen and water into the exposed graphitic phyllite with shotcrete.<sup>38</sup> For the record, every inspection report from July 2012 until September 2013 acknowledged this issue and is available at the Kensington DEC Inspection Report Archive on DNR's Large Mine Permitting website.<sup>39</sup>

<sup>33</sup> See CALTRAN, *Why we need... a bridge at Pitkins Cove* (available at [http://www.dot.ca.gov/dist05/projects/pitkins/whybridge\\_shed.pdf](http://www.dot.ca.gov/dist05/projects/pitkins/whybridge_shed.pdf)).

<sup>34</sup> DOT&PF, 2012-2015 STIP, Amendment II at 268 (Sept. 16, 2014)(available at <http://www.dot.state.ak.us/stwdp!ng/cip/stip/assets/STIP.pdf>).

<sup>35</sup> See Louwagie, Pam and Dan Browning, *Bridge de-icing system coming under scrutiny*, Star Tribune (Aug. 22, 2007)(available at (<http://www.stmiribune.com/local/11593846.html>)).

<sup>36</sup> See Bell (2006)(available at <http://www.coloradodot.info/progrmns/research/pdfs/2005/fast.pdf>).

<sup>37</sup> See, USFS, Inspection Reports 119 md 124, Kensington Gold Mine at 2 (June 5, 2013).

<sup>38</sup> See Department of Natural Resources (DNR), Inspections of the Kensington Gold Mine (Aug. 8, 2013).

<sup>39</sup> See [http://dnr.alaska.gov/mlw/rnining/largemine/kensingtonlarchive\\_inspections.cfm](http://dnr.alaska.gov/mlw/rnining/largemine/kensingtonlarchive_inspections.cfm). No inspection reports have been posted on DNR's website in 2014.

Similarly, based on available information, the ADOT&PF "anticipates no development of acid-generating waste rock or rock with high metals content" in the West Lynn Canal corridor for Alternative 3. DSEIS, part 4.4.8.3 at 4-119. In violation of NEPA, ADOT&PF apparently didn't take a hard look at the Special Publication of the federal Bureau of Mines' Mineral Investigations from 1984-1988 in the West Lynn Canal Subarea.<sup>40</sup> "The results of this effort show the West Lynn Canal subarea to have significant potential for containing volcanogenic and sediment hosted massive sulfide deposits." *Id.* at C-31. Known stratiform sulfides occur dominantly in volcanic rocks in the northern third of the area, but stratiform occurrences also are present in sedimentary units in the southern portion. *Id.* at C-5. Minerals in these occurrences include pyrite (iron sulfate), chalcopyrite, sphalerite (zinc sulfate), pyrrhotite (iron sulfide), galena (lead sulfite), and arsenopyrite (iron-arsenic sulfate). All of these minerals are known to cause acid rock drainage when exposed to air and water.

The harmful and costly consequences that can result from road construction on Southeast Alaska's heavily mineralized landforms was demonstrated during the upgrade to the Coffman Cove Road on Prince of Wales Island. There, about 80,000 cubic meters of B-5 fill pulled from a roadway cut and used on more than 3 miles of road oxidized into sulfuric acid and damaged high value remote ecological and recreational stream and wetland resources. As reported on the Department of Environmental Conservation's Contaminated Sites Database, "Observed iron (III) hydroxide, 'yellowboy' inundated streams exhibit no aquatic life; anadromous fish habitat is directly affected."

RESPONSE: Based on recent experience in Southeast Alaska and available information related to geologic features in the Alternative 2B and 3 corridors (see *2017 Update to Appendix D – Technical Alignment Report* in Appendix Z), DOT&PF believes there is a potential for encountering acid-generating rock during construction of Alternative 2B or 3. On-site investigations to date have not identified acid-generating rock within the limits of the Alternative 2B and 3 alignments. The rock type responsible for acid generating rock would be identified in final design level geotechnical investigations. Once the presence of this rock type is identified, it would either be avoided or a plan would be established for the appropriate use or disposal of the material.

### **G. DSEIS' Evaluation of Costs is Incomplete.**

There are a number of costs that are not included in the DSEIS. As mentioned in earlier, the DSEIS does not attempt to address what the cost for providing public safety will be for both the State and municipalities, nor does it disclose the financial burden of lives and goods lost to avalanches, landslides and other known geological hazards, also outlined earlier.

RESPONSE: The Draft SEIS and Section 3.3.1.3 of the *Socioeconomic Technical Report* (Appendix EE) included a public safety analysis for each project alternative. DOT&PF and FHWA acknowledge that project alternatives would have had an impact on emergency service providers. DOT&PF and FHWA have disclosed the environmental consequences of the proposed alternatives in the Draft and Final SEISs, including the indirect effects described in the comment. Cost-benefit analyses can include a wide array of inputs, many of which are very difficult to monetize and can make the cost-benefit analysis controversial and difficult to understand. DOT&PF and FHWA believe the cost-benefit analysis presented in the SEIS is a reasonable approach for comparing the economics of the

---

<sup>40</sup> See Clough & Redman at C30 (1991)(cited pages from Special Publication).

alternatives, but it is just one consideration among many others that are addressed qualitatively and quantitatively in the SEIS. A cost-benefit analysis that attempts to compute a dollar figure for the types of impacts identified in the comment would be highly speculative and not a wise use of public funds. Consistent with NEPA regulations, the indirect impacts analysis provided in Chapter 4 of the SEIS discloses the potential impacts quantitatively when possible, and qualitatively when not.

The DSEIS also does not address the cost to provide for homeland security at the Katzehin ferry terminal. With ever-more stringent protocols how will this issue be dealt with at an unmanned ferry terminal?

RESPONSE: No additional costs associated with security at the Katzehin Ferry Terminal are anticipated because security would have been provided by the ferry crew. Under Alternative 2B, all passengers and vehicles would have been required to off load from the ferry at its destination. After the off-loading procedure had been completed, AMHS vessel staff would have conducted a security inspection of the vessel prior to the boarding of passengers and vessels for the return trip. This is consistent with U.S. Department of Homeland Security guidelines. Many existing AMHS ferries undergo a different process because the routes have intermediate stops (i.e., passengers and vehicles remain on the ferry at each stop), preventing AMHS from doing a security sweep of an empty vessel before continuing its route.

Perhaps most concerning to us is the failure to account for the cost to the environment and managing, mitigating, or avoiding those damages.

RESPONSE: The “costs” to the physical, natural, and social environment are the main topic of the entire SEIS. The SEIS discloses all known impacts, both beneficial and adverse, as required by NEPA. Where possible, impacts are quantified, and elsewhere qualitative analysis is provided. Commitments to manage, mitigate, or avoid environmental damage are part of the project and its costs, as disclosed in the SEIS.

The AASHTO sets the standards and guidelines for transportation projects across the nation. An October 2008 report found that environmental costs are often underestimated. The report recommends an approach for accounting for these costs which we encourage DOT&PF to utilize.<sup>41</sup>

RESPONSE: DOT&PF and FHWA have disclosed the environmental consequences of the proposed alternatives in the Draft and Final SEIS, including the indirect effects described in the comment. Transportation EIS documents are not required to, and typically do not, present impacts to the environment in financial terms. The “costs” to the physical, natural, economic, and social environment are the main topic of the entire SEIS. The SEIS discloses all known impacts, both beneficial and adverse, as required by NEPA. A cost-benefit analysis that attempts to compute a dollar figure for the types of impacts identified above would be highly speculative and subjective, and not a wise use of public funds. Because the indirect impacts have been disclosed quantitatively where possible, and qualitatively elsewhere, FHWA has met its requirements under NEPA. Commitments to manage, mitigate, or avoid environmental damage are part of the project and its costs, as disclosed in the SEIS.

The DSEIS fails to consider the costs that will be imposed on the Alaska Department of Fish and Game (ADF&G) for fish and game management if access to Berners Bay is expanded by Alternatives 2B and 4A through 4D. On the one hand, DOT&PF places a positive spin on the amount of hunting and fishing opportunities that will now be open to residents and tourists. *See*

---

<sup>41</sup> See ICF et al., (2008)(excerpts attached)

DSEIS at 4-36. On the other, although it acknowledges that road access under Alternative 2B or 3 will increase hunting pressure, *id.* at 4-37, the DSEIS makes no effort to analyze the costs to ADF&G to manage these new harvest opportunities. ADF&G is required by law to manage fish and game populations in a sustainable manner. This requires research to estimate populations and monitor the harvests. Obviously additional ADF&G biologist in both the research and management sections will be required. The DSEIS does not address these additional costs to ADF&G. Will additional wildlife protection officers also be required?

RESPONSE: A positive spin has not been placed on the amount of hunting and fishing opportunities that would now be open to residents and tourists. Section 4.3.15 of the Draft SEIS acknowledged that trappers, hunters, and fishermen could benefit from improved access but this improved access would result in the consideration of management actions by the ADF&G to manage wildlife populations. Section 4.3.15 of the Final SEIS has been updated to state that ADF&G confirmed in January 2016 that no additional staff is anticipated to manage additional harvests that may occur as a result of Alternative 2B.

More specifically, ADOT&PF funded a study by the ADF&G of brown bear abundance, space use, and habitat use in Berners Bay, yet used little of the information for siting the road. The Berners Bay brown bear population is of particular concern because it is fairly insular, showing little gene flow with other mainland populations (e.g., in the Stikine- Bradfield Canal - Unuk River areas) or with island populations (e.g., Admiralty Island). One reason this population remains viable is because it is difficult to access the area and thus to hunt these bears. As a result, human-caused mortality is pretty low in the population. Putting this road through the Berners Bay grass flats area may drastically change this. The road, and associated pull-outs will make hunting these bears much easier. "Non-intentional" killing of bears (mostly due to defense of life and property kills) will likely increase significantly. The road alignment for Alt. 2B will cross both the Berners Bay and Katzehin grass flats.

The ADF&G study showed more than 32% of all bear locations were within 0.6 mi of the proposed route, especially during spring and summer. Mid-June to mid-July is the brown bear mating season. In this population (as opposed to island populations elsewhere in Southeast Alaska), breeding takes place at the low-elevation grass flats. Thus, during late June, bears will be attempting to breed right in the area where this road will be constructed. The increased access from the road will lead to human - bear interactions during a time of year when bears do not always follow the "classic" behavior patterns. For example, during mating season, male bears will follow female bears to the point of harassment. This often causes female bears to have a short temper when disturbed (e.g., surprised at close distance) and often causes males to be extra curious of any and everything in the area. This could lead to increased negative interactions between bears and humans. There is also extensive literature showing that bears will avoid roads or not cross roads.

While ADOT&PF has proposed extending bridges over the rivers of the flats to allow for bear routes, these routes are based on a study conducted to document bear trails, not on the actual movement of marked bears described in ADF&G's movement study. The problem here is that the bears will be forced to either cross the road or use several small travel corridors under the road, which will likely affect their behavior and movement in the area during an important time (mating season). The Alt. 2B road alignment also crosses several salmon streams (Sawmill Creek, Johnson Creek, Slate Creek), which are used extensively by bears during salmon season. While the roads won't necessarily stop bears from visiting, they will allow increased human

access and thus lead to increased bear disturbance and potential negative interactions.

The proposed road would also open up the area for increased wolverine trapping. ADF&G did not estimate wolverine numbers in the Berners Bay area, instead marking animals to look at movement patterns and space use. Trapping in Berners Bay now relies on use of a skiff to access the outer parts of the bay or an air-boat to get up into the bay; there are only a handful of trappers that ever get up in the bay this way and only 1 or 2 that currently trap there. This road will likely make it much easier to access the area; allowing people to hike or use snow machines on the river flats to get well up the valleys (e.g., the Lace River valley) to set traps. This could increase trapping mortality in this population. How increased mortality like this will affect the population is not known but it would likely lower it in some way. DOT stated that the funds provided for the ADFG study were to allow ADFG to better manage this population if a road was built. But, now that this study is complete, there are no additional funds to allow for additional study to evaluate the population as a road is built. Thus, the burden to manage the increased wolverine harvest is on ADFG with no additional funds.

There is no mention of disturbance to wolverines during avalanche control (via explosives from helicopter). Based on ADFG's study, wolverines use these habitats extensively and could be disturbed during this activity. The DSEIS does acknowledge that mountain goats do use this same avalanche habitat, and while DOT has said it will look for goats before blasting, we are dubious that this measure will be effective, implemented, or at all meaningful.

Many of the concerns about the impact of increased access on bear and wolverine populations are similar for both the Berners Bay moose population and East Lynn Canal mountain goat populations. And while defense of life and property kills are not likely a significant issue for mountain goats, being killed by a vehicle is. The proposed road corridor slices through the heart of mountain goat winter habitat. Crashing into a moose, meanwhile, may kill both the moose and the driver, an issue that Juneau drivers have not had to deal with before.

RESPONSE: The studies conducted by ADF&G were funded by DOT&PF as mitigation to determine population densities and aid ADF&G in harvest analysis, not to determine the road alignment. Section 4.3.13 of the Draft SEIS included Figure 3-21, which illustrated these potential high use areas by brown bears as they relate to project alternatives based on information from the studies. Alternative 2B was modified in several locations to avoid sensitive resources. Between the Lace and Antler Rivers, the alignment was determined by resource agencies input and wetland permitting requirements to avoid wetlands. Wildlife undercrossings are incorporated into the design as discussed in Section 4.3.13 of the Draft SEIS.

Section 4.3.15 of the Final SEIS has been revised to include the pertinent information from the 2004, 2005, and 2014 wildlife technical reports and incorporates recent information on the effects of increased hunting and trapping pressures on wolverines as well as wolverine habitat use and loss as a result of Alternative 2B. As described in Section 4.3.1.3 of the Draft SEIS, hunting and fishing pressure has increased along every highway in Alaska that has opened formerly remote areas. Increases in hunting and fishing would occur along the alignment.

As in other readily accessible regions of the State, ADF&G would monitor the resources along Lynn Canal and adjust fish and game regulations, as necessary, to protect these resources from over utilization. ADF&G would consider management actions to ensure sustainable harvests, including more active monitoring and enforcement duties by State and federal agencies. Furthermore, the effects

of increased hunting and trapping pressure could be controlled by ADF&G and the Board of Game through season duration, take limits, lottery drawings, etc. Description of hunting and trapping pressures relative to brown bear and wolverines are incorporated in Section 4.3.15 of the Final SEIS. In addition, ADF&G confirmed in January 2016 that no additional staff is required to manage additional harvests that may occur as a result of Alternative 2B. The Final SEIS updates Section 4.3.15 to address ADF&G management of several wildlife species due to a new road.

Section 4.3.4.5 of the *2014 Update to Appendix Q – Wildlife Technical Report* addressed the potential impacts to wolverines as result of avalanche maintenance activities. Avalanche control could result in mortality to wolverines because avalanche chutes are preferred habitat for foraging; however, the probability of mortality related to avalanche control for Alternative 2B is likely low due to low wolverine densities in the area. The information has been incorporated into Section 4.3.15.3 of the Final SEIS.

Section 4.3.15.3 of the Draft SEIS included a description of the impacts of vehicular collisions on moose and mountain goat. Due to poor visibility in winter, the proposed highway could create the potential for vehicle collisions. Wildlife crossing signage in areas of high brown bear, moose, and mountain goat use as identified by ADF&G would be incorporated into the road design. Quantitative estimates of collisions were not completed; however, given the population levels and anticipated traffic volumes, mortality from vehicular collisions is not expected to have population level effects.

We acknowledge that ADOT&PF made an effort to site the road so to avoid eagle nests as much as possible. We remain concerns that this population of eagles is more sensitive to disturbance and thus may abandon nests during construction or nesting territories due to increased human use in the area.

RESPONSE: Section 4.8 of the Final SEIS has been revised to incorporate the evaluation of effects to bald eagles during operation and construction from the *2004 Appendix R – Bald Eagle Technical Report* and *2014 Update to Appendix R – Bald Eagle Technical Report*. The evaluation includes an assessment of the potential for bald eagle nest abandonment during construction as well as other potential effects on bald eagle populations from disturbance activities.

Overall, the cost to wildlife will be high both through direct mortality (via hunting and defense of life and property kills) and through disturbance (and thus changing of habits). It is clear, however, that this issue will take increased attention and resources from ADF&G to manage properly.

In addition to the straight up fiscal costs associated with environmental issues, there are also the less tangible but equally important impacts to the quality of life. We also posit that the loss of plentiful fish and game populations, including bear, mountain goat, moose, wolverine, and salmon has a significant impact on the quality of life. While reaching Haines three hours faster may improve the quality of life for some, the loss of a uniquely wild but accessible landscape like Berners Bay will decrease the quality of life for others.

RESPONSE: DOT&PF and FHWA have disclosed the environmental consequences of the proposed alternatives in the Draft and Final SEIS, both beneficial and adverse, including the indirect effects of improved access on wildlife populations. The Draft SEIS did not identify a “loss of plentiful fish and game populations” as a potential impact of Alternative 2B. The Draft SEIS (Section 4.3.15.4) did acknowledge that some wildlife would have been lost to vehicle collisions and some would have been

lost to hunters and trappers because of improved access, and some animals would avoid the area as a result of human presence. Section 4.3.15.4 also states that ADF&G would consider management action to support sustainable harvests.

Loss of wildlife in the area as a result of vehicle collisions, hunting and trapping, or displacement and avoidance, may or may not have been perceived by travelers in the corridor. Making a correlation between wildlife presence and quality and life for highway travelers would be arbitrary. Improved access for hunters and trappers would be perceived as improved quality of life for people with those interests.

While some individuals may currently access Berners Bay by water for its “uniquely wild” landscape, many more may enjoy highway access through this same landscape, if it were provided. The SEIS cannot assess quality of life impacts for differing values placed on access to wildlife. Because the indirect impacts have been disclosed, quantitatively where possible and qualitatively elsewhere, FHWA has met its requirements under NEPA. Commitments to manage, mitigate, or avoid environmental damage are part of the project and its costs, as disclosed in the SEIS.

## **H. Cumulative Effects Analysis Inadequate.**

The summary of cumulative impacts at part 4.9.3.2 of the DSEIS is pretty general. *See* DSEIS at 4-237 to 238. Although the DSEIS notes a road on either the east or west side would result in "improved access," no effort is made to evaluate the effects from the potential mineral development of the numerous state and federal mining claims that such improved access may allow.

**RESPONSE:** The Draft SEIS fully disclosed the effects of reasonably foreseeable mineral development (Section 4.9.1.1). The cumulative effects analysis is based on potential cumulative impacts identified in scoping and on reasonably foreseeable actions that may contribute to cumulative impacts. The Draft SEIS (Section 4.3.1.3) acknowledges that a highway would have provided easier and less expensive access to mineral resources, but access alone does not determine whether a mineral deposit would be developed. FHWA and DOT&PF are not aware of specific mining prospects that would go into development if a road were built, hence the statement “It is unlikely that any mineral deposits within the region would be developed solely because of this improved access.” In this case, anticipating mineral development as a result of highway access would be speculative.

Information related to mining in the project area has been updated in the Final SEIS.

The DSEIS acknowledges that improved access along the West Lynn Canal corridor would increase the likelihood of future exploration but does not disclose how many existing claims there already are along the route or how improved access might affect their development. DSEIS at 4-102.

Interestingly, other than the assertion that Alternative 2B would not have any effect on the operation of the Kensington Gold Mine, *see* DSEIS at 4-47, the DSEIS contains no evaluation of the effect of improved access on development of other mining claims in the Berners Bay area. No effort is taken to evaluate whether improved access might result in development of other, perhaps more marginal claims, existing along the east side of Lynn Canal. Given the numerous state and federal mining claims along both the East and West Lynn corridors, the DSEIS should have taken a harder look at the potential the improved access might result in the development of these mining claims.

RESPONSE: The Draft SEIS did include a figure showing active mining claims in the project area (Figure 3-2) and discussion about reasonably foreseeable future exploration associated with existing claims along the proposed highway corridors (Section 4.9.1.1). As previously stated, anticipating mineral development as a result of highway access would be speculative considering the numerous factors involved in determining economic viability. The roadway alternatives are expected to result in negligible impacts to mine development in the area. Improved access may increase exploration in the area; however, DOT&PF and FHWA cannot speculate how that exploration might lead to development of an active mine. Information related to mining in the project area has been updated in the Final SEIS.

Thank you for your careful attention and response to the serious issues we have raised.

Best Regards,

Buck Lindekugel

Emily Ferry

Juneau Access Improvements Project DSEIS

Attn: Deborah Holman  
DOT&PF Southeast Region  
P.O. Box 112506  
Juneau Alaska 99811-2506  
[juneauaccess@alaska.gov](mailto:juneauaccess@alaska.gov)

Thank you for the opportunity to provide further testimony with regard to the Juneau Access Project. The following are the Skagway Marine Access Commission's comments on the 2014 Juneau Access Improvements Project Draft Supplemental Environmental Impact Statement (DSEIS.) We are submitting our comments via email and the U.S. Postal Service. A copy of a CD with our source documents will be mailed with the hard copy.

The Commission is a non-profit corporation dedicated to improving business conditions in Northern Lynn Canal, promoting safe, reliable and efficient transportation networks and supporting fiscally responsible government projects. We incorporate by reference and ask that Alaska Department of Transportation (AKDOT) review our past testimony as it pertains to this issue which was submitted during the Final Environmental Impact Statement (FEIS) process of 2006 and our Scoping Comments submitted in 2012.

The previous Environmental Impact Statement failed to apply uniform, consistent standardized formulas to the transportation and engineering data used in its cost/benefit analysis of the various alternatives. Despite requests from the public for clarification, many assumptions were made but never substantiated. The Skagway Marine Access Commission believes that the court's decision mandated not only more comprehensive analysis but more accurate and precise application of established principles of economic analysis, transportation planning and engineering assessment.

The National Environmental Policy Act (NEPA) requires that to reach a reasonable decision, an agency must show it considered the right information, and then articulated a satisfactory explanation that rationally connects the facts found and the choices made. An agency violates NEPA if it fails to furnish high quality data to the public that supports its conclusion, fails to adequately evaluate reasonable alternatives or fails to describe and assess the direct, indirect, and cumulative impacts of a proposed

alternative. The Skagway Marine Access Commission submits the following in depth analysis of areas where the DSEIS fails to meet NEPA standards:

- User Cost Skewed Due to Omission of Foot Passenger Data: An analysis of the Juneau Access DSEIS and its failure to consider ferry passengers traveling without vehicles.
- How the Juneau Road Fails to Meet State and Federal Highway Safety Goals: An analysis of safety issues in the Juneau Access DSEIS.
- Inconsistent Methodology For Assigning Ferry Fares: An analysis of selective application of fare structures in the Juneau Access DSEIS.
- Alternative 1B Optimized: A more efficient proposal for enhanced ferry service than Alternative 1B in the Juneau Access DSEIS.
- Alternative 5: The All Alaska Class Ferry Alternative, an improvement on Alternatives 4A-4C in the Juneau Access DSEIS.

The DSEIS contains an abundance of analysis. Unfortunately flawed data and unsubstantiated assumptions render much of it meaningless. Some key components of the project are given only passing consideration or are left out of the study altogether, others are selectively applied. The following are examples of the ways in which the DSEIS appears to attempt to engineer a favorable outcome for the preferred alternative 2B.

RESPONSE: The Alaska Department of Transportation and Public Facilities (DOT&PF) and Federal Highway Administration (FHWA) dispute the assertion that the Draft SEIS relied on flawed data or unsubstantiated assumptions. The analysis contained in the Draft SEIS is based on accepted methodologies and the latest available data, and is in compliance with applicable laws and regulations. All analysis was performed by highly qualified professionals within their respective disciplines. For example, the Draft SEIS adheres to NEPA requirements and guidance governing an SEIS. Additionally, DOT&PF specifically addressed each of the previously raised plaintiff legal challenges, including those not ruled upon by the Courts. Finally, comments herein relating to transportation planning requirements and goals have been addressed in the responses. In general, the commenter incorrectly cites requirements placed on Metropolitan Planning Organizations under the Moving Ahead for Progress in the 21st Century Act (MAP-21) as being directly applicable to this project. Nonetheless, DOT&PF and FHWA meet safety requirements, and have disclosed safety consequences of the project, in the Draft SEIS. DOT&PF and FHWA object to the characterization that the Draft SEIS attempts to “engineer a favorable outcome for the preferred alternative 2B.” Each of the commenter’s points is answered in turn, below.

## SAFETY

Over a decade in the different towns where hearings have been held, the chorus of public testimony on the safety issue has been deafening. Yet sadly, safety still has not been included in the purpose and need statement for the project.\* Because safety is not included in purpose and need, it is not one of the criteria considered in the choice of a preferred alternative, which is a major oversight given the numerous hazards along the proposed road routes.

\*The Skagway Marine Access Commission requested that safety and reliability be included in the statement of purpose and need in comments on the FEIS in 2006 and again in scoping comments in 2012.

RESPONSE: Safety is included in the purpose and need statement for a project only if there is a demonstrable safety problem on the transportation link being considered. An example would be a link in which the number of accidents is higher than the state average for similar transportation links. Safety is not a problem with the current system; therefore, safety is not a stated purpose and need factor for the proposed project. Nonetheless, all roads constructed under State and federal authority must follow State and federal design procedures that have been adopted/established to support safe travel. Therefore, all evaluated project alternatives will be developed to be safe and reliable in accordance with standards.

#### FOOT PASSENGERS

Nearly 45% of passengers on the Alaska Marine Highway System (AMHS) travel without a vehicle yet the document ignores their existence as an element in both traffic forecasts and user cost analysis.

RESPONSE: The document does not ignore passengers traveling without a vehicle; all people wanting to travel from Juneau to Haines and from Juneau to Skagway are included in the traffic forecasts. What the commenter is misunderstanding (or objecting to) is that there is a fundamental difference in how people will travel in the primarily road alternatives (Alternatives 2B and 3) as compared to the primarily ferry alternatives (Alternatives 1, 1B, 4A, 4B, 4C, and 4D).

The primarily ferry alternatives operate more like a public transit system, such that the ferry leg is long, and comprises a large proportion of the trip. For those alternatives, the public transportation mode (ferry) transports people and vehicles, dropping them off relatively close to their destination. This makes it more conducive to walk onto the ferry, as does the fact that the ferry trip is highly subsidized and is seen as a good deal. Of note, however, is that even for the primarily ferry alternatives, the trip typically includes a short vehicle component at each end (Skagway has the only ferry terminal in Lynn Canal that is within reasonable walking distance from residential areas for most residents. All other existing terminals must be reached by private vehicle or private carrier; therefore, a vehicle is typically used for at least part of the trip).

For the primarily road alternatives, a greater proportion of the trip would be made in a vehicle than on public transportation (shuttle ferry). Because of the distances to reach the ferry terminals, particularly at Katzechin, these alternatives would be less conducive to passengers walking onto the ferry (e.g., friends or a cab would be needed to drive someone to Katzechin to catch the shuttle ferry). This would be a change in travel patterns and would also be an impact. For some travelers, this is an adverse impact, and for others it is considered a beneficial impact. Both the beneficial and adverse impacts to walk-on passengers are identified and disclosed in the SEIS. The total amount of demand in the corridor (both walk-on passengers and vehicles) is captured and represented in the forecasts. As is discussed in the SEIS, DOT&PF and FHWA anticipate that with the primarily road alternatives, most of the travel will be via vehicle (i.e., not walk-on), and those travelers who were accustomed to making their trip as walk-on passengers will use a

vehicle. The implications of this change are fully disclosed in the SEIS. Of note is that DOT&PF and FHWA have updated the calculation of current walk-on traffic; it is closer to 30 percent. Additional information on the forecast of walk-on traffic has been included in the *Traffic Forecast Report* (Revised Appendix AA), and the impact analysis has been updated in the Final SEIS and *Socioeconomic Effects Technical Report* (Revised Appendix EE) to reflect more current estimates under the impacts analysis associated with each alternative.

#### TICKET PRICES

Favorable fares are selectively applied to benefit the preferred alternative thereby skewing the analyses of user benefit, demand and subsidy identification. The methodology for assigning fares is never explained. A study of AMHS fare inequities has been ongoing concurrent with development of DSEIS alternatives and is scheduled for release shortly after the close of the comment period. Upon its release (presumably with its legislatively mandated fare increases) the study immediately will render the traffic demand and cost-benefit analysis out of date. Despite requests to include the AMHS study in the DSEIS the AKDOT has not made the study public. \*\*

\*\* See letters from Municipality of Skagway to FHWA dated 9-06-13; 3-25-14; 7-28-14; 10-03-14 and letters from FHWA to the Municipality dated 10-10-13 and 8-20-2014

RESPONSE: “Favorable fares” were not applied to Alternative 2B, nor was the analysis “skewed” in its favor. Again, the commenter ignores that the differences between the alternatives that are primarily ferry options, and those that are primarily road options, include substantive changes in the operating costs of the vessels and therefore in the fare structure. For the primarily road alternatives, the ferry service would operate as a shuttle ferry and would have reduced operating costs. The fares are lower due to the efficiencies generated from day boat vessels operating without the need for a supporting reservation system, operating with drive through loading and unloading, as well as higher traffic volumes generated by frequent, regularly scheduled service. Per your comment, a memo describing the methodology for developing the fares has been added to Revised Appendix AA of the Final SEIS.

The AMHS Tariff Analysis was not completed until January 2015, after the Draft SEIS was published. It was made publicly available on the AMHS website at that time. The study examined AMHS tariff rates and tariff rates for similar ferry systems, as well as changes in fares made since the previous rate study was completed in 2008. It also looked for anomalies on routes of similar length within the AMHS system. The study did not identify any fare anomalies on the Juneau-Skagway or Juneau-Haines routes. The study also considered the development and implementation of a change in tariff policy with the goal of creating a fair and equitable tariff structure. As of January 2018, DOT&PF has not acted on the study recommendations regarding revising the fair structure methodology. As a study, the tariff analysis results did not render the Draft SEIS results out-of-date. DOT&PF and FHWA have reviewed the study and concluded that the analysis and recommendations do not impact the methodology used for the SEIS.

## MARINE MODELING

The court mandated a more efficient “no build alternative” but the model put forth as the “enhanced” marine alternative 1B is burdened unnecessarily by assigning the largest, most expensive ship to operate on the route with the least demand.

RESPONSE: A review of the AMHS fleet indicates that the vessel best positioned (availability, functionality) to enhance service in Lynn Canal is the motor vessel (*M/V Malaspina*). The *M/V Malaspina*'s primary service link is Auke Bay to Skagway due to the Skagway Ferry Terminal configuration. The existing Skagway Ferry Terminal configuration cannot accommodate bow loading and unloading. Without the ability for vehicles to drive onto the ACF at one end and drive straight off the other end, it is not reasonable to schedule a 12 hours per day, 7 days per week Day Boat ACF on the Auke Bay to Skagway link. Without taking advantage of the drive through loading and unloading vessel capability, there is insufficient time to make the round trip within 12 hours. In addition, there is flexibility in the scheduling of the *M/V Malaspina*. The Alternative 1B presented in the Final SEIS demonstrates the potential of flexibility.

Many of the technical reports are plagued with inconsistent methodologies with regard to fare structure, route cost modeling and route segment distance.

RESPONSE: Cost calculations for mainliner operations and day boat operations require separate methods because they are two different types of systems. The day boats are dedicated to Juneau Access Improvements (JAI) Project alternatives and can be thought of as stand-alone systems. The mainline vessels (operating part time in Lynn Canal) are tied to a much larger system, and operate on schedules not necessarily optimized for Lynn Canal traffic. To calculate the dedicated day boat operating costs, cost estimate models were created that estimated annual vessel cost components, including crew cost, fuel cost, maintenance cost, vessel lay-up cost, and administrative overhead costs (see Chapter 5 of the *Marine Segments Technical Report*, Revised Appendix GG). For the mainliner cost analysis, the cost component categories are non-fuel operating expenditures, fuel expenditures, shoreside costs, and overhaul costs. AMHS provided the annual total cost (see Chapter 6 of Revised Appendix GG).

See the previous response regarding fare structure.

## COST-BENEFIT ANALYSIS

Appendix FF presents a thorough and credible analysis which concludes that building the road makes no economic sense. But the results of the study are ignored (much like the foot passengers) in the choice of a preferred alternative and buried in the nearly 1500 pages of document and technical reports.

RESPONSE: The results of Appendix FF, *User Benefit, Life-cycle Cost, and Total Project Life Cost Analyses*, have not been “ignored.” The purpose of the economic efficiency and cost-effectiveness analysis conducted as part of the Draft SEIS was to determine which alternatives serve the largest number of travelers at the lowest possible cost. Many measurements are important in the identification of a preferred alternative. For example, the total number of travelers served is important. Alternative 2B would serve substantially more travelers than any other alternative (9.6

million vehicles versus 1.4 to 3.4 million vehicles for the marine alternatives). The cost to serve each traveler is another important measurement (Alternative 2B is lowest in terms of per user cost).

#### SPECULATIVE DEMAND

Alternative 2B poses significant financial risk based on a model of theoretical demand. Appendix AA, the Traffic Forecast Report uses an “unconstrained demand” model. It predicts greatly inflated numbers in an “if we build it they will come” strategy, a risky game plan for gambling with more than a half a billion of the state’s dwindling transportation dollars.

RESPONSE: All traffic demand models attempt to predict future demand based on assumptions and data available in the present. To the extent that they are predicting a future, unknown condition, all demand models are “theoretical.” The total demand model used for this project was developed based on empirical data derived from actual travel conditions observed in Alaska and Western Canada from communities with geographic characteristics similar to those in Juneau. The model begins by defining a condition that the modelers call “unconstrained demand.” This level of demand predicts how many people would want to travel between Juneau and Haines/Skagway if there were a road the entire way. This predictive condition was based on the assumption that, if given the opportunity to travel by road, people in Juneau, Haines, and Skagway would exhibit travel patterns similar to the patterns of people in similarly situated communities. Based on the project team’s research, there are no indicators that travel behavior in Juneau, Skagway, and Haines would differ substantially from that of behavior in other Alaskan and Canadian communities if full highway access were available. Based on the data collected, the project team is confident that Juneau residents would travel in a manner similar to that of other Alaska residents. Even today, Juneau residents travel only slightly less on a per-household basis than the average Alaskan household, even though they do not have full road access. Vehicle ownership per capita in Juneau, Haines, and Skagway is also comparable to vehicle ownership per capita in other Alaska areas.

The predictive methodology used in this project’s forecast is not “risky” or based on a strategy of “build it and they will come,” and does not result in “greatly inflated numbers.” The forecast used the unconstrained demand only as an upper boundary to bracket the overall demand in the corridor. Each forecast, for each of the alternatives, scales down from the unconstrained demand based on factors such as cost, travel time, and schedule convenience. Using such factors to predict travelers’ choices and behavior among alternatives is a common modeling practice and is used in nearly every traffic model. By factoring the demand down from the unconstrained demand based on costs, travel time, and convenience, the model predicts reasonable estimates of travel behavior based on the relative merits of the alternatives.

Moreover, more than one approach to predicting future travel behavior was used by the study team. Two methods were selected as being most representative of likely conditions along Lynn Canal. Each of these two different models was developed independently and resulted in similar estimates of travel volume along Lynn Canal. These approaches were developed by travel modelers at Fehr & Peers, a firm specifically identified and hired for its expertise in the travel modeling field. The Fehr & Peers approach and results were evaluated by an independent

university professor with expertise in travel modeling and travel behavior, prior to the results being accepted for use in the SEIS. The methodology and results of both approaches are fully disclosed in the associated technical report and summarized in the SEIS.

#### JUNEAU-CENTRIC

The plan is named Juneau Access Improvements Project (JAIP) and in this sense it is Juneau-centric in its conception and its execution. It is all about Juneau all the time. The emphasis is on improving access from Juneau to Haines and Juneau to Skagway. There is very little written in the document about the vital transportation links that exist between Haines and Skagway or between Juneau and points south. The DSEIS treats the rest of the region as an afterthought and gives no consideration to effects on the remainder of the Alaska Marine Highway System.

**RESPONSE:** Based on the information in Chapter 1 describing the problems to be solved, the purpose of the project is to provide improved surface transportation to and from Juneau within the Lynn Canal corridor. In that sense, the commenter is correct—the project is about access to and from Juneau. This SEIS is a project-level evaluation focused on solving identified problems of access to and from Juneau in the Lynn Canal corridor; the intent is not to plan for and evaluate the overall needs of the AMHS. Overall transportation needs are evaluated in the Southeast Alaska Transportation Plan.

Nevertheless the project considers effects on the remainder of the Alaska Marine Highway System. To the extent that there are impacts that extend beyond the Lynn Canal project area, those impacts are discussed as indirect or cumulative impacts in the SEIS. Moreover, DOT&PF does include and evaluate access between Haines and Skagway in the SEIS. In each of the project alternatives (see Chapter 2), access between Haines and Skagway is maintained, and that planned connection is integral to each of the project alternatives evaluated in the SEIS.

#### STATE SUBSIDY

In their 2012 scoping comments the Skagway Marine Access Commission raised the issue of state subsidy. “Traffic studies to date demonstrate that a preponderance of AMHS traffic occurs in Lynn Canal. With its inflated pricing and its large traffic volume, Lynn Canal makes a disproportionately large financial contribution to the overall AMHS system as compared to the rest of the region. An issue of concern with regard to the goal of reducing State costs (reference purpose and need) would be possible impacts that the loss of Lynn Canal revenues would have on the rest of the system, either in the form of increased tariffs for users in other communities in Southeast or increased level of required government subsidy.” This issue was raised in the lawsuit over the previous FEIS. It is not addressed in the current DSEIS.

**RESPONSE:** There is a misconception in the region that the Lynn Canal Service covers its costs and generates excess revenue that helps subsidize other less-profitable runs in the system. While traffic and revenue studies indicate higher demand in Lynn Canal, and therefore higher revenues, the current ferry system in Lynn Canal still requires a State subsidy. For the time period 2001 through 2015, providing Lynn Canal service was 12.6 percent of AMHS total cost generating 12.7

percent of AMHS total revenue. More recently (2013-2015) Lynn Canal service was 13 percent of AMHS total cost generating 10.3 percent of AMHS total revenue.

It is not true that this issue is not addressed in the SEIS. Section 1.4.4 of the Final SEIS describes the costs, revenues, and subsidies necessary to run the AMHS system in general, and Lynn Canal service in particular. Over fiscal years 2001 through 2015, the cost to operate AMHS in Lynn Canal averaged \$16.6 million per year. Revenues from fiscal years 2001 through 2015 from passenger and vehicle tickets and on-ship services averaged \$6.1 million. As a result, the State general fund contribution has averaged \$10.5 million to provide surface transportation in Lynn Canal. The estimated revenues, costs, and AMHS/State costs are reported for each for the alternatives. See, in particular, tables in Chapter 4 of the Draft and Final SEISs. Also, see text under the "Transportation" headings for each alternative, under subheadings "Other Transportation Impacts," and AMHS. Finally, in addition to the above-mentioned information, an update (2005-2015) to the *Lynn Canal Corridor Revenues and Expenditures* reports for 2001-2002 and 2003-2004 is included in Appendix BB of the Final SEIS. This report has great detail on revenues, costs, and subsidies.

The *2015 Alaska Marine Highway Tariff Analysis* identified rate anomalies on comparable routes within the AMHS system. AMHS is on a 5-year schedule, following through with the recommendation to bring outlying tariffs to within 25 percent of the average tariff per nautical mile for the route distance. The Tariff study identified the link between Haines and Skagway as too high relative to other links of similar distance and is addressing this as part of the 5 year plan.

Under Federal law, the burden rests with the Federal Highway Administration (FHWA) to ensure that state transportation agencies adhere to federal law and regulations. It is the responsibility of FHWA to require that AKDOT furnish high quality data that supports its conclusions. The omissions and faulty analyses in this document should be corrected and the public should be given an opportunity to comment on the corrected version. Over the past decade there has been a tendency on the part of the Alaska Division of FHWA to rubber stamp any and all decisions made by the AKDOT with regard to Juneau Access. For the Federal Agency to sign off on another substandard environmental impact statement would be highly suspect and raise the question as to whether the closeness of the two agencies bounds on a form of government failure known as regulatory capture.

**RESPONSE:** The Draft and Final SEIS conclusions are based on up-to-date high-quality data and analyses. Corrections, where necessary, have been made in the Final SEIS. The procedures followed by FHWA and DOT&PF are completely within the regulatory framework of NEPA and the Administrative Procedure Act.

The Skagway Marine Access Commission requests that AKDOT address the inadequacies of the DSEIS and provide the public an opportunity to comment on the corrected document. The Commission concurs with the comments of the Municipality of Skagway.

Sincerely,

Janice C. Wrentmore, President Skagway Marine Access Commission

## **Dr. Lindsey Doctorman’s Comments in Regards to Appendix EE: Socioeconomic Effects Technical Report from July 2014.**

This appendix is an update from the 2004 Appendix H: Socioeconomic Effects Technical Report. I would like to reiterate my concerns with the previous document here as they did not do an updated survey or if they did it was not reported here:

- The socioeconomic impacts are out of date and not fully captured. The household survey data that is the basis for the socioeconomic effects in Appendices H and I are from nearly 20 years ago. For example, Appendix H, page 52 states “The 1994 Juneau Access Household Survey found that Skagway households spent an average of \$1,600 in retail purchases, including \$1,100 in groceries, the previous year.” These results are archaic as the internet was not a major economic force as it is today. The high frequency of use of online shopping is not taken into account in this survey nor in the survey conducted 10 years later, but the impacts still claim shopping trips as one of the main uses by residents. In addition, the survey conducted in 2003 asks the residents about their preferences of three potential access options, one of which is no longer viable under this project, and it does not ask about the preferred alternative. Lastly, recreation and summer travel are other stated uses for Juneau Access, however, the survey does not ask the tourists nor the non- car travelers their patterns or preferences on travel under these scenarios. These groups are a major portion of travelers, especially in the summer. You are doing a disservice to the citizens of this State by making decisions on such partial and outdated information.

RESPONSE: The results of the 2003 household survey were provided as background information. These results were not used in developing the travel model for the Draft and Final SEISs, nor was the household survey used as the basis for determining the socioeconomic effects. As part of the preparation of the Draft SEIS, all socioeconomic baseline data and impacts were reviewed and updated where appropriate. As evidence, Appendix EE of the Draft SEIS, *Socioeconomic Effects Technical Report*, is a revised assessment of the 2004 *Socioeconomic Effects Technical Report*, which documented the potential socioeconomic effects of improved access to Juneau. It includes detailed socioeconomic baseline data for Juneau, Haines, and Skagway. This report was updated for the SEIS based on the latest census information, comprehensive plans, and other relevant socioeconomic information.

The updated appendix, Appendix EE, does not provide updated survey data in this way. In fact the methodology used is very vague. It states that they interviewed the public, business owners and government officials. It does not point out what questions were asked and in what platform they were asked. The lack of description of the methodology used in this report does not make this report reliable in any form. They did use Northern Economics for some of their data collection. The majority of this appendix was information gleaned from the Census Bureau.

RESPONSE: The commenter seems to be objecting to the use of survey data that were relied upon in the 2006 Final EIS. At that time, a household survey was used to provide information for the traffic forecast. In the 2014 Draft SEIS, a different methodology was used to forecast traffic. As a result, no new surveys were conducted for the Draft and Final SEISs, because they were not needed.

That is not to say that socioeconomic baseline data and effects were not updated. As mentioned above, all socioeconomic baseline data and impacts were reviewed and updated where appropriate in preparation of the Draft SEIS and its Appendix EE, *Socioeconomic Effects Technical Report*. Appendix EE of the Draft SEIS is a revised assessment of the 2004 *Socioeconomic Effects Technical Report* documenting the potential socioeconomic effects of improved access to Juneau. It includes detailed socioeconomic baseline data for Juneau, Haines, and Skagway. This report was updated based on the latest census information, comprehensive plans, and other relevant socioeconomic information.

The commenter seems to be confusing the interviews conducted for the purpose of updating socioeconomic data, with the more formal household survey method undertaken in 2004. It is true that in 2004 the formal survey had a more detailed methodology. Nonetheless, Section 1.2 of the 2014 *Socioeconomics Effects Technical Report* (Appendix EE of the Draft SEIS) describes the methodology used to conduct the interviews. It states that “Primary research includes interviews with Juneau, Haines, and Skagway businesses, government, and other community representatives. In addition, executive interviews were conducted with State and local government agencies throughout the research process in order to gather data and assess the effects of the various transportation alternatives.” Moreover, in sections in which direct interviews are cited, additional information is presented regarding what type of information was requested and gleaned from the interviews. Interview materials are cited in the reference list and are a part of the administrative record for the project.

I did examine their *ES 1 Effects Common to All Alternatives*, where they broke out the overall effects on different aspects of the communities which I will summarize here. But first, it should be noted that they estimate between 90 annual average daily traffic (ADT) in the no action alternative and 835 ADT for the other alternatives. I fail to believe that this road would increase traffic 10-fold, especially with the claims that they back below:

RESPONSE: The traffic forecast methodology and results are fully disclosed in Appendix AA, *Traffic Forecast Report*, and are summarized in the SEIS. The study team selected two forecasting methods as being most representative of likely conditions along Lynn Canal. Each of these two different models was developed independently and resulted in similar estimates of travel volume along Lynn Canal. These approaches were developed by travel modelers at Fehr & Peers, a firm specifically identified and hired for its expertise in the travel modeling field. The Fehr & Peers approach and results were evaluated by an independent university professor with expertise in travel modeling and travel behavior, prior to the results being accepted for use in the SEIS.

The ten-fold increase in traffic from the No Action Alternative to Alternative 2B would be the result of lower-cost, more convenient travel opportunities for a much larger segment of the region's population.

**Transportation:** The report claims to improve access in the Lynn Canal by creating closer links among the economies, more retail / service access for Haines and Skagway residents and more access to recreation for Juneau residents.

**Air taxi operations:** The report claims that improved access to the Lynn Canal is likely to have a negative impact on air taxi operators. This contradicts the previous claim in transportation that this improved access will create a closer link to the communities. A 45 minute plane ride is as close as you can be connected to a community in Southeast Alaska.

RESPONSE: A statement that improved surface transportation in Lynn Canal would reduce business for air taxi operators does not contradict a statement that improved surface transportation would improve linkages for the affected communities. An important aspect of the SEIS is to describe both beneficial impacts and adverse impacts. As in the analysis cited above by the commenter, it is possible to have an overall benefit to travelers in general, while also having an adverse effect to one transportation industry—in this case air taxi operators. As is explained in Section 4.4.7.5 of the Draft SEIS, construction of any of the build alternatives would divert some traffic from air taxis to the improved Lynn Canal surface transportation. The improved access in Lynn Canal would facilitate the movement of goods and people through and to the northern Southeast Alaska region. This would create closer social, cultural, and economic links among the communities of Juneau, Haines, Skagway, and Whitehorse. However, air taxi operators could see reduced activity and business.

**Economic development:** The report continues to claim this is improved access. The access will benefit Haines community for retirement opportunities. I thought the claim for this Juneau Access project was to increase jobs? It is just expanding retirement opportunities, so where are the jobs?

RESPONSE: The purpose of the JAI Project is not to “increase jobs” (see Chapter 1 for a full description of the project purpose and need). However, as presented in Section 4.8.4 of the Draft SEIS, all of the project alternatives would create construction jobs, and Alternatives 2B and 3 would create the most jobs. All of the project alternatives except Alternatives 4A and 4C are projected to increase employment in Juneau (Section 4.8.4.3 of the Draft SEIS), and, depending on the alternative, Haines and/or Skagway, primarily as a result of increased visitors (see Sections 4.3.5, 4.4.5, and 4.5.5 of the Draft SEIS). This increased employment would result in increased population.

**Local government expenditure:** The report claims with this improved access that there will be an increased demand for public services (i.e. a great cost to local governments), but it will be offset by higher property tax revenues (i.e. a greater cost to the local residents). Not sure where this is benefiting anyone.

RESPONSE: The Draft SEIS discloses impacts on local government. It does not claim that this is a benefit. Benefits are derived by travelers who would use the project alternatives; those benefits would come in the form of lower costs, increased flexibility and opportunities to travel, and shorter travel times. See Appendix EE, *Socioeconomic Technical Report*, for more detailed information on impacts to local government expenditures. Appendix EE estimates the amount of additional sales tax revenue that could be generated by each alternative, but other expenditures are not quantified (they are described qualitatively).

**Healthcare:** The report claims that this ‘improved access’ would make it “somewhat easier and faster to transport patients” In emergency situations, helicopters or planes are utilized, so a road would provide no additional benefit in those situations.

RESPONSE: Implementation of any of the project’s build alternatives would improve access to the communities in Lynn Canal; therefore, all the alternatives would improve access to health care facilities. The Draft SEIS acknowledges that air transport for medical emergencies would remain the method of choice.

**Education:** This report claims that improved access by ferry or highway benefits educational programs. If it states that it does not matter which mode of transportation is used, then there is no need to build a road.

RESPONSE: The purpose and need for the project is not directly tied to education. Implementation of any of build alternatives would improve access to the communities in Lynn Canal, and therefore would improve access to and from Lynn Canal’s educational facilities (among other destinations and users who would benefit).

**Public Safety:** The report directly quotes *“As with any rural Alaska road system, emergency situations occurring far from downtown areas would create response challenges for fire, emergency medical service, and police departments. Personnel and equipment would be pulled away from normal duties, possibly for extended periods. The agencies with the most resources available – State Troopers, Juneau Police Department, and Juneau Fire Department – say they are already operating at minimal staffing levels given the extent of their current responsibilities and service areas.”*

This road alternative is NOT SAFE and the safety officers are NOT available for unsafe situations. This report states this fact!

RESPONSE: The quote pulled from the Draft SEIS does not indicate that the road alternative is not safe. The Draft SEIS discloses effects on local communities, and in this particular instance it describes the effects to local emergency service providers. The Draft SEIS and the *Socioeconomic Effects Technical Report* (Appendix EE) include a public safety analysis for each project alternative.

Statewide, the Alaska State Troopers are responsible for general policing, patrols, and emergency response along rural roads, particularly outside the areas associated with individual local governments. Alternative 2B falls partially in the City and Borough of Juneau (about 30 road

miles north of Echo Cove to Eldred Rock) and partially in the Haines Borough (from Eldred Rock northward). The Alaska State Troopers were contacted and indicated that, under Alternative 2B, the primary response would come from State Troopers based in Juneau. The Alternative 3 road on the west side of Lynn Canal lies within the Haines Borough. Under Alternative 3, the primary response would come from State Troopers based in Haines<sup>1</sup>.

The SEIS indicates that it is likely that emergency medical response would come from these communities. Section 3.1.4 and sections in Chapter 4 corresponding to the socioeconomic impacts for each alternative provide basic information about services provided at each community and disclose the potential impacts to the service providers of having more road miles and more traffic within their areas of responsibility (see also Appendix EE, Section 3.3). Fire protection outside local fire service areas (i.e., along these road routes) is provided by the Alaska Division of Forestry and Tongass National Forest. Haines, Skagway, and Juneau all have search and rescue capabilities, either through separate organizations or through their fire/rescue departments, or both. Overall, staffing of public safety is anticipated to remain the same as it is today under all alternatives.

All roads constructed under State and federal authority must follow State and federal design procedures that have been adopted/established to support safe travel. Therefore, all of the evaluated project alternatives would be developed to be safe and reliable in accordance with standards.

**Quality of Life:** The report claims that how this access affects quality of life is a personal perspective. The report references a survey conducted in 2003, and claims that residents in all three communities would, at some level, prefer improved access or find it important. The survey results stated did not define whether that improved access be in the form of a road or more ferry access.

In the second chapter of this report, the baseline conditions are set out. On page 11, in regards to section **2.1.1.3 Population Forecast**. The highly subjective statement eludes to the report writers preference as to how revenue should be raised in the State of Alaska. The direct quote is:

***“There is considerable uncertainty in forecasting Juneau’s population because it is not possible to predict when or how State government will choose to deal with continuing revenue shortfalls. The opening of the Arctic National Wildlife Reserve to oil drilling or the construction of an Alaskan route for a natural gas pipeline could temporarily mitigate some of the budget deficit. Implementation of some new tax structure could also ensure that State programs will continue uninterrupted.”***

This statement alone shows that they are not approaching the Juneau Access objective and unbiased. The report directly claims that they are not able to properly provide for the safety of the public in remote areas and there are clear preferences as to how the politics in this State should

---

<sup>1</sup> As of January 2018, the Alaska State Trooper position in Haines is vacant.

be directed. These are two important reasons why this study is not objective and why these alternatives are not safe for the citizens of Southeast Alaska. The main goal for improved access or a change in the current transportation system is to improve safety and that is not what would occur if a road were to be built.

RESPONSE: FHWA and DOT&PF have undertaken the SEIS for the JAI Project in an objective and unbiased manner. The quote pulled from Appendix EE, *Socioeconomic Technical Report* (Section 2.1.1.3), of the Draft SEIS does not describe a “bias” or “elude [*sic*] to the report writers preference as to how revenue should be raised...” The sentence merely describes the challenge in forecasting Juneau’s population, given the current difficult budget situation. The sentence quoted is not stating a preference, but rather reporting the kinds of remedies that have been discussed to stem the budget shortfall for funding State government. In Alaska, there is a strong connection between economic activity and population. Because Juneau’s economic activity is heavily tied to State government, the Draft SEIS acknowledged the potential for certain issues to result in substantial changes to the city’s population. The population forecast used in the Draft SEIS for the project was founded on a base case population developed by the Alaska Department of Labor and Workforce Development. It was completed by Northern Economics, a firm that is eminently qualified in Alaska for conducting such a forecast. The forecast showed flat to declining population in Southeast Alaska. If the project were trying to bias the results, it would not make sense to identify a flat to declining population. The forecast was updated in the Final SEIS based on a 2016 population projection also done by the Department of Labor and Workforce Development (see Appendix B of Appendix AA, *Traffic Forecast Report*).

The report does not claim we will “not able to properly provide for the safety of the public in remote areas.” As mentioned previously, the Draft SEIS discloses effects on local communities and describes the effects to local emergency service providers. DOT&PF and FHWA acknowledge that project alternatives would have an impact on emergency service providers; however, as has occurred across the state on other stretches of rural highway, emergency service providers respond and provide proper assistance. The Draft SEIS discloses that this would come with a financial cost to the providers.

All roads constructed under State and federal authority must follow State and federal design procedures that have been adopted/established to support safe travel. Therefore, all of the project alternatives are safe and reliable.

**Inconsistent Methodology for Assigning Ferry Fares: An analysis of skewed ticket prices selectively applied in the Juneau Access DSEIS**

**November 20, 2014**

*Skagway Marine Access Commission  
Box 1076  
Skagway, Alaska 99840*

## Inconsistent methodology identified

Early on in the Juneau Access environmental impact statement process, the Alaska Department of Transportation and Public Facilities (AKDOT) identified the lack of a consistent methodology for calculating the fares under the present Alaska Marine Highway System (AMHS) fare structure. The lack of a consistent fare formula has been documented not only in earlier drafts of the EIS and supporting documents, but in official governmental reports, correspondence and public testimony by AMHS and AKDOT officials. <sup>(1-5)</sup>

In an August 2005 update to the March 2004 Proposed Marine Segments Fare Structures Report,<sup>(6)</sup> the AKDOT proposed a cost per mile fare formula that has been applied to some but not all route alternatives presented in the 2014 DSEIS. We are concerned that the algorithm proposed in the report has been selectively applied to the advantage of the preferred alternative, 2B.

An August 30, 2012 memo from consultant Laura Cummings of HDR references the 2005 fare memo. It also documents HDR's methodology for developing the 2014 pricing for DSEIS marine alternatives as being "revised" based on comments provided by Reuben Yost on August 17 and 24, 2012. <sup>(7&8)</sup> The memo summarizes Yost's instructions on how to structure the ferry fares on a variety of alternatives. Although this HDR Ferry Fares Memo is referenced on the cover page for Appendix A of the Traffic Forecast Report (Appendix AA) of the 2014 DSEIS, it has not been included in the Traffic Forecast Report either on the DSEIS website or on paper. Upon a specific request I was told by Gary Hogins that the index page was a mistake and the Ferry Fares Memo did not exist. A few days later I received an email from him saying that the Ferry Fares Memo did in fact exist and he provided me with a copy. <sup>(9&10)</sup>

This memo is the only supporting documentation for the methodology used to establish the AMHS fares for ferry links proposed in the 2014 DSEIS.

**RESPONSE:** As you report, Appendix AA cited an "HDR Ferry Fares Memo" as an attachment. The cover page indicating that this memo was to be an attachment was in error. The memo in question was not intended to be published. Rather, it is an internal HDR record of a telephone meeting between the DOT&PF project manager and HDR staff. The intention of the memo, written by a junior HDR staff member, was to provide internal communication to other project team members on the direction provided. Thus, when the commenter called to request it, at first neither HDR nor DOT&PF were aware to what memo the commenter was referring – and hence the original response that such a memo "did not exist." When the internal HDR telephone record was identified as the memo of reference, it was transmitted – to provide full disclosure.

The memo documents the approach used to update the fares to 2012 values. The recommendation by Mr. Yost was, in brief, to keep the same (2004) methodology for the fares but to update them to reflect actual 2012 AMHS fares. As such, the fares calculated for the Draft SEIS were prepared based on the 2004 report.

The algorithm used in the report was not selectively applied to the advantage of Alternative 2B. Rather, the fares are calculated differently for long-haul ferry runs relative to the shuttle ferry runs. The Alternative 2B and 3 fares are lower due to the efficiencies generated from vessels designed and operated as day boats; the ability of the day boats to operate with drive through

loading and unloading; and the higher traffic volumes generated by frequent, regularly scheduled service and no costs for reservations. These cost efficiencies in day boat operations are transferred to the fares. Per the comment, additional information describing the development of the fares has been added to Appendix A of Revised Appendix AA, *Traffic Forecast Report*, in the Final SEIS.

In accordance with Yost's instructions, the formula developed in the 2005 report is applied ONLY to pricing of marine segments for the East Side Road and the West Side Road alternatives. ALL other alternatives are burdened with existing AMHS rates which are considerably higher when analyzed on a cost per mile formula. (The exception to this rule in the DSEIS is Alternative 1B which arbitrarily reduces fares by 20%)

The fare is an important coefficient in any meaningful analysis of the EIS. An inequitable and arbitrary fare structure reverberates through the development of all alternatives, and the resulting analyses of user benefit, demand and subsidy identification. Without knowing the formula by which AKDOT set fares on different routes, it is impossible to review and evaluate the wide variety of alternatives presented in the 2014 DSEIS. NEPA requires that agencies furnish high quality data to the public that supports its conclusion. AKDOT has failed to do this.

**RESPONSE:** Alternative 1B does not arbitrarily reduce fares by 20 percent. The lawsuit by plaintiffs regarding the 2006 FEIS suggested that reducing fares should be a part of the consideration for an alternative using only existing assets. It was argued that reducing fares would increase ridership and provide Alternative 1B a better chance at satisfying the purpose and need. Appendix CC, *Development of Alternative 1B – Enhanced Service with Existing Alaska Marine Highway System (AMHS) Assets*, describes the methodology and results of a fare sensitivity analysis used to determine that a 20 percent reduction in fares would be reasonable given the potential effect on ridership and revenue. The analysis and decision to reduce fares was not arbitrary.

### **Favorable ticket pricing applied to Alternative 2B**

The DSEIS includes two approaches for fare pricing and mixes and matches between those two approaches to create a favorable outcome for Alternative 2B. Both approaches are discussed in the 2012 Ferry Fares Memo which in turn references the 2005 update to the 2004 Marine Segments Fare Structures Report.

Approach 1: Per mile algorithms for Shuttles (routes less than 20 miles runs) and for Dayboats (routes greater than 20 miles).

Approach 2: Existing AMHS pricing used as a basis for prorating a per mile cost.

In the development of the 2014 DSEIS, Approach 1 was selectively implemented to exclusively benefit the short runs included in Alternative 2B (East Lynn Canal Road) and Alternative 3 (West Lynn Canal Road.) Approach 2 was applied to all other alternatives.

In the Cummings memo, at Yost's direction, the favorable per mile pricing algorithm created in 2005 was applied only to shuttle routes under 20 miles which benefited Alternative 2B with its short runs from

Skagway to Katzehin, Haines to Katzehin, and Skagway to Haines. ALL other routes in ALL other alternatives (with the exception of the West Lynn Canal Road) are burdened with existing AMHS rates.

<b>Routes less than 20 miles (Shuttles)</b>	<b>2014 DSEIS Pricing (algorithm applied)</b>	<b>2005 Dayboat algorithm adjusted for price increases</b>	<b>2014 AMHS fare structure</b>	
Skagway/Haines 15 miles	\$22.00/vehicle 7.50 pax	\$22.00/vehicle \$7.50/pax	\$49.00/vehicle \$31.00/pax	
Skagway/Katzehin 16 miles	\$24.00/vehicle 8.00/pax	\$24.00/vehicle 8.00/pax	\$52.00/vehicle \$33.00/pa	
<b>Routes greater than 20 miles (Dayboats)</b>	<b>(algorithm not applied)</b>			
Skagway/Berners Bay 60 miles	\$72.00/vehicle \$32.00/pax	\$52.00/vehicle \$23.00/pax	\$72.00/vehicle \$32.00/pa	
Skagway/Auke Bay 93 miles	\$111.00/vehicle \$50.00/pax	\$77.00/vehicle \$35.00/pax	\$111.00/vehicle \$50.00/pax	

Assumptions: Using mileage provided in Table 1 of the HDR Ferry Fares memo referenced in Appendix A of the Traffic Forecast Report (2014 DSEIS.) Yellow highlights indicate fares prorated for distance (there is lack of consistency with regard to route distances throughout the source documents.)

The pricing table compares the modified Shuttle and Dayboat algorithms with existing AMHS fare structures. The large swing in cost to the end user is apparent from this table. Due to the fact that AMHS fares are arbitrary (see documentation) any inclusion or extrapolation using these fares is suspect. Particularly so, because they provided a reasonable methodology and then discarded half of it and applied the other half to produce a favorable outcome on their preferred alternative which uses exclusively short ferry links under 20 miles.

The following table looks only at rates relevant to marine segments in the Preferred Alternative (2B):

<b>Routes less than 20 miles (Shuttles)</b>	<b>2014 DSEIS Pricing (algorithm applied)</b>	<b>2014 AMHS fare structure</b>
Skagway/Haines 15 miles	\$22.00/vehicle 7.50 pax	\$49.00/vehicle \$31.00/pax
Skagway/Katzehin 16 miles	\$24.00/vehicle 8.00/pax	\$52.00/vehicle \$33.00/pax

Assumptions: Using mileage provided in Table 1 of the HDR Ferry Fares memo referenced in Appendix A of the Traffic Forecast Report (2014 DSEIS.) Yellow highlights indicate fares prorated for distance (there is lack of consistency with regard to route distances throughout the source documents.)

Recalculating ticket prices proposed in Alternative 2B to reflect current AMHS fares (which are quite high on the Skagway/Haines route) makes a dramatic illustration of how drastically the price of ticket from Skagway to Katzehin would change: The price balloons from \$24/vehicle and \$8/passenger to \$52/vehicle and \$33/passenger. For the proverbial family of four, the price goes from \$52 to \$168.

Following the same line of reasoning, applying the algorithm fairly across the board to runs longer than 20 miles, would produce a savings for the end user of roughly 30%. Conversely, applying current AMHS rate pricing structure to Skagway/Katzehin route would create a revenue increase for AMHS of 217% for vehicles and 413% for passengers.

RESPONSE: For existing AMHS routes, published AMHS fares were used. For new routes that were shortened versions of existing AMHS routes, AMHS fares prorated by distance were used. For new routes less than 20 miles in length, a fare based on a flat fee to board the ferry and a cost per mile were used. This methodology was used for Alternatives 2B and 3 because it is more suitable for the shorter shuttle ferry operations that are included in these alternatives. These fares are somewhat lower than the existing AMHS fares due to the efficiencies generated from using ferries designed as day boats with drive through loading and unloading and no reservation system expense, as well from the higher traffic volumes generated by frequent regularly scheduled service.

In comments on the 2006 Final Draft EIS, the Skagway Marine Access Commission raised serious objections about how AKDOT established fares for project alternatives and requested that the AKDOT reveal its methodology for setting the favorable ticket prices associated with Alternative 2B.<sup>(11)</sup> Our scoping comments in 2012 reiterated the same concerns.<sup>(11&12)</sup> “The principals of sound economic analysis and transportation planning require that these discrepancies be addressed in any future planning documents produced by the AKDOT.” The agency has failed to do this. Not only is there no discussion of fare methodology in the document, the only supporting marine highway fare document referenced in the Traffic Forecast Report (Appendix AA) is missing. NEPA requires agencies to disclose the information upon which it relied to support its decision and then articulate a satisfactory explanation that rationally connects the facts found and the choices made.

RESPONSE: Per your comment, documentation of how the fares were developed has been added to the Final SEIS at Revised Appendix AA, *Traffic Forecast Report*.

The arbitrary and capricious assignment of favorable ticket prices to some alternatives and not to others skews the entire project analysis with regard to demand, user cost, revenue generation and costs to the state.

RESPONSE: As documented in the addition to Revised Appendix AA, assigned ticket fares were not arbitrary or capricious. Documentation of how the fares were derived is provided in Revised Appendix AA of the Final SEIS.

### **AMHS Fare Equalization Study**

In 2013 AMHS announced that it would contract with a consultant for a Fare Equalization Study. Subsequently, Northern Economics was awarded the contract to perform an “AMHS Ferry Tariff Policy and Fare Structure Development.”<sup>(13)</sup> The contract beginning and end dates were December 06, 2013 and April 30, 2014. The contract states that “AMHS would like to look at the next steps in implementing change with the goal of creating a ‘fair and equitable’ tariff structure while also examining tariff policy for a more efficient approach to managing tariffs into the future.... The structure is difficult to manage, difficult for the traveling public to understand and has many inconsistencies resulting from various internal and external factors.” The contract has been extended beyond those dates and despite

numerous requests to have the results of that study included in the DSEIS the department has steadfastly refused to release the information contained in the report. <sup>(14-16)</sup> Sources within the department and the Governor's office have stated, off the record, that the study would not be released until after the election which is coincidentally within a few days of the end of the comment period.

In correspondence with the FHWA over the past year, the Municipality of Skagway has requested that the agency make the fare equalization study public and incorporate its results into the 2014 DSEIS. In their response the Federal Highway Administration has taken the position: "As a system-wide proposal, it (the study) is entirely separate from the JAI project in timing and in scope." In their letter of October 3, 2014, the Municipality stated that "Ticket prices on the ferry system will be significantly impacted by the fare adjustments which will result from the AMHS fare equalization study. This analysis is an invaluable tool for evaluating end user costs associated with the various alternatives and should be integrated into the EIS."

The fact that a study of AMHS fare structure has been underway concurrently with the development of alternatives with variable (and questionable) ticket pricing methodology in the DSEIS and is planned to be released shortly after the close of the public comment period should be carefully scrutinized by the FHWA and other reviewing agencies.

**RESPONSE:** The AMHS Tariff Analysis was not publicly released until January 2015, after the Draft SEIS was published. DOT&PF project staff and FHWA have reviewed the study and, after consultation with AMHS, have determined that no information from the study changes any of the assumptions for determining fares used to analyze alternatives. (See previous response regarding Ticket Prices on page 4).

The National Environmental Policy Act (NEPA) requires that to reach a reasonable decision, an agency must show it considered the right information, and then articulated a satisfactory explanation that rationally connects the facts found and the choices made. An agency violates NEPA if it fails to furnish high quality data to the public that supports its conclusion, fails to adequately evaluate reasonable alternatives or fails to describe and assess the direct, indirect, and cumulative impacts of a proposed alternative. The DSEIS violates NEPA because the methodology for assigning fares is never explained.

**RESPONSE:** Per the comment, documentation of how the fares were developed is included in the Final SEIS at Revised Appendix AA, *Traffic Forecast Report*.

Favorable fares are selectively applied to benefit the preferred alternative thereby skewing the analyses of user benefit, demand and subsidy identification which are in turn used to justify the choice of Alternative 2B as the preferred alternative.

**RESPONSE:** The fare assignment was not skewed. Please refer to the documentation added to Revised Appendix AA, *Traffic Forecast Report*.

### **The DSEIS ignores national and state plans and mandates for highway safety**

Safety on America's highways is a top priority for our country and for the State of Alaska. Over decades, Federal transportation law has created a framework of policy that embraces safety over other considerations. The most recent iteration of this federal law, Moving Ahead for Progress in the 21st Century (MAP-21), promotes an aggressive safety agenda including the National Strategy on Highway Safety *Toward Zero Deaths*. "With over 33,000 fatalities occurring on the Nation's highways each year road safety remains one of the most challenging issues facing America." [39]

The Alaska Department of Transportation and Public Facilities' (AKDOT&PF) mission statement also lists as its number one priority providing "for the safe and efficient movement of people and goods." [39] The State's Long Range Transportation Plan (LRTP) aligns statewide needs with these goals. The recent draft of the Southeast Alaska Transportation Plan (SATP) also lists "Maintain or Improve Modal Safety" as one of its goals. "Our mission is to reduce the accident and injury rates to zero," Governor Parnell said in a recent press release on highway safety. "This initiative is a step toward making Alaska's highway system safer." [40]

Sadly, the AKDOT&PF's track record would indicate that it is only paying lip service to the national mandate for highway safety. In its recently released Draft Supplemental Impact Statement (DSEIS) for the Juneau Access Improvements Project, AKDOT&PF gives only passing consideration to safety. In direct conflict with the goals of MAP 21 and State and Federal transportation plans, safety is not included as a factor in the "Statement of Purpose and Need." [1]p.1-10] The DSEIS acknowledges on page 7-16 that many comments were received during the scoping process requesting that safety and reliability be included in the Purpose and Need. Specifically the Skagway Marine Access Commission recommended in its February 20, 2012 scoping comments that "safety, reliability and predictability" be included in the Statement of Purpose and Need. [50]

**RESPONSE:** Safety is included in the purpose and need statement for a project only if there is a demonstrable safety problem on the transportation link being considered. An example would be a link in which the number of accidents is higher than the state average for similar transportation links. Safety is not a problem with the current system; therefore, safety is not a stated purpose and need for the proposed project. The Draft SEIS does address accident potential associated with the primarily highway project alternatives, Alternatives 2B and 3 (see Sections 4.3.7.5 and 4.4.7.5).

Approximately 66% of all fatalities in motor vehicle crashes in Alaska occur in rural areas, [41] yet the AKDOT has chosen as its preferred alternative (2B) a substandard road through a remote dangerous coastal corridor. Forty-three avalanche chutes and about one hundred geologic hazards including rock slides, landslides and rock falls have been identified along the proposed route. [1]p.3-37,38.] The document makes no mention of freeze/thaw weather phenomenon such as icing, and freezing rain which may be an even bigger concern in this coastal corridor. There are no studies of the high winds and large swells which historically have been experienced by fishermen at the ferry terminal which is the planned terminus of the road.

**RESPONSE:** All roads constructed under State and federal authority must follow State and federal design procedures and standards that have been adopted/established to support safe travel. Avalanche mitigation is presented in the *2014 Update to Appendix J – Snow Avalanche Report*, and the geological hazard mitigation is presented in the *2014 Update to Appendix D – Technical Alignment Report*.

Two studies (Lynn Canal Wind and Wave Climatology – Multi-Year Extremes and Lynn Canal Wind and Wave Climatology Study for Vessel Operations) were prepared to study winds and waves in the project area. These studies are available at [www.juneauaccess.alaska.gov](http://www.juneauaccess.alaska.gov).

Current data for the north and south wind directions suggest relatively low wave height (less than 2 feet) near the Katzehin Ferry Terminal site regardless of the magnitude of the wind event. The Katzehin Ferry Terminal would be somewhat exposed to the westerly direction. There are no current data presented for the westerly direction; however, the fetch distance is short, and wave heights should be relatively low.

By the Department’s own admission the DSEIS grossly under estimates highway crashes on this road by a factor of three. The DSEIS projects 5 deaths due to traffic accidents will occur on the preferred alternative East Lynn Canal road over 30 years. However, if you redo their calculation of this number,<sup>[1]p.4-63</sup> you will come up with 14-15 deaths in 30 years.<sup>[42]</sup> The AKDOT&PF rejects the option of continuing service in the Lynn Canal corridor by the Alaska Marine Highway System which has a perfect safety record. In the past 40 years of service, there have been no safety-related fatalities to travelers aboard the Alaska Marine Highway.<sup>[1]p.4-63</sup>

**RESPONSE:** DOT&PF and FHWA reviewed the calculation and found an error. The error in the Draft SEIS is corrected in the Final SEIS. See Sections 4.3.7.5 and 4.4.7.5.

### **Federal oversight is required by law**

Clearly, the AKDOT&PF’s bias toward their preferred alternative moves the state away from the objectives outlined in Map 21. By choosing the most dangerous alternative over the safest, the state fails to meet the performance goals set forth in MAP-21. In fact the state’s proposal marks a significant regression from the exceptional safety record of the Alaska Marine Highway System ferries that currently ply the Inside Passage Waters.

The U.S. Secretary of Transportation has an independent duty to ensure the Juneau Access Project and its EIS comply with federal law. The Secretary must furnish guidance in the preparation of the EIS and must “independently evaluate” the EIS.<sup>[43]</sup> Also, federal courts have determined that the U.S. Department of Transportation has an independent duty to ensure compliance federal metropolitan transportation planning goals and guidance,<sup>[44]</sup> and must ascertain that the state highway departments have adhered to federal law and regulations.<sup>[45]</sup>

The burden rests with the Federal Highway Administration (FHWA) to ensure that state transportation agencies have adhered to federal law and regulations. For the FHWA to ignore or deliberately overlook the omissions in the state’s EIS with regard to safety would constitute a classic case of regulatory capture. **Regulatory capture** is a form of political corruption that occurs when a regulatory agency, created to act in the public interest, instead advances the commercial or special concerns of interest

groups that dominate the industry or sector it is charged with regulating. Regulatory capture is a form of government failure. It creates an opening for firms to behave in ways injurious to the public (e.g., producing negative externalities). The agencies are called "captured agencies". In this case FHWA is charged with oversight of the AKDOT&PF for a project which will consume the nearly a half billion dollars of federal funds. To ignore or overlook the safety concerns with the Juneau Access Improvements Project would make the FHWA complicit in a project which safety statistics indicate would be injurious to the public.

Other provisions of federal Law require the U.S. Secretary of Transportation to ascertain the safety of the project before approving it and that the EIS must be sufficiently detailed for the Secretary to ensure that the project is safe.<sup>[44]</sup> In addition, the Secretary of Transportation shall consider the needs for effectiveness and safety in transportation systems,<sup>[46]</sup> which includes recognizing and preserving "the inherent advantage of each mode of transportation" and promoting "safe, adequate, economical, and efficient transportation."<sup>[47]</sup>

**RESPONSE:** The commenter's characterization of the application of MAP-21 to the NEPA decision-making for this project is inaccurate. MAP-21 and its successor, the Fixing America's Surface Transportation Act, do not require that every project fully implement every broad policy goal in the legislation. The citation that FHWA has a "duty to ensure compliance federal metropolitan transportation planning goals and guidance" is not applicable to this project. In short, the project is not within the boundaries of a Metropolitan Planning Organization (MPO). The only MPOs in Alaska are in Anchorage and Fairbanks. That said, any alternative selected would meet engineering design standards and practices and be safe and reliable, and would therefore meet the safety policy goals of MAP-21.

The suggestions that FHWA has ignored or deliberately overlooked safety or engaged in "regulatory capture" are patently false and exhibit a misunderstanding of the relationship between FHWA and DOT&PF in the NEPA process. FHWA takes its oversight role to ensure that the project's process and documentation comply with federal law seriously. In fact, although the SEIS is prepared by the DOT&PF, it is the FHWA's document. It is not a case of FHWA "regulating" DOT&PF. FHWA reviews analyses prepared for the SEIS and does not sign off on the SEIS until it satisfies applicable laws and regulations. For this reason, the SEIS development and NEPA process are overseen by FHWA environmental specialists, and the document, the process to develop it, and the technical analyses undergo legal review prior to publication. For this project's SEIS publication, that review has been particularly rigorous, given the legal history of the project.

As previously mentioned, because there is not a documented safety problem in Lynn Canal, safety is not an element of the purpose and need. The safety record of AMHS and anticipated safety of the primarily roadway alternatives are disclosed in the SEIS in Sections 4.3.7.5 and 4.4.7.5. While it is true that highway travel tends to have more accidents, there is no reason to believe that accident frequency under Alternative 2B or 3 would be statistically different than on similar highways in Alaska.

### **Sound engineering principals and intelligent transportation systems technology not applied**

The Juneau Access project must be in compliance with MAP 21 and the State's Long Range Transportation Plan (LRTP) and the Southeast Alaska Transportation Plan (SATP). The U.S. Secretary of

Transportation cannot approve it otherwise. Ironically, the SATP under its goal of maintaining and improving modal safety makes the claim that it will accomplish this goal through the application of “sound engineering principles, including intelligent transportation systems technology...”<sup>[49]</sup> In direct opposition to that strategy, the AKDOT&PF has proposed a road that neglects to include important safety features that would improve Alternative 2B. Some of these include road lane width, road shoulder width and provisions for pedestrians, hikers and bicyclists.

**RESPONSE:** The Juneau Access Project is in compliance with MAP-21 and the State’s Long Range Transportation Plan. The highway segments of any build alternative selected would be constructed according to the typical section identified in Section 2.3.3 of the Draft SEIS and illustrated in Figure 2.7b. This typical section has 11-foot-wide travel lanes, 4-foot-wide paved shoulders, and a minimum of 8 feet of traversable side slope (4:1 or flatter) on either side, except in guardrail areas. The lane width would conform to the appropriate American Association of State Highway and Transportation Officials (AASHTO) standard.

For Alternatives 2B and 3, the shoulder width would be an exception to the AASHTO-recommended standard of 6 feet. A 4-foot shoulder was determined to be best suited for the rugged terrain that the highway would cross. Cost was a consideration, as well as the amount of use the shoulder would likely receive. The typical section also shows that widened shoulders would be created with excess material in upland areas. These widened areas, turnouts, and no parking signs in particular areas would minimize parking on the paved shoulders. The typical section for highway alternatives would match the width to be constructed on Glacier Highway from Amalga Road to Echo Cove. A 4-foot-wide paved shoulder would be adequate to accommodate bicyclists and pedestrians.

The Seward Highway provides a dramatic comparison to an existing road with a similar geography and safety hazards. Many lives have been lost on the Seward Highway. Since 2006, planners and residents at numerous public meetings have been calling for a divided highway as the best and most effective engineering enhancement on the Seward Highway. Yet, the DSEIS fails to analyze the cost/benefits of making the road to Katzehin a divided highway. As demonstrated in the following analysis, safety upgrades to the Seward Highway will be necessary in the future with a projected price tag of approximately half a billion dollars. The cost of safety upgrades to the Juneau Access road is not disclosed in the DSEIS. The federal mandates for safety and good fiscal planning would dictate that safety features should be incorporated in the Juneau Access Road sooner than later.

**RESPONSE:** Highway design takes into account a number of factors, not least of which is the amount of traffic the facility needs to accommodate. The traffic on the Seward Highway outside of Anchorage is more than 10 times greater (7,000 to 10,000 ADT) than the traffic forecast for the JAI Project alternatives (835 ADT reported in the Draft SEIS). Based on the traffic forecast for the JAI Project, a two-lane highway is sufficient to safely accommodate the traffic. Consequently, a cost benefit analysis for a divided highway has not been done for the Final SEIS.

Moreover, all roads constructed under State and federal authority must follow State and federal design procedures and standards that have been adopted/established to support safe travel. The highway design includes safety measures such as widened embankments, guardrail, recessed pavement markers, paint, and signage. The roadway design geometrics that would be used on the

project are appropriate for a rural arterial highway with an ADT of less than 2,000. Extensive future safety upgrades for alternative highway links are not anticipated.

2nd slide from DOT&PF presentation at the 2009 Girdwood Traffic Safety Corridor meeting <sup>[35]</sup>

### **Failure to include key safety features in the Alternative 2B road**

The DSEIS fails to include important features that would improve the safety of Alternative 2B (Alt2B), such as increased road lane width and road shoulder width, and best design provisions for pedestrians, hikers and bicyclists.

#### Road lane width

AASHTO standards for rural arterial roads include a lane width of 12 feet for any speed and ADT of over 2000. <sup>[32]p.1</sup> The estimated summer ADT for the Alt2B road is 1,345. <sup>[1]Apdx.AA-p.26</sup> The nature of the traffic will not be distributed evenly, but will tend to bunch up in pulses associated with the ferry schedules. In addition, enforcement presence will be low and inconsistent (Table A), which will encourage aggressive driving such as dangerous passing and speeding. No slow-vehicle turnouts or passing lanes are included in the new construction for Alt2B. (Table A) Combining the higher summer ADT and the potential for aggressive driving, the level of travel danger on the Alt2B road could easily approach that of a rural arterial road with 2000 ADT.

During winter, the estimated ADT for the Alt2B road is 460, <sup>[1]Apdx.AA-p.26</sup> well below the AASHTO standard for 12 foot lanes. However, the potential for snow, slush, and icy road conditions, again combined with low enforcement presence, increases the likelihood of drivers losing control of their vehicle. The long response times for emergency services (Table A) will increase the chance that serious injuries could

result. The 2 feet added travel width of 12 foot lanes over 11 foot lanes would give drivers a better chance of regaining control before having an accident.

**RESPONSE:** The highway segments of any build alternative selected would be constructed according to the typical section identified in Section 2.3.2 of the Draft SEIS and illustrated in Figure 2.7b. This typical section has 11-foot-wide travel lanes, 4-foot-wide paved shoulders, and a minimum of 8 feet of traversable side slope (4:1 or flatter) on either side, except in guardrail areas. The lane width conforms to the appropriate AASHTO standard.

As stated in Section 4.3 of the Draft SEIS, there are 11 pullouts along the Alternative 2B corridor. DOT&PF anticipates that approximately 25 percent of the road for Alternative 2B would be striped to allow for safe passing. These passing zones, as well as pullouts, would be available to slower moving traffic to allow following vehicles to pass.

Adverse weather conditions make driving challenging on any road. The project's road alternatives would be no different during adverse weather conditions than any other road in Southeast Alaska. Alternative 2B would include a new maintenance station that would be staffed full time, which would improve maintenance response times to address adverse weather conditions. Alternative 3 would include a maintenance staging site. Details are discussed in Attachment C to the 2014 and 2017 Updates to *Appendix D - Technical Alignment Report*.

#### Road shoulder width

The DSEIS presents AASHTO standards for rural arterial roads as:

“Shoulder Widths: AASHTO Standards indicate that a 4-foot-wide usable shoulder should be considered for rural arterials with average daily traffic (ADT) less than 400 that have travel lanes 11 feet wide and Design Speeds from 40 to 55 mph. For ADTs between 400 and 1,500 a 6-foot-wide usable shoulder should be considered.” <sup>[1]Apdx.D-p.5]</sup>

The DSEIS proceeds to justify using 4 foot paved shoulders “to minimize construction impacts while still providing for bicyclists and pedestrians.” <sup>[1]Apdx.D-p.5]</sup> There is no discussion in the DSEIS of the AASHTO guidance based on 400 to 1,500 ADT as described above. All projected ADTs for Alt2B are above 400, and the summer ADT of 1,345 approaches the upper limit of adequacy for a 6 foot shoulder.

Both in summer and in winter, crashes are likely whenever a driver leaves his/her lane of travel. Having 6 foot shoulders gives drivers more opportunity to recover before impacting a fixed object (such as a guardrail or retaining wall), rolling over in a ditch, etc.

Road shoulders also provide important areas for disabled vehicles and enforcement stops. A 4 foot shoulder prevents vehicles from pulling well out of the travel lane, increasing the chance of additional accidents.

**RESPONSE:** The shoulder width for Alternatives 2B and 3 would be an exception to the AASHTO recommended standard of 6 feet. For all other alternatives, the proposed 4-foot-wide shoulders meet AASHTO standards for the projected ADT. A 4-foot-wide shoulder was

determined to be best suited for the rugged terrain that the highway would cross. Cost was a consideration as well as the amount of use the shoulder would likely receive. The typical section also shows that widened shoulders would be created with excess material in upland areas, which would provide sufficient room for emergency parking and allow vehicles that errantly stray from the travel lane to safely recover. These widened areas, turnouts, and no parking signs in particular areas would minimize parking on the paved shoulders. The typical section for highway alternatives would match the width to be constructed on Glacier Highway from Amalga Road to Echo Cove. A 4-foot-wide paved shoulder would be adequate to accommodate bicyclists and pedestrians.

### Bicyclists and Hikers

The potential for bicycle use of the Alt 2B road is high. Summer recreational cycling and touring is well established on the Klondike Highway, Haines Highway and Alaska Highway. Scenic values of Berner's Bay and Lynn Canal will entice cyclists to make day trips from one of the 11 pullouts, or touring trips along the length of the road. Commercial bicycling tours may develop.

AKDOT&PF encourages bicyclists:

“We are excited to be able to promote bicycle tourism in the state of Alaska,” said Bob Laurie, a transportation planner and the bicycle and pedestrian coordinator for the Alaska Department of Transportation and Public Facilities. “We have fabulous vistas and low-traffic highways that beg exploration. Connecting to Washington State via the ferry system and collaborating with Canada is next on our list.”<sup>[33]</sup>

The 4 foot paved shoulder designed for Alt2B provides only minimal room for bicycle travel along the road. Any vehicles pulled over into the shoulder will block bicyclists, forcing them far into travel lanes. Conversely, bicyclists occupying the shoulder will increase the likelihood of vehicle-bicycle collisions. Wider lanes and shoulders would decrease the potential for accidents involving bicycles.

Hikers will be attracted to trail heads and scenic overlooks, they are less likely to trek along the road shoulders for long distances. However, the narrow lane and shoulders near the trail head pullouts and scenic overlooks could lead to wandering pedestrians in the shoulder areas nearby. Once again, wider lanes and shoulders give everybody a better chance to avoid collisions.

RESPONSE: As stated above, the shoulder width for Alternatives 2B and 3 is an exception to the AASHTO recommended standard of 6 feet. For all other alternatives, the proposed 4-foot-wide shoulders meet AASHTO standards for the projected ADT. A 4-foot-wide shoulder was determined to be best suited for the rugged terrain that the highway would cross. Cost was a consideration, as well as the amount of use the shoulder would likely receive. The typical section also shows that widened shoulders would be created with excess material in upland areas, which would provide sufficient room for emergency parking and allow vehicles that errantly stray from the travel lane to safely recover. These widened areas, turnouts, and no parking signs in particular areas would minimize parking on the paved shoulders. The typical section for highway alternatives would match the width to be constructed on Glacier Highway from Amalga Road to Echo Cove. Moreover, Glacier Highway north of Tee Harbor has comparable shoulders, substantial bike use, and higher ADTs than anticipated for Alternative 2B. Given that there are no

documented accidents over the 5 year period between 2011 and 2015 involving bicyclist and pedestrians on this stretch of Glacier Highway supports DOT&PF's assessment that a 4-foot-wide paved shoulder would be adequate to safely accommodate bicyclists and pedestrians on Alternative 2B and 3.

#### Flawed and incomplete analysis of accidents and other hazards

The DSEIS's estimate of fatal accidents runs counter to the evidence, the DSEIS fails to consider other major accidents, and the DSEIS ignores obvious hazards. These deficiencies render the DSEIS's conclusion regarding accidents and hazards arbitrary.

#### Alternative 2B Traffic Crashes

The state of Alaska monitors 5 types of traffic crashes: total, fatal, major injury, minor injury, and property damage only. Crashes are defined as vehicle accidents, except those due to natural causes, weapons, or pre-existing medical conditions, or under \$2000 of damages. <sup>[31]p.10</sup>

The DSEIS presents two crash type estimates for the Alt2B road, total crashes (annual and project lifetime of 30 years) and fatal crashes (project lifetime). <sup>[1]p.4-63</sup> Estimates for major injury, minor injury and property damage only crashes are not given.

As a first step toward estimating the missing crash information, the crash numbers presented in the DSEIS were recalculated with the information provided in the DSEIS. The annual total crash number was verified, but the project lifetime numbers for total crashes and fatal crashes were different. (See Table C in the Appendix)

The missing crash estimates were generated using the DSEIS given number for total crashes, the different, recalculated number for fatal crashes, and statewide averages for 2001-2011.

Table B. Alt2B Road Crashes Estimates

crash type	number of crashes		
	Alt2B annual crash estimates, printed / recalculated *	missing Alt2B annual crash estimates, using total annual crashes = 22 and statewide crashes breakdown 2001-	project lifetime crashes  (annual x 30 years), printed /
TOTAL	22		600 / 660
fatal	not given / 0.475		5 / 14.25
major injury		.71	16
minor injury		5.8	174
property damage only		15.4	462

\* Table C. DSEIS Crash Data Recalculation (in the attached Appendix)

\*\* Table D. Alt2B road missing crashes (in the attached Appendix)

When evaluating safety programs, AKDOT&PF often uses numbers for “serious” crashes: fatal + major injury crashes combined. <sup>[2]p.2]</sup> For the Alt2B road, over the project lifetime of 30 years, the serious crash estimate is 30 (14+16). This means that the expectation for Alt2B is to experience about 1 fatal or major injury crash per year.

Traffic crashes for alternative 2B road compared to AMHS

The projected fatalities and other crashes for the Alt2B road are small compared to high traffic volume roads, but unlike Seward Highway, there is an alternate road: the Alaska Marine Highway System.

	<u>Alt2B road *</u>	<u>AMHS ferries **</u>
TOTAL crashes:	660	near 0
fatal crashes:	14	0
major injury crashes:	16	0
minor injury crashes:	174	0
property damage only crashes:	462	near 0

\* Table B

\*\* <sup>[1]p.4-63]</sup>

The rare low-speed bumps at terminal staging areas and when loading ferry car decks are unlikely to even qualify for the property-damage-only crash category which excludes accidents of less than \$2000 damage. Crashes would not occur while vehicles are safe on board a ferry in transit.

RESPONSE: Information on traffic related accidents and fatalities has been updated in Section 4.3.7.5 and 4.4.7.5 of the Final SEIS. Based on Statewide crash rate information and 2025 traffic projections, it is anticipated that there would be approximately 39 crashes per year on the East Lynn Canal Highway. In the 30-year operation period (2025 through 2055), it is estimated there would be approximately 1,156 crashes. It is anticipated that there would be approximately 30 crashes per year on the West Lynn Canal Highway and, in the 30-year operation period (2025 through 2055), it is estimated there will be approximately 886 crashes.

Other Hazards - Long Bridges

Alt2B's three long bridges over Berner's Bay and Katzeihin river deltas would be 2nd, 3rd, and 4th longest bridges in the state. <sup>[51][1]Apdx.D-p.25]</sup> The DSEIS does not address the potential hazard posed by ice forming on extremely long bridges. Icing on bridge deck surfaces and other poor winter driving conditions will be worst during times of least traffic volume. Poor road conditions will often occur at the same time that high velocity winds roar down the river valleys. Emergency response times will be high, especially at Katzeihin. These factors combine to make winter driving conditions on the Alt2B bridges more dangerous than the norm.

RESPONSE: The use of automated de-icing systems on bridges would be considered based upon the technical and economic feasibility. However, fixed de-icing systems are not common in Alaska and there is no crash data in Alaska that suggests icing on bridges causes a higher crash rate than other portions of the roadway. Through an experimental project, de-icing systems were

installed on two of the Knik River bridges in Southcentral Alaska. These systems were expensive to install and even more so to maintain.

The project roadway and bridges would be treated similar to other roads throughout Alaska. This treatment includes applying salt for de-icing and sand for traction. Adverse weather conditions makes driving any road challenging. The project road alternatives would be no different during adverse weather conditions than any other road in Southeast Alaska. Alternative 2B includes a new maintenance station facility that would be staffed full time, which would improve maintenance response times during adverse weather conditions. Further details are discussed in Attachment C to the *2017 Update to Appendix D - Technical Alignment Report*.

The need for and cost of necessary safety upgrades is not included in the DSEIS

The Alternative 2B route shares similar geography and safety hazards with the Seward Highway, and AKDOT&PF should use its experience with the Seward Highway to inform its expectations and predictions for an East Lynn Canal road. As demonstrated by AKDOT&PF's experience with the Seward Highway safety upgrades will eventually be necessary. The cost of safety upgrades is not disclosed in DSEIS.

**RESPONSE:** Safety comparisons to the Seward Highway outside of Anchorage are not applicable. While the Seward Highway traverses the coast and has several avalanche zones, the comparison ends there. The Seward Highway has considerably higher traffic volumes (7,000-10,000 ADT) as compared to Alternative 2B (835 ADT reported in the Draft SEIS). This high level of traffic, coupled with limited passing opportunities, contributes to heavy congestion and causes travelers to make unsafe maneuvers. With 10 times or less traffic, the JAI Project is not anticipated to experience similar driving behavior. The forecast does not anticipate reaching anywhere near the traffic levels experienced on the Seward Highway; therefore, it is incorrect to predict that upgrades would be necessary within the forecast period. Alternative 2B would be designed to meet appropriate safety standards.

The Seward Highway from Mile Post 37 to 117 is similar in length, terrain, waterways, climate, and avalanche hazards to the proposed East Lynn Canal, Juneau Access road described under Alternative 2B. However, there are important differences in traffic volume and safety features. This section compares the two roads, reviews crash estimates, and discusses safety improvement issues, costs, and funding.

The proposed East Lynn Canal road under Alternative 2B (Alt2B) includes existing Glacier Highway from Auke Bay to Echo Cove (27 miles), widening the existing road from Echo Cove to Cascade Point (3 miles),

new construction from Echo Cove around Berner's Bay (~18 miles), and new construction along the east shore of Lynn Canal to a ferry terminal north of Katzehin River (~30 miles). [1]Fig.2-7a)

A similar length of Seward Highway (Hwy 1) runs along Turnagain Arm from MP117 to MP75 (42 miles), then inland through river valleys and saddle passes to the intersection with Highway 9 (37 miles).

The thirty mile stretch of Seward Highway from MP117 to MP87 was designated a Traffic Safety Corridor in 2006,<sup>[2]</sup> leading to enhanced safety measures and much available information. Therefore, most comparisons will use the Seward Highway Traffic Safety Corridor (SwdTSC), but other Seward Highway areas will be included when information is available.

The following table compares the Alternative 2B route to Seward Highway in detail. It demonstrates the similarities in the environment (terrain, waters, and climate), physical hazards (such as avalanche chutes), and design features (bridges, pullouts) for both routes, and contrasts the differences in the amount of traffic, road characteristics (such as lane and shoulder width), and safety features (such as reflectors, rumble strips, and emergency services). This comparison shows that the Seward Highway has more safety features than Alternative 2B despite similar geography and hazards.

TABLE A. ALT2B Road Compared To Seward Highway MP37 to MP117

TABLE A – continued. ALT2B Road Compared To Seward Highway MP37 to MP117

		Alt2B - Katzehin to Auke Bay	Seward Highway MP37 to MP117
other safety	avalanche program	full, active program	full, active program
	enforcement safety dedicated trooper presence	0 (zero) - state troopers will be responsible north of Eldred Rock; Juneau CBJ south, <sup>[1]p.4-48]</sup> regular patrols of highway segments between Echo Cove and Haines not anticipated by State Troopers, Juneau PD, Haines PD <sup>[1]Apdx.EE-p.207]</sup>	SwdTSC: 4 (before TSC) 7 (beginning 2010) <sup>[2]p.8]</sup> plus special programs coordinated between Bureau of Highway Patrol and communities of Anchorage and Girdwood <sup>[2]p.18]</sup>
	emergency services	outside current service districts for both Haines and Juneau <sup>[1]Apdx.EE-p.207]</sup> up to 50 miles away at Auke Bay, Juneau, or from Haines via boat then up to 20 miles away – response times likely to be long. <sup>[1]p.4-48]</sup>	SwdTSC: from Anchorage (adjacent) or Girdwood (adjacent), response times quick.

RESPONSE: As already mentioned, a safety comparison with the Seward Highway is not valid, given the tremendous difference in anticipated traffic (835 ADT reported in the Draft SEIS for the Juneau road alternatives versus 7,000-10,000 on the Seward Highway).

Project characteristics do not meet warrants for the installation of rumble strips.

Improvements to the Seward Highway to enhance safety

Due to the similarities between the roads, Seward Highway may be used as a case study to discuss costs and results of safety enhancements. The Seward Highway from MP 87 (near Girdwood) to MP 117 was designated Traffic Safety Corridor (TSC) in 2006. <sup>[2]</sup> Traffic Safety Corridors target improved safety through Engineering, Enforcement, Education (the “three Es”) and Emergency Response (the “4th E”). Implementation Plans are developed for the three Es, while emergency responders are encouraged increase daily alert readiness. <sup>[34]p.6]</sup>

Engineering improvements focus on bringing degraded infrastructure up to standards, then improving roadway features to increase safety. Enforcement includes actions such as hiring new troopers, increased patrols, double fines, and coordinating with local community police departments. Education includes measures such as media campaigns, roadside message boards and “this is your speed” signs, and encouraging citizen participation through REDDI (Report Every Dangerous Driver Immediately). <sup>[2][34]</sup>

Traffic Safety Corridors assess progress through monitoring fatal crashes and major injury crashes, <sup>[2]p.2+8]</sup> but the AK Department of Public Safety also monitors total crashes. <sup>[29]</sup> The list below shows crash rates

for SwdTSC pre- and post-designation, using AKDOT&PF rates for fatal and major injury crashes, with other rates estimated from statewide averages for 2001-2011. (see Appendix, Table E)

	<u>crash rates per 1 million miles</u>	
	SwdTSC after designation <u>(1996-2006)</u>	SwdTSC after designation <u>(2006-2013)</u>
estimated TOTAL crash rate:	2.490	1.648
actual fatal crash rate:	0.021	0.025
actual major injury crash rate:	0.073	0.038
estimated minor injury crash rate:	0.655	0.434
estimated property damage only crash rate:	1.741	1.152

The Seward Highway TSC has been remarkably successful. All crash rates, except fatal, have been reduced since TSC designation. Major injury rates have decreased by half. Estimated minor injury crash rates are down by a third. At a February 2013 public meeting, a Department of Public Safety official stated that the past five years have been the highway’s lowest for total crashes. <sup>[29]</sup>

The fatal crash rate, however, remains stubbornly unchanged. This is despite the considerable resources applied to the Seward Highway TSC over the years. Enforcement presence within the TSC was increased to 7 Troopers in 2010. <sup>[2]p.8</sup> Special enforcement and educational programs targeted dangerous driver behavior based on annual audits and data analysis. <sup>[34]p.8</sup> Engineering improvements worth \$35 million have been accomplished, with \$410 million additional engineering improvements scheduled through 2018, pending available funds. When these projects are accomplished, sections of the TSC may be decommissioned. <sup>[2]p.13</sup> Whether these improvements will reduce the fatal crash rate is unknown.

Safety improvements costs and funding for the Alt2B road

The Alt2B road will not have the enhanced safety engineering features that brought about the lower SwdTSC crash rates. Rather, the Alt2B road as planned is below normal AASHTO standards <sup>[1]Apdx.D-p.5</sup> Experience tells us that Seward Highway has needed several safety upgrades, and Juneau Access, as currently planned, will probably also need safety improvements.

RESPONSE: Per 23 CFR 625.3, highways on the National Highway System (NHS) are required to meet AASHTO standards. The highway design for the alternatives meets AASHTO standards for rural arterials for the traffic volumes projected for the proposed project, with the exception of shoulder width for Alternatives 2B and 3. For all other alternatives, the proposed 4-foot shoulder meets AASHTO standards for the projected ADT. An adequate recoverable slope is also included in the road design to allow vehicles that errantly stray from the travel lane to safely recover.

As already mentioned, a safety comparison with the Seward Highway is not valid, given the tremendous difference in anticipated traffic (835 ADT reported in the Draft SEIS for the Juneau Access road alternatives versus 7,000-10,000 on the Seward Highway). Based on the anticipated

traffic forecast, and design features planned (e.g. avalanche and geological hazard mitigation), DOT&PF does not anticipate Alternative 2B would need substantial additional safety improvements during the 2025 to 2055 timeframe. Adequate safety features and mitigation have already been incorporated into the preliminary design of Alternative 2B.

Additionally, if the accident rate for fatalities and incapacitating injuries on the Alt2B road exceeds the statewide average, the State of Alaska must identify it as a High Risk Rural Road and obligate funds to improve safety on the road. <sup>[49]</sup> As improvements at Seward Highway show, these upgrades are very costly. These costs should be disclosed in the DSEIS.

**RESPONSE:** The road cannot be defined as a High Risk Rural Road (HRRR) per the FHWA definition. FHWA defines HRRR as "any roadway functionally classified as a rural major or minor collector or rural local road:

A) on which the accident rate for fatalities and incapacitating injuries exceeds the statewide average for those functional classifications or roadway; or

B) that will likely have increases in traffic volumes that are likely to create an accident rate for fatalities and incapacitating injuries that exceeds the statewide average for those functional classifications of roadway."

The road is not classified as a collector or local road; therefore, the HRRR program does not apply.

The accident rate on Alternative 2B is anticipated to be comparable to other similar rural highways. Based on the anticipated traffic forecast, and design features planned (e.g. avalanche and geological mitigation), DOT&PF does not anticipate Alternative 2B would need to be designated as a safety corridor. Adequate safety features and mitigation have been incorporated into the preliminary design of Alternative 2B.

In fact, the Seward Highway was planned to be much safer in the past, but these safety features were very expensive and were taken out of the design. As early as 2009, AKDOT&PF acknowledged that a divided highway would be the safest design for the Seward Highway, but the estimated \$600 million price tag seemed out of reach. <sup>[35][36]</sup> In 2012, STIP Budgeting estimated the cost of upgrading the entire Seward Highway TSC to a divided highway would be \$750 million. <sup>[2]p.12]</sup> The \$410 million partially funded Seward Highway TSC improvement projects will include additional passing lanes and slow vehicle turnouts, but only 2 miles of divided highway. <sup>[19][2]p.13]</sup>

The Juneau Access Improvement DSEIS must propose a road that the Secretary of Transportation has deemed to be safe, and the costs of making this road safe must be included in the DSEIS. The Secretary cannot approve a substandard road.

**RESPONSE:** All roads constructed under State and federal authority must follow State and federal design procedures and standards established to support safe travel. The costs associated with construction, maintenance, and operation of the alternative road components are disclosed in the Draft and Final SEIS.

# **User Cost Skewed Due to Omission of Foot Passenger Data**

An analysis of the Juneau Access Draft SEIS and its failure to consider ferry passengers traveling without vehicles.

November 18, 2014

*Skagway Marine Access Commission  
Box 1076  
Skagway, Alaska 99840*

## FOOT PASSENGERS

The Juneau Access Improvement Project Draft Supplemental Environmental Impact Statement (DSEIS) entirely fails to consider foot passenger traffic, which is an important aspect of travel within Lynn Canal. The omission of data on passengers traveling without vehicles seriously flaws the analysis of user costs and traffic forecasts. The document offers an assumption concerning vehicle occupancy that runs counter to the evidence. As a result, the DSEIS's calculations of user costs are arbitrary and capricious and violate the National Environmental Policy Act.

The DSEIS uses approximations of vehicle occupancy to calculate user costs, community economic benefit, system efficiency, etc. AMHS ferry foot passengers (walk-on passengers) are up to 45% of the current ferry ridership between Juneau-Haines-Skagway. The DSEIS ignores foot passengers, both as an element in developing calculated estimates within the DSEIS, and as a substantial part of the current traffic among the communities - users who will be affected by the Juneau Improved Access project.

RESPONSE: DOT&PF and FHWA disclosed the effects to walk-on passengers under Alternatives 2B and 3 in Sections 4.3.7.5 and 4.4.7.5 of the Draft SEIS, respectively. Additional information about walk-on passengers has been added to the Final SEIS for all alternatives. The document does not ignore passengers traveling without a vehicle and all people wanting to travel Juneau-Haines and Juneau-Skagway are included in the traffic forecasts. What the commenter is misunderstanding (or objecting to) is that there is a fundamental difference in the how people would travel in the primarily road alternatives (Alternatives 2B and 3) as compared to primarily ferry alternatives (Alternatives 1, 1B, 4A, 4B, 4C, and 4D).

Under Alternative 2B, a substantial segment of current walk-on traffic would be expected to convert to personal vehicle travel. Cost is currently the principal deterrent for ferry travel with a vehicle. As described in the Draft SEIS User Benefit Analysis, under the No Action and Enhanced Service alternatives, the roundtrip cost for a driver and standard vehicle is \$242. Under Alternative 2B, round-trip ferry costs for a driver and vehicle would be \$39 (Table A-13). Adding vehicle operating costs to the comparison results in \$244 for No Action and Enhanced Service and \$80 for Alternative 2B. This substantial decrease in the cost of travel would prompt many more travelers to take their own vehicles. Further, the substantial increase in overall traffic associated with Alternative 2B would represent many more opportunities for walk-ons to travel with family, friends, and acquaintances.

The primarily ferry alternatives operate more like a public transit system, whereby the ferry leg is long, and comprises a large proportion of the trip. For those alternatives, the public transportation mode (ferry) transports people and vehicles, dropping them off relatively close to their destination. This makes it more conducive to walk onto the ferry, and because the ferry trip is highly subsidized, is seen as good deal. Of note, however, is that even for the primarily ferry alternatives there is typically a short vehicle component of the trip at each end (Skagway has the only ferry terminal in Lynn Canal that is within reasonable walking distance from residential

areas for most residents. All other existing terminals must be reached by private vehicle or private carrier; therefore, a vehicle is used for at least part of the trip).

For the primarily road alternatives, a greater proportion of the trip would be made in a vehicle than on public transportation (shuttle ferry). Because of the distances to reach the ferry terminals, particularly at Katzehin, these alternatives would be less conducive to passengers walking onto the ferry – e.g., friends, cab, bus or other form of transportation would be needed to drive someone to Katzehin to catch the shuttle ferry. This would be a change in travel patterns and would also be an impact. For some travelers, this is an adverse impact and for others it is considered a beneficial impact. Both the beneficial and adverse impacts to walk-on passengers are identified and disclosed in the SEIS. The total amount of demand in the corridor (both walk-ons and vehicles) is captured and represented in the forecasts. As is discussed in the SEIS, DOT&PF and FHWA anticipate that with the primarily road alternatives, most of the travel will be via vehicle (i.e. not walk on) and those that were used to making their trip as a walk-on passenger will use a vehicle. The implications of this change are fully disclosed in the SEIS.

To compare user costs, the DSEIS uses a hypothetical family of 4 in an SUV as the approximated vehicle occupancy [p.ES-7 and ES-16]. User costs for any other travelers, with or without a vehicle are completely absent. Analysis of AMHS data shows that a vehicle occupancy of 4 cannot account for more than ¼ of ferry vehicles and still leave at least 1 occupant for each remaining vehicle. (Table X).

Therefore, of the people now traveling between Juneau-Haines-Skagway, the maximum that could possibly be represented by the user costs based on 4 occupants/per vehicle is only 23% of all users. (Table X) No information on changes to user costs among the alternatives is provided for the minimum of 77% of all other users.

The costs to current AMHS foot passengers under Alternative 2B are shown in Table Y. **All possible scenarios result in increased costs to these users.** Costs for a one-way trip are quite high for current foot passengers that do not own or always have access to a vehicle for travel, from \$100 to \$200 with existing services, and from \$70 to \$80 if a commercial bus/van business develops.

#### TABLE X. VEHICLE OCCUPANCY AND FOOT PASSENGER ESTIMATES

The DSEIS vehicle occupancy and foot passenger estimates are based on AMHS 2011 data for Juneau-Haines-Skagway of 82,186 total passengers and 26,061 total vehicles.

DSEIS vehicle occupancy estimates:

- (A) 3.2 = total passengers divided by total vehicles [ $82,186 \div 26,061 = 3.16$ ]
- (B) 3.3 = total passengers divided by total vehicles [numbers not given]
- (C) 2.3 = National Household Travel Survey 2009 dataset, filtered for trip distance, rural states and city size Other estimates:
- (D) foot passengers = 45% of total passengers [ $82,186 \times 45\% = 36,984$ ] McDowell, 2000

	passengers with vehicles (PwV)		resulting total foot passengers
	calculated with vehicle occupancy estimates	calculated with % foot passenger estimate	
DSEIS (A)	83,395		< 0
DSEIS (B)	86,001		< 0
NHTS (C)	59,940		22,246
McDowell (D)		45,202	36,984

The only calculation of foot passengers based on an estimate of actual AMHS foot passenger numbers is (D).

How many vehicles could possibly carry 4 occupants while still allowing at least 1 person in each remaining vehicle? From row (D) column PwV above: 45,202 = the number of passengers with vehicles. From the DSEIS, vehicles with 4 occupants are used to present costs to travelers.

If one quarter of vehicles carry 4 occupants, then 26,061 passengers will be in vehicles with 4 occupants:

$$\begin{array}{ccccccc}
 26,061 & \div & 4 & = & 6,515 & \times & 4 & = & 26,061 \\
 \text{(total vehicles)} & & \text{(one quarter)} & & \text{(\frac{1}{4} of vehicles)} & & \text{(occupants)} & & \text{(passengers in vehicles with 4 occupants)}
 \end{array}$$

how many passengers remain?	how many vehicles remain?
45,202 total passengers with vehicles	26,061 total vehicles
<u>- 26,061</u> passengers in vehicles with 4 occupants	<u>- 6,505</u> vehicles with 4 occupants
19,141 passengers left	19,546 vehicles left

19,141 (passengers left) ÷ 19,546 (vehicles left) = 0.97 occupants per vehicle, or about 1 person per vehicle.

82,186	36,984 (45%)	26,061 (32%)	19,414 (23%)
total passengers	foot passengers	maximum possible passengers in vehicles with 4 occupants	passengers in vehicles with occupancy of 1 per vehicle

**Only ¼ of vehicles could possibly carry 4 occupants while still allowing for at least 1 passenger in each remaining vehicle.**

\* includes fuel, oil, tires, maintenance, insurance, license, registration, depreciation, financing

\*\* not extant, no guarantee will develop, based on unlikely traffic estimates and inflated demand forecast

\*\*\* one-way miles, unlikely to be only charge for such a long distance

note: rental car (2B-b) and taxi (2B-d) are only existing options for residents that don't own a vehicle, or who belong to households with only one vehicle, which may be needed by family member for work commute, etc. --households with 0 or 1 vehicle: Juneau 44.7%, Haines 53.7%, Skagway 37.6% (DSEIS Apdx EE p.127)

note: with rental car option (2B-b) – individuals that cannot drive would need to pay ferry fare for added person, and other trip added expenses, such as lodging, meals, etc. for driver

note: 80 miles from Auke Bay to Katzehein used throughout

**RESPONSE:** The source document of the 45 percent walk-on rate is dated 2000. A review of the 2000 and 2015 AMHS *Annual Traffic Volume Report* (travel within Lynn Canal) indicates a 14 percent reduction in vehicle travel and a 26 percent reduction in pedestrian travel. The 2015 walk-on percentage within Lynn Canal is estimated to be 34 percent summer only and 30 percent for the year. Additional information regarding the forecast of walk-on passengers has been added to Appendix AA of the Final SEIS.

A family of four was used in the Draft SEIS to illustrate the relative costs of alternatives because it represents a common family unit. It was not the basis of calculating all user costs as assumed in the tables above. The Final SEIS has been updated to show costs for other travelers and to more thoroughly explain the derivation of user costs.

(walk-on passenger = foot passenger)

page	alternative	statement in document	problem
xxiii	all alternatives	ADT – described as “average daily traffic”	Defined on page 1-8 as “...the number of vehicles passing a given point in either direction”, therefore should be described as “average daily <b>vehicle</b> traffic”
ES-5	all alternatives	2 traffic models, both based only on vehicles per day	doesn't include existing users that travel without a vehicle
ES-7	all alternatives	user costs compared among alternatives based on users described as “a family of four in a 19-foot vehicle”	existing users that travel without a vehicle are not included in user cost estimates, and thus are excluded from user cost comparisons
ES-16	alternatives comparison	Summary Table, all demand and capacity figures based on “vehicles per day”	foot passengers ignored
ES-16	alternatives comparison	Summary Table, user costs based on 19 ft. vehicle with family of 4	ferry foot passengers ignored, actual avg vehicle occupants not used,
ES-16	alternatives comparison	Summary Table, travel time estimates based on vehicle travel only	ferry foot passengers ignored
1-9	all alternatives	Table 1-1: AMHS traffic volume history gives round trips, but not one-way trips	many one-way passengers, foot and vehicle, not represented
1-9	all alternatives	Table 1-1: AMHS traffic volume given for total vehicles and total passengers only	does not present breakdown of passengers traveling with vehicle vs. foot passengers
1-13	all alternatives	Table 1-3: only ADT (vehicle) information presented	AMHS foot passengers excluded
1-13	all alternatives	“Note” justifies exclusion of walk-on passengers from DSEIS because “primary responsibility of State is to provide transportation facility and not the transport itself.”	foot passengers are large portion of existing users. EIS supposed to evaluate all impacts. Therefore, effects upon users (costs, travel time, etc) should include ALL users
1-17	all alternatives	state costs for road/highway and AMHS all converted to vehicle miles	costs should be given in absolute and comparable units (eg. per mile, per trip) AND in reference to traffic variables (vehicles and people)

1-18	all alternatives	user costs all based on “family of four in a 19-foot vehicle”	AMHS costs inflated because: smaller vehicle=lower cost, less that 4 people in vehicle=lower cost, foot passenger=lower cost
2-10	1-no action	traffic capacity based on ferry vehicles only (footnote 10)	capacity of ferry foot traffic ignored
2-11	1-no action	travel times based on vehicles only, with check-in, load and unload times	long check-in times, load and unload times don't apply to foot passengers.
2-12	1-no action	user costs calculated only as “cost per vehicle” presumably for the 19-foot vehicle and family of 4	doesn't include smaller vehicles, vehicles with fewer passengers, all foot passengers
2-12	2-enhanced AMHS	traffic capacity based on ferry vehicles only (footnote 13)	capacity of ferry foot traffic ignored
2-13	2-enhanced AMHS	travel times based on vehicles only, with check-in, load and unload times	long check-in times, load and unload times don't apply to foot passengers.
2-14	2-enhanced AMHS	user costs calculated only as “cost per vehicle” presumably for the 19-foot vehicle and family of 4 mentioned earlier	doesn't include smaller vehicles, vehicles with fewer passengers, all foot passengers
2-15	3-Juneau road	travel capacity only for vehicles	current foot passenger users eliminated
2-15	3-Juneau road	travel time only for vehicles	current foot passenger users eliminated
2-15	3-Juneau road	user costs calculated only as “cost per vehicle” presumably for the 19-foot vehicle and family of 4 mentioned earlier	doesn't include smaller vehicles, vehicles with fewer passengers, all foot passengers
2-19	3-West Side road	travel capacity only for vehicles	current foot passenger users eliminated
2-19	3-West Side road	travel time only for vehicles	current foot passenger users eliminated
2-20	3-West Side road	user costs calculated only as “cost per vehicle” presumably for the 19-foot vehicle and family of 4 mentioned earlier	doesn't include smaller vehicles, vehicles with fewer passengers, all foot passengers
– same applies to alternatives 4A, 4B, 4C and 4D not included here –			
2-32	alternatives comparison	Table 2-26, capacity in vehicles per day	doesn't include existing users that travel without a vehicle
2-32	alternatives comparison	Table 2-26, travel times for vehicles only	doesn't include foot passenger travel time
2-33	alternatives comparison	Table 2-26, user costs based only on vehicle travel	doesn't include effect upon foot passenger costs
2-33	alternatives comparison	Table 2-26, footnote 3 says user costs based on family of 4 in standard pickup, but figures match other calculation? (see ES-16 above)	doesn't include effect upon foot passenger costs

3-32	social/economic environment-transportation	AMHS 2011 passenger-to-vehicle ratio in Lynn Canal calculated as 3.2 passengers/vehicle	calculated by dividing total passengers into total vehicles, foot passengers lumped in with vehicle passengers
3-32	social/economic environment-transportation	assumes actual number of passengers traveling with cars on AMHS in 2011 was closer to the highway average of 2.3 passengers/vehicle, so may have been approx. 22,300 walk-on passengers	foot passengers estimated indirectly by using national highway vehicle occupancy ratio, actual estimate available from AMHS data not used. Also, though acknowledges 2.3 is more reasonable estimate than above, continues to use 3.2 in rest of DSEIS – especially pertinent when used to estimate economic benefits for all alternatives
4-4	methods-transportation	total demand model based on vehicular travel only	eliminates foot passengers
4-5	methods-transportation	user benefits and costs based on vehicle travel	doesn't include effects upon foot passengers
4-64	3-Juneau road-transportation	using year 2011, estimated that 22,100 passengers were walk-on, out of 82,000 total passengers	works out to 27% - percentage figure not given in document, no technical reference given for estimate, McDowell 2000 study estimated 45% foot passengers, what does analysis of most recent AMHS data show?
4-64	3-Juneau road-transportation	20-50% of walk-on passengers used to estimate demand for private bus/van service from Katzehin, resulting in 70% (26-52 per day) in summer and 30% (8-15 per day) in winter	also states that 90% of households have vehicles, so more realistic estimate would be 10-20% of residents plus proportion of walk-on passengers that are non-resident – total presumably less than 20-50%
4-64	3-Juneau road-transportation	above used to solicit service estimates from private businesses. Result = bus coach service from Haines-Juneau and Skagway-Juneau, daily in summer, every 2 days in winter, at \$40 to \$60 one way	private businesses estimated service based on inflated demand (above), if demand is less and/or spotty, private service reduced in frequency, increased in cost, or unlikely to develop
----- rest of section 4 – all based on vehicle traffic only, effects upon foot passengers ignored -----			

RESPONSE: A family of four was used in the Draft SEIS to illustrate the relative costs of alternatives because it represents a common family unit. It was not the basis of calculating all user cost as assumed in the tables above. The Final SEIS has been updated to show costs for other types of travelers and to more thoroughly explain the derivation of user costs.

# ALTERNATIVE 1B OPTIMIZED

---

A more efficient proposal for enhanced ferry  
service than Alternative 1B in the Juneau Access  
Draft SEIS

November 18, 2014

*Skagway Marine Access Commission  
Box 1076  
Skagway, Alaska 99840*

Review of Alternative 1B of the Juneau Access Improvements Draft Supplemental Environmental Impact Statement by the Skagway Marine Access Commission.

## Evaluation of Alternative 1B

*Based on the brief description and undeveloped discussion of Alternative 1 in the DEIS, the court cannot conclude that an alternative aimed at providing improved and more efficient ferry service was “rigorously explored” by the agencies. Judge Sedwick 105 Order and Opinion Granting SJM*

The Alaska Department of Transportation and Public Facilities (AKDOT) proposed Alternative 1B in the Juneau Access Improvements Draft Supplemental Environmental Impact Statement (DSEIS) as a response to the Alaska District Court’s 2008 decision that the state did not adequately consider improving ferry service in Lynn Canal using existing assets. In other words, the state failed to provide an apples-to-apples comparison for the purpose of evaluating the costs and benefits of the various proposed Juneau Access improvements.

The state’s new proposal is called “Alternative 1B – Enhanced Service with Existing AMHS Assets,” described on the DSEIS website as follows:

“Alternative 1B includes all of the components of Alternative 1, No Action, but focuses on enhancing service using existing AMHS [Alaska Marine Highway System] assets without major initial capital expenditures. Similar to Alternative 1, Alternative 1B includes: a continuation of mainline ferry service in Lynn Canal; the AMHS would continue to be the NHS [National Highway System] route from Juneau to Haines and Skagway; no new roads or ferry terminals would be built; and in addition to the Day Boat ACFs [Alaska Class Ferries], programmed improvements include improved vehicle and passenger staging areas at the Auke Bay and Haines ferry terminals to optimize traffic flow on and off the Day Boat ACFs as well as expansion of the Haines Ferry Terminal to include a new double bow berth to accommodate the Day Boat ACFs. Service to other communities would remain the same as the No Action Alternative. Alternative 1B keeps the *M/V Malaspina* in service after the second Day Boat ACF is brought online to provide additional capacity in Lynn Canal. Enhanced services included as part of Alternative 1B are a 20 percent reduction in fares for trips in Lynn Canal and extended hours of operations for the reservation call center.

“Mainline service would include two round trips per week in the summer and one per week in the winter with Auke Bay-Haines-Skagway-Haines-Auke Bay routing. During the summer, the *M/V Malaspina* would make one round-trip per day seven days per week on a Skagway-Auke Bay-Skagway route, while one Day Boat ACF would make one round trip between Auke Bay and Haines six days per week, and one would make two round-trips per day between Haines and Skagway six days per week. The Day Boat ACFs would not sail on the seventh day because the mainliner would be on a similar schedule. In the winter, ferry service in Lynn Canal would be provided primarily by the Day Boat ACFs three times per week.”

The Skagway Marine Access Commission has reviewed Alternative 1B to determine whether AKDOT has met the judge’s mandate of “rigorously” exploring an alternative aimed at

providing improved and more efficient ferry service. It is our opinion that while alternative 1B provides certain “enhancements” to the No-Build Alternative 1, it falls short of providing an optimized model that deploys existing assets in the most efficient way. Given the state’s choice of vessels, their proposal fails to match capacity to demand. The planners focused on adding capacity but neglected to consider the efficiencies that can be gained by optimum routing configurations.

RESPONSE: DOT&PF and AMHS staff developed a new alternative based on direction from the Court, shared a draft of that alternative with the public during a new scoping effort, took input on the new alternative, and revised that alternative based on the scoping comments received. Alternative 1B complies with NEPA and the Court’s order. The new alternative took into account changes that had occurred to the “existing assets” in the AMHS fleet since the 2006 Record of Decision, the capabilities of the vessels in the fleet, and the needs and mission of the fleet to the numerous communities served by AMHS. DOT&PF and FHWA fully disclosed the thought process and evaluation in the Draft SEIS. Appendix CC, *Development of Alternative 1B – Enhanced Service with Existing Alaska Marine Highway System (AMHS) Assets*, of the Draft SEIS described the efforts undertaken to develop Alternative 1B and documented the data and analysis relied on to create as reasonable an alternative as possible toward solving the transportation problems in the corridor using only existing assets. Alternative 1B incorporated the following considerations:

- Existing AMHS assets reasonably available and feasible for use in Lynn Canal
- Programmed AMHS assets (decisions by AMHS independent of the project that made new Day Boat ACFs available in the fleet)
- Enhancements that could be employed, as suggested by the Plaintiffs, that do not involve substantial initial capital investments

The resulting alternative, Alternative 1B, was developed to the same level as all other build alternatives in the Draft SEIS and was rigorously analyzed to the same degree as other project alternatives.

Throughout the following analysis we rely on AKDOT’s figures in Appendix GG of the DSEIS: Marine Segments Technical Report.

### **Alternative 1B fails to match capacity to demand**

A key weakness of Alternative 1B is the deployment of the M/V Malaspina to the Auke Bay-Skagway route. Historically, this route experiences less traffic than the Auke Bay-Haines route. Yet Alternative 1B proposes to use the Malaspina, with its large vehicle capacity and high labor costs to service this less-traveled route, creating excess capacity between Auke Bay and Skagway at significant cost to the system. This scenario also fails to take advantage of the Malaspina’s ability to run longer than 12 hours per day. The vessel’s 24/7 crewing requirements allow it to follow its traditional Auke Bay-Haines-Skagway-Haines-Auke Bay route, thereby

avoiding the 12 hour rule that limits the length of route segments that the ACF Day boat can service.

At the same time, 1B proposes to use the smaller ACF day boat, with its lower vehicle capacity, on the more popular Auke Bay-Haines, leaving little excess capacity.

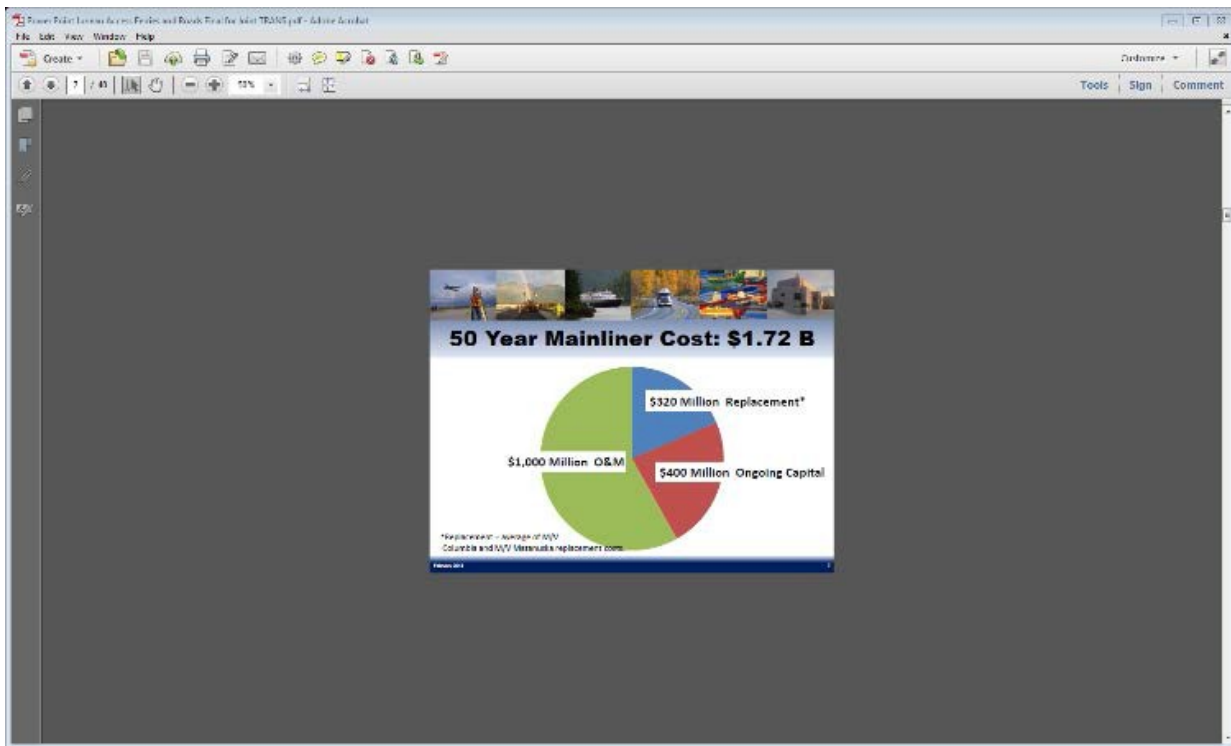

RESPONSE: Given the current ferry terminal configurations, the Day Boat ACF cannot make the Auke Bay-Skagway daily round trip within 12 hours, which precludes reasonably scheduling the Day Boat ACF for the link. The Day Boat ACF, coupled with mainliners, provide sufficient capacity for the Auke Bay-Haines link. However, as demonstrated by Alternative 1B, as presented in the Final SEIS, there is flexibility in routing the *M/V Malispina* through Haines as traffic demand warrants.

### **Alternative 1B never considers the option of removing mainliners from Lynn Canal**

A second weakness of Alternative 1B is the failure to consider eliminating “through” mainliners carrying traffic from points south of Auke Bay. Whether calculated by hour or miles, mainliners with their large crews and 24/7 crewing requirements, are very expensive to operate. The Southeast Alaska Transportation Plan (SATP) calls for retiring one or more of the aging mainline vessels in the next few years. By comparison, the new ACF day boats, which are included in Alternative 1B, present a more efficient transportation model for Lynn Canal, requiring one-fifth the crew of the larger ships.

RESPONSE: Absent a highway in Lynn Canal, AMHS intends to continue mainline service in Lynn Canal. The rationale includes scheduling concerns and inconvenience to the travelers passing through Juneau. In addition, the mainliner inclusion in Alternative 1B increases access (number of trips per week) and provides additional capacity in Lynn Canal, in keeping with the project’s purpose and need. With the assets provided, there is typically insufficient capacity in Lynn Canal to handle traffic on the days mainliners would turn around at Auke Bay.

In recent years at many public presentations, AKDOT officials have referenced the high cost of maintaining and replacing mainliners as a justification for the Juneau Access road project. For example, on March 6, 2014 Jeff Ottesen, Director of Program Development for AKDOT, gave a presentation to the Joint Transportation Committees of the Alaska Legislature entitled “Why Extending Roads and Shortening Ferry Links is a Sound Policy Choice.” The pie chart below is from his presentation and shows the excess cost to the state of maintaining and replacing mainliners.

Given this concern on the part of AKDOT, it is curious to us that only the two road alternatives [Alternatives 2B and 3] have not been burdened with the costly mainliner through-service from Bellingham and Prince Rupert. In those alternatives, traffic arriving in Auke Bay from points south must offload in Auke Bay and transfer to the road system in order to drive to a ferry terminal located at either Berners Bay or Katzechin.

RESPONSE: AMHS mainline service would terminate at Auke Bay with construction of a highway alternative. Mainline service is not needed to meet demand, or to increase access/frequency. The mainliner was included in the primary ferry options because it provided necessary capacity, thereby attempting to better satisfy the project's purpose and need. Travelers who were already on the mainliner would be required to transfer to a separate ferry, increasing their travel time and inconvenience.

None of the all-marine options considers offloading passengers and vehicles in Auke Bay and transferring them to a more efficient marine transportation system to reach Haines or Skagway. This scenario provides the best apples-to-apples comparison to a road link with regard to isolating the costs of providing efficient and enhanced service in Lynn Canal.

RESPONSE: The continued mainline service in Lynn Canal for the ferry alternatives is necessary to provide capacity. Analyses of the proposed Alternatives 1B Optimized and 5 in the Final SEIS at Appendix II, *Alternative 1B Optimized and Alternative 5 Evaluation*, discuss this issue.

## Our proposal: Alternative 1B Optimized

The optimization of 1B involves two key changes to AKDOT's Alternative 1B:

- Reconfiguration of route segments and homeporting the *Malaspina* in Haines
- Elimination of “through” mainline service north of Juneau

Homeporting the *M/V Malaspina* in Haines allows that vessel to be deployed on a Haines-Skagway-Haines-Auke Bay-Haines route. This routing accomplishes the following:

- Uses the large vehicle capacity of the *Malaspina* on the route with the most demand;
- Takes advantage of the *Malaspina*'s ability to run longer than 12 hours a day;
- Allows the *Malaspina* to shuttle traffic between Haines and Skagway, freeing up an ACF day boat to run between Haines and Auke Bay;
- Matches the capacity of the smaller ACF vessel to the demand of the less frequently traveled route between Skagway and Auke Bay;
- Eliminates the need for the “through” mainliners and frees up a mainliner to be retired or deployed to other parts of the region such as Sitka; and
- Saves the AMHS more than \$1 million in annual operating costs. (We believe the savings may be significantly higher. Please see page 8 for discussion of possible errors in the DSEIS' mainline data.)

## Assumptions

Alternative 1B Optimized assumes the same vessel and terminal improvements as are proposed for Alternative 1B, and requires no new construction of ships or berths. Our analysis does not address the AMHS reservation system or reduction of fares. Our analysis also assumes an elimination of through-mainliner service north of Juneau. (AKDOT would have the option to use mainliners in case of schedule disruptions, on alternative routes such as those servicing Sitka, or left idle to save system costs.)

The purpose of this analysis is to demonstrate that service and capacity can be increased at reduced cost through better use of three vessels: two ACFs and the *Malaspina*. This scenario also allows for a more accurate apples-to-apples comparison with the two road alternatives.

Please note the following abbreviations: HNS = Haines; SGY = Skagway; ABY = Auke Bay

## Route Configuration – Summer Schedule

- ACF 1 homeports in Auke Bay and runs ABY-HNS-ABY once a day, seven days a week
- ACF 2 homeports in Skagway and runs SGY-ABY-SGY once a day, seven days a week
- The *Malaspina* homeports in Haines and runs HNS-SGY-HNS once a day and HNS-ABY- HNS once a day, seven days a week

All departures are in the morning with the Skagway ACF departing early enough to free up the Skagway Terminal for the arrival of the *Malaspina*.

This proposed route configuration better matches capacity to demand. It increases the number of sailings per week and provides more departure time options.

## Route Configuration – Winter Schedule

- ACF 1 homeports in Auke Bay and runs ABY-HNS-ABY once a day, five days a week
- ACF 2 homeports in Haines and runs HNS-SGY-HNS twice a day, five days a week
- The *Malaspina* is not used on this route and is available for use as AMHS sees fit

This provides slightly more capacity and more sailings per week than AKDOT's Alternative 1B. When not in use on its Haines route, the ACF in Auke Bay would be available should AKDOT wish to provide additional sailings in Lynn Canal or surrounding communities such as Hoonah, Gustavus, Angoon, etc.

## Alternative 1B Optimized Schedules

We have developed proposed schedules to verify number of round trips and determine crew times. Schedule start times are arbitrary. The schedules are notional and are not intended to show route connections or homeport locations. Final schedules and homeport locations will be based on system implementation.

Transit times are based on AKDOT's estimated transit times in Alternative 4C (Conventional Monohull out of Auke Bay), found in the JAI Marine Segments Technical Report (DSEIS Attachment C). See Exhibit B.

<b>Purpose and Need Factors</b>	<b>1B</b>	<b>1B Optimized</b>
<b>Auke Bay-Skagway</b>		
Forecasted demand (vehicles per day)	90	90
Capacity (vehicles per day)	176	106

Round-trip sailings per week	9 <sup>2</sup>	7 <sup>3</sup>
<b>Auke Bay-Haines</b>		
Forecasted demand (vehicles per day)	100	100
Capacity (vehicles per day)	154	282
Round-trip sailings per week	8	14
<b>Haines-Skagway</b>		
Forecasted demand (vehicles per day)	53	53
Capacity (vehicles per day)	260	176
Round-trip sailings per week	15	7

<sup>1</sup>Data are derived from Appendix GG, Juneau Access DSEIS, Marine Segments Technical Report.

<sup>2</sup>An additional six trips per week could be made by taking the Day Boat ACF between Auke Bay and Haines and transferring ferries.

<sup>3</sup>An additional seven trips per week could be made from Skagway to Auke Bay by taking the *Malaspina* southbound or transferring in Haines to the ACF.

## Cost Comparison

The table below compares estimated yearly fuel and crew costs under AKDOT's Alternative 1B and our proposal, Alternative 1B Optimized. As the table shows, Alternative 1B Optimized generates an estimated annual savings of more than \$1 million.

### Cost comparison, Alternative 1B and Alternative 1B Optimized

(total annual costs in millions)

	<b>Alternative 1B</b>	<b>Alt. 1B Optimized</b>	<b>Savings with 1B Opt.</b>
Fuel costs	\$5.7	\$7.5	(\$1.8)
Crew costs	\$13.9	\$10.9	\$3.0
<b>Total</b>	<b>\$19.6</b>	<b>\$18.4</b>	<b>\$1.2</b>

Figures for Alternative 1B are from JAI DSEIS Appendix GG. Calculations for Alternative 1B Optimized can be found in Exhibit A.

We believe annual savings associated with Alternative 1B Optimized may be significantly more than this analysis indicates. On page 1 of Attachment A in the DSEIS, “AMHS Mainline Operating Costs,” the methodology and results for the Comparison of Vessel Operating Days Chart appear to be incorrect. The chart lists a total of 40.9 Mainline Days for the number of days the mainliners operate in North Lynn Canal. It is difficult to see how this value was derived considering that under alternatives that use mainline ferries as a transportation component, the document states that two mainliners will run in summer and one in winter.

Summer is defined as approximately 22 weeks (44 mainline sailings) and winter is approximately 30 weeks (30 mainline sailings). These combine for a total of 74 mainline sailings a year. Even if you discount the running time in North Lynn Canal as not a full day (24 hours) and assume a run time of 18 hours (75 percent of a day), calculations render an operating days total of 55.5 days: 74 sailings x 0.75 days = 55.5 days. This is significantly higher than the 40.9 days listed in the DSEIS. This is important, as this number is used to calculate crew and fuel costs for the mainline component of a majority of the alternatives. This problem was brought to the attention of Gary Hogins, Project Manager. In an email exchange on November 3, 2014 he acknowledged that the document is in error and corrections would need to be made.

## SUMMARY

### **Advantages of Alternative 1B Optimized compared to Alternative 1B**

The cost analysis for Alternative 1B Optimized is contained in Exhibit A. Our preliminary work indicates that this proposal could save the state more than \$1million in annual operating costs while increasing capacity and travel options. We believe the savings could be significantly greater (see note on preceding page). Eliminating “through” mainliners from Lynn Canal allows the AMHS to redeploy those ships to increase service to other northern panhandle communities, provide back-up in case of service disruptions, or to retire an aging vessel.

Unlike Alternative 1B, our proposal scales capacity to demand, with room for growth. Our proposal increases capacity on the popular Auke Bay-Haines route while more closely matching capacity to demand on the Auke Bay-Skagway and Skagway-Haines routes. Other benefits include:

- Multiple deployment options, especially in the winter;
- More flexibility and travel options for passengers;
- Use of the *M/V Malaspina* in her traditional role of day boat in Lynn Canal. While this increases fuel costs slightly (owing to a longer route than the *Malaspina* route proposed under 1B), those costs are more than offset by more efficient use of labor (*Malaspina* crew is paid 24/7 whether it is tied up at the dock or sailing on a route); and
- Direct access from Skagway to Juneau seven days a week in the summer.

Our proposal is just one alternative. There may be even more optimal deployments of the ferry system’s existing vessels and crew. We believe our analysis demonstrates, at a minimum, that the state failed to do a rigorous analysis of the most efficient and effective use of existing assets to enhance service in northern Lynn Canal.

In addition, if the purpose of developing alternatives is to provide a sound, rational basis for comparing competing transportation proposals, consistent assumptions should be used regarding the use of mainline service north of Juneau.

To quote Judge Sedwick, we “cannot conclude that an alternative aimed at providing improved and more efficient ferry service was rigorously explored by the agencies.”

## **Exhibit A: Alternative 1B Optimized Crew and Fuel Costs**

Alternative 1B Optimized is comprised of the following three vessels shown here with their respective routes and ASV's (Alaska Standard Vehicle) capacity:

- The MV Malaspina (HNS-SGY-ABY-HNS) with a vehicle capacity of 88 ASV (Alaska Standard Vehicles)
- ACF Day Boat 1 (ABY-HNS-ABY) 53 ASV
- ACF Day Boat 2 (SGY-ABY-SGY) 53 ASV

Below are calculations for crew and fuel costs that comprise approximately 87% of vessel operating costs. The data used in this analysis has been derived from Appendix GG of the Juneau Access DSEIS: Marine Segments Technical Report.

### Malaspina

**Summer Season: 153 Days (153 Operating Days)**

#### **Crew cost:**

Malaspina hourly crew cost: \$1321.57

$153 \text{ days} \div 7 \text{ days/week} \times 168 \text{ hr/week} = 3,672 \text{ hrs/season} \times \$1321.57 \text{ crew cost/hour} =$   
**\$4,852,800**

#### Fuel cost:

Malaspina fuel consumption: 436.26 gal/hour

HNS-SGY-HNS time underway per week: 12.37 hr HNS-ABY-HNS time underway per week:  
 66.73 hr

$12.37 + 66.73 = 79.1 \text{ hours underway per week}$

$153 \text{ op/days} \div 7 \text{ days/week} \times 79.1 \text{ hrs/week} = 1728.90 \text{ hrs/season} \times \$3.38 / \text{gal} \times 436.26 =$   
**\$2,549,365**

\$4,852,800 Malaspina crew costs

\$2,549,365 Malaspina fuel costs

**\$7,402,165 Total Malaspina Summer costs**

**ACF1**

Summer season: 153 Days (153 Operating Days)

Crew cost:

Day crew: \$698.74/hr Night crew: \$156.55/hr

Day Crew:

$153 \text{ days} \div 7 \text{ days/week} \times 84 \text{ hr/wk} = 1836 \text{ hrs/season} \times \$698.74 = \$1,282,881$

Night crew:

$153 \text{ days} \div 7 \text{ days/week} \times 84 \text{ hr/wk} = 1836 \text{ hrs / season} \times \$156.55 = \$287,418$

Summer Crew cost = **\$1,570,299**

Fuel cost:

ACF Fuel Consumption: 289.48 gal/hr

ABY-HNS-ABY time underway per week: 66.73 hr/wk

$153 \text{ op days} \div 7 \text{ days/wk} \times 66.73 \text{ hr/wk} = 1458.60 \text{ hr/season} \times \$3.38/\text{gal} \times 289.48 \text{ gal/hr} =$   
**\$1,427,156**

**SAVINGS \$1,204,187 \***

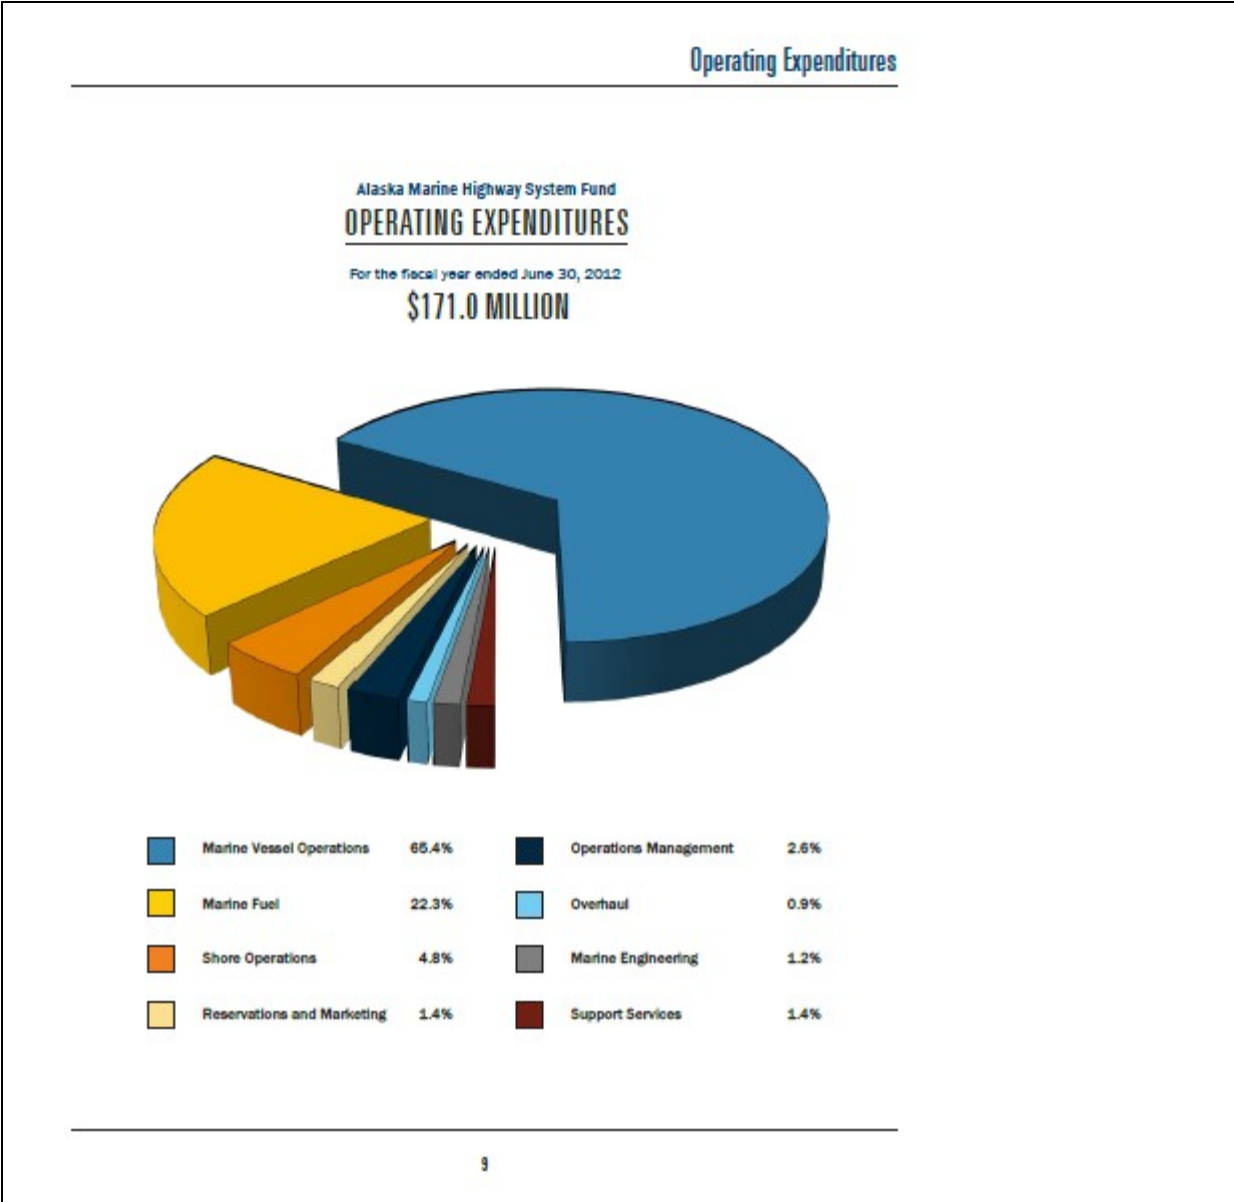

\*We believe annual savings associated with Alternative 1B Optimized may be significantly more than this analysis indicates. On page 1 of Attachment A in the DSEIS, "AMHS Mainline Operating Costs," the methodology and results for the Comparison of Vessel Operating Days Chart appear to be incorrect. The chart lists a total of 40.9 Mainline Days for the number of days the mainliners operate in North Lynn Canal. It is difficult to see how this value was derived considering that under alternatives that use mainline ferries as a transportation component, the document states that two mainliners will run in summer and one in winter.

Summer is defined as approximately 22 weeks (44 mainline sailings) and winter is approximately 30 weeks (30 mainline sailings). These combine for a total of 74 mainline sailings a year. Even if you discount the running time in North Lynn Canal as not a full day (24 hours) and assume a run time of 18 hours (75 percent of a day), calculations render an operating days total of 55.5 days: 74 sailings x 0.75 days = 55.5 days. This is significantly higher than the 40.9 days listed in the DSEIS. This is important, as this number is used to calculate crew and fuel costs for the mainline component of a majority of the alternatives. This problem was brought to the attention of Gary Hogins, Project Manager. In an email exchange on November 3, 2014 he acknowledged that the document is in error and corrections would need to be made.

RESPONSE: DOT&PF and FHWA have examined this alternative and have determined that it is not reasonable for the following reasons:

- First, the Day Boat ACF cannot make a daily Auke Bay-Skagway run and meet United States Coast Guard (USCG) work/rest requirements. Without modification of the vessel or the loading and unloading facility at the Skagway Ferry Terminal to decrease the Day Boat ACF operating day, it would not be compliant with USCG requirements.
- Second, discontinuing mainline ferry service within Lynn Canal creates capacity problems at Auke Bay. During summer, on the 2 days per week that the mainliner sails, the amount of transferring traffic plus local traffic demand to/from Skagway would typically be greater than the capacity of the Auke Bay-Skagway Day Boat ACF proposed in Alternative 1B Optimized.
- Third, there is insufficient berth space and vehicle staging areas in Auke Bay to have the mainline vessel in port while accommodating all transferring vehicles, thus resulting in vessel and vehicle congestion and delays. To fully clear northbound and southbound connecting travelers onto the mainline vessel, it needs to remain docked in Auke Bay long enough for the two Day Boat ACFs and the *M/V Malaspina* to come and go. Moreover, the staging area at Auke Bay is insufficient to accommodate all the disembarking and embarking vehicles. The space is limited and was not designed or sized to handle the transfers of the volumes expected. A detailed analysis and evaluation of Alternative 1B Optimized can be found in Appendix II.

For the Draft SEIS, the data used to calculate the mainliner operation cost in Lynn Canal was incomplete, resulting in the operation cost being understated. For the Final SEIS, the methodology for estimating mainliner operation cost was modified and is described in Attachment A of Appendix GG –*Marine Segments Technical Report*.

This chart from the 2012 Annual AMHS Fiscal Report shows that fuel and crew comprise more than 87% of total costs for the ferry system.

# Alternative 5: The All Alaska Class Ferry Alternative

November 18 2014

*Skagway Marine Access Commission*  
*Box 1076*  
*Skagway, Alaska 99840*

An improved marine alternative proposed by the Skagway Marine Access Commission as comments on the Juneau Access Improvements Project Draft Supplemental Impact Statement.

## Alternative 5: The All Alaska Class Alternative

The new Alaska Class Ferry (ACF) Day Boat design creates the opportunity for a paradigm shift in the efficient use of labor for marine transportation in Lynn Canal.

Mainliners with their large crews and 24/7 crewing requirements, are very expensive to operate whether you calculate by hour or by mile. The Southeast Alaska Transportation Plan (SATP) calls for retiring one or more of the aging mainline vessels in the next few years. Plans for the new ACF day boat will go a long way toward creating a more efficient transportation model for our region.

According to the Alaska Marine Highway System 2013 Financial Report, crew and fuel costs comprise 87% of ferry operational costs: crew costs make up roughly 66% of the operating expenditures and fuel amounts to 21%. Vessel crewing provides the biggest opportunity for cost savings. It is in its crewing requirements that the Alaska Class Ferry (ACF) Day Boat realizes significant efficiencies compared to other vessels in the region.

According to the Day Boat ACF Design Study Report, prepared for the Alaska Marine Highway System by Elliott Bay Design Group, the new ACF boats will require a crew of nine for operating in Lynn Canal. In comparison, the Malaspina, which has traditionally sailed the Lynn Canal day boat route, requires a crew of 51. In other words, the ACF will require less than 1/5th the number of crew members that the Malaspina requires. When you combine the crew savings with the efficiencies achieved through modern engine and vessel design technologies, the savings are significant on a cost per mile basis.

In the Draft Supplemental Environmental Impact Statement for Juneau Access (DSEIS), these new developments in vessel design, have been incorporated into the marine alternatives as “existing assets.” However upon further evaluation of these marine alternatives we found them to be burdened unnecessarily by the inclusion of mainline vessels.

Alternative 5 calls for construction of a third ACF and the retirement of one aging mainliner. Our analysis shows that the traffic demand in Lynn Canal can be satisfied at a much lower operation cost per mile through the addition of a third ACF. The following are the key components of the All Alaska Class Alternative:

Acquiring a third ACF

Eliminating mainliner service north of Auke Bay

Implementing all capital improvements as outlined under Marine Alternative 4C:

- Auke Bay expanded to include new double stern berth
- Skagway expanded to include a new end berth
- New conventional monohull shuttle ferry constructed to operate between Haines and Skagway.

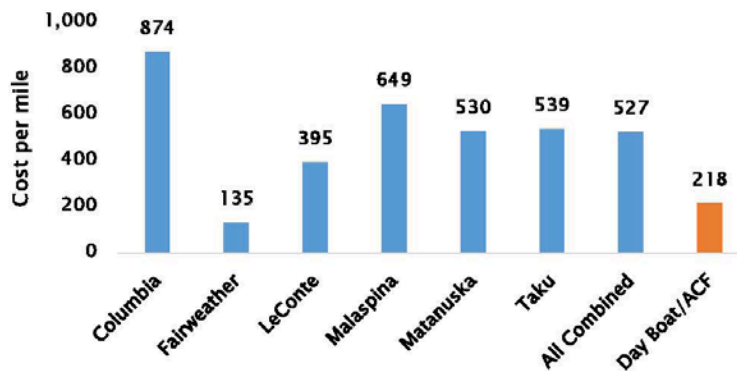

## Savings

The construction cost of a new ACF day boat (approximately \$60 million) will be offset by the costs of road and terminal construction associated with other alternatives. Operating costs of this alternative will be offset by the savings associated with suspension of mainline service in Lynn Canal. The savings realized by the retirement of the aging mainliner are not quantified in this analysis but will be significant to AMHS and the State of Alaska.

The following quote and chart are excerpted from the North Lynn Canal Ferry Service Analysis prepared for the Municipality of Skagway by the McDowell Group in June 2014.

*Deployment of the new AMHS day boat/ACF should result in an overall reduction in the cost of providing ferry service in Lynn Canal. Day boat/ACF costs are expected to average \$173 per-mile for Juneau-Haines service and \$336 per-mile for the Haines-Skagway service. In FY2012, all vessels serving Lynn Canal combined operated at an average per-mile cost of \$527. The Malaspina (providing 40 percent of all Lynn Canal service miles in FY2012) operated at a per-mile cost of \$649.*

**Figure 2. AMHS North Lynn Canal Vessel Per-Mile Costs, FY 2012  
And anticipated Day Boat ACF Per-Mile Costs**

### **Proposed Summer Schedule and Routes**

- ACF One homeported in Haines and sails roundtrip from Haines to Auke Bay once a day seven days per week
- ACF Two homeported in Skagway and sails roundtrip from Skagway to Auke Bay once a day seven days per week
- ACF Three homeported in Auke Bay and sails roundtrip to Haines four days per week and Skagway three days per week.

This results in 11 roundtrips between Auke bay and Haines each week and ten sailings between Auke Bay and Skagway each week.

- Haines-Skagway Shuttle homeported in Haines and sails roundtrip to Skagway twice a day seven days a week

### **Proposed Winter Schedule and Routes**

- ACF One is homeported in Auke Bay and sails roundtrip to Haines five days a week.
- ACF Two is homeported in Haines and sails to Skagway twice a day 5 days a week

#### **Transit Times**

The transit times for these routes and schedules are based on the transit times estimated for the projected ACF Day boat schedules proposed in Alternative 4C (Conventional Monohull out of Auke Bay) from the JAI Marine Segments Technical Report (Attachment C). See Exhibit B.

#### **Capacity**

The addition of a third ACF as outlined in Alternative 5 would produce an overall increase in summer and winter capacity between Auke Bay, Haines and Skagway compared to 4C. Alternative 5 would significantly increase the frequency of sailings between Auke Bay, Haines and Skagway.

## **Alternative 5 Schedules**

Notional schedules are developed to verify number of round trips and determine crew times. Schedule start times are arbitrary. Notional schedules are not intended to show route connections or homeport locations. Final schedules and homeport locations will be based on system implementation.

## Summer Capacity/Demand Analysis and Comparison of Alternatives 4C<sup>1</sup> and 5

Purpose and Need Factors	4C	5
ABY / SGY		
Forecasted Summer Demand between Auke Bay and Skagway (vehicles per day)	75	75
Summer Ferry Link Capacity between Auke Bay and Skagway (vehicles per day)	106	151
Number of Ferry Round trips/Week Auke Bay to Skagway (summer)	7	10 <sup>2,3</sup>
ABY / HNS		
Forecasted Summer Demand between Auke Bay and Haines (vehicles per day)	95	95
Summer Ferry Link Capacity between Auke Bay and Haines (vehicles per day)	106 (63) <sup>4</sup>	166
Number of Ferry Round trips/Week Auke Bay to Haines (summer)	9 <sup>5</sup>	11
HNS / SGY		
Forecasted Summer Demand between Haines and Skagway (vehicles per day)	53	53
Summer Ferry Link Capacity between Haines and Skagway (vehicles per day)	72 (63) <sup>4</sup>	72
Number of Ferry Round trips/Week Haines to Skagway (summer)	15 <sup>5</sup>	14

<sup>1</sup>Data derived from Appendix AA and Appendix GG, Juneau Access DSEIS, Marine Segments Technical Report.

<sup>2</sup>An additional four trips per week could be made ABY-SGY by taking the Day Boat ACF between Auke Bay and Haines and transferring in HNS to the shuttle.

<sup>3</sup>An additional four trips per week could be made SGY-ABY by taking the Shuttle southbound (daily) or transferring in HNS to the ACF

<sup>4</sup>Mainliner capacity

<sup>5</sup>includes two mainliners

## Cost Comparison

The table below compares estimated yearly fuel and crew costs under AKDOT's Alternative 4C and our proposal, Alternative 5. As the table shows, Alternative 5 generates an estimated annual savings of more than \$1 million.

	Alternative 4C	Alternative 5	Savings with Alternative 5
Fuel costs	\$5.8	\$6.6	(\$0.8)
Crew costs	\$10.1	\$8.2	\$1.9
<b>Total</b>	<b>\$15.9</b>	<b>\$14.8</b>	<b>\$1.1</b>

Figures for Alternative 4C are from JAI DSEIS Appendix GG. Calculations for Alternative 5 can be found in Exhibit A.

## ADVANTAGES OF AN ALL ALASKA CLASS ALTERNATIVE

Alternative 5 proposes the exclusive use of Alaska Class Ferry (ACF) dayboats in Lynn Canal. Construction of two ACF dayboats is currently underway at the Ketchikan Boat Yard. The proposal would require the acquisition of a third vessel by the Alaska Marine Highway System (AMHS). All northbound AMHS traffic would disembark in Auke Bay and board the smaller more efficient ferries bound for Haines and Skagway.

Lynn Canal route length is ideally suited to dayboat service; travelers on 4 ½ to 5 ½ hour sailings do not require the staterooms and other amenities needed for longer voyages. Each summer since 2008, the AMHS has used the mainliner MV Malaspina to provide day boat service between Juneau, Skagway and Haines. The ACF dayboat requires less than 1/5<sup>th</sup> the number of crew members that the Malaspina requires. These crew savings combined with the efficiencies achieved through modern design make the ACF dayboat a better fit for Lynn Canal.

The elimination of expensive mainliners from Lynn Canal allows the AMHS to redeploy those ships and/or retire an aging vessel. This has the potential to increase service in the Northern Panhandle at reduced cost. Other advantages of the three ACF dayboat system are:

- Can be scaled to the demand in Lynn Canal and in the region
- Provides multiple and flexible deployment options
- Builds redundancy into the Marine Highway system
- Provides direct access to Juneau from Skagway (10 sailings a week in the summer)
- Maximizes service in Lynn Canal and exceeds predicted demand

Unlike Juneau Access, this proposal is not Juneau-centric. The utility of these vessels allows them to serve any route in Southeast that can best be optimized by the ACF dayboat concept. This benefits not only the communities of Lynn Canal but the entire AMHS and southeast region as a whole. Unlike a road, the ACF is transportation infrastructure that can be deployed in any direction where the traffic demand exists. Flexible deployment would allow an ACF homeported in Auke Bay to serve Skagway/Haines, Gustavus, Angoon/Hoonah, and Tenakee on successive days, tailoring the service to the demand. The fact that these boats can be built in Ketchikan provides additional economic benefit to the region.

RESPONSE: DOT&PF and FHWA have examined this alternative and have determined that it is a variation of existing alternatives and therefore would be an unnecessary addition to the range of reasonable alternatives. It would attract fewer trips than Alternative 1B, provide similar capacity to Haines (and less to Skagway), and would have similar travel time as other alternatives studied (No Action, 1B, and 4C). It fits within the range of capital and operational costs (not the cheapest and not the most expensive of the ferry options). In short, it is not unique enough to constitute something outside the range of alternatives already studied. Further, sufficient information has been generated to confirm it is inferior to other alternatives already in the SEIS.

Additionally, during summer, discontinuing mainline ferry service within Lynn Canal could create capacity issues that may prevent some travelers from reaching their final destination via a direct ferry connection. Vehicles traveling through Juneau in either direction on mainline vessels would be required to transfer from the Lynn Canal vessels to the mainline vessel at Auke Bay. Mainline vessels hold between 88 and 134 vehicles. Depending on how many vehicles were passing through Juneau, there could be insufficient capacity on the days the mainliner arrives when local traffic would be added to the demand generated by these mainline vessels. Some Lynn Canal travelers would likely have to use the Haines/Skagway shuttle and travel via Haines or Skagway to reach their final destination, which increases their travel time and potentially their costs (if they need to stay overnight).

A detailed analysis of SMAC's Alternative 5 is found in Appendix II, *Alternative 1B Optimized and Alternative 5 Evaluation*.

In 1970, in an article about the Alaska Marine Highway System, Juneau economist George Rogers wrote: “The National Resources Committee reviewing Alaska’s natural resources development problems and potentials in 1937 stressed the importance of development of a highly flexible transportation system that would not involve heavy capital investment in fixed routes and would be able to overcome or go around the formidable land barriers separating Alaska’s several regions...” Alaska Review of Business and Economic Conditions, Vol. VII, No. 5

# Exhibit A: Alternative 5 Crew and Fuel Costs

## Alternative 5 Crew and Fuel Costs

Alternative 5 is comprised of 4 vessels: ACF1 (HNS-ABY-HNS) 53 ASV

ACF2 (SGY-ABY-SGY) 53 ASV

ACF3 (4 days ABY-HNS-ABY and 3 days ABY-SGY-ABY) 53 ASV SHUTTLE (HNS-SGY-HNS) 18 ASV

### ACF1

**Summer Season: 153 Days (153 Operating Days) Crew cost:**

Day crew: \$698.74/hr Night crew: \$156.55/hr Day Crew:

$153 \text{ days} \div 7 \text{ days/week} \times 84 \text{ hr/wk} = 1836 \text{ hrs/season} \times \$698.74 = \$1,282,881$

Night crew:

$153 \text{ days} \div 7 \text{ days/week} \times 84 \text{ hr/wk} = 1836 \text{ hrs / season} \times \$156.55 = \$287,418$

Summer Crew cost = **\$1,570,299**

### **Fuel cost:**

ACF Fuel Consumption: 289.48 gal/hr

HNS-ABY-HNS time underway per week: 66.73 hr

$153 \text{ op/days} \div 7 \text{ days/week} \times 66.73 \text{ hrs/week} = 1458.60 \text{ hrs/season} \times \$3.38 / \text{gal} \times 289.48 = \mathbf{\$1,427,156}$

<sup>1)</sup> Transit time = Time Underway + Load + Unload

### AUK-SGY-AUK Daily Schedules

#### Model Schedule

Notional schedules are developed to verify number of round trips and determine crew times. Schedule start times are arbitrary. Notional schedules are not intended to show route connections or homeport locations. Final schedules and homeport locations will be based on system implementation.

Summer					
Vessel 1	1st Dep	6:00 AM	1st Load	5:45 AM	
Total Crew Time	Circuit No.	Depart Auke Bay	Arrive Skagway	Depart Skagway	Arrive Auke Bay
11.63	1	6:00 AM	11:18 AM	11:50 AM	5:08 PM

Winter					
Vessel 1	1st Dep	6:00 AM	1st Load	5:45 AM	
Total Crew Time	Circuit No.	Depart Auke Bay	Arrive Skagway	Depart Skagway	Arrive Auke Bay
11.63	1	6:00 AM	11:18 AM	11:50 AM	5:08 PM

<sup>2)</sup> This schedule requires both reduced startup and shutdown times and loading/unloading during startup/shutdown. Alternatively, the vessel speed can be increased to 16.5 knots resulting in increased fuel consumption and costs.

\*“Route Operation and Schedule Model” in Attachment C of the Appendix GG Marine Segments Technical Report written by Coastwise Corporation Naval Architects Marine Engineers.

**RE: Comments on Juneau Access Improvements Project Draft Supplemental  
Environmental Impact Statement**

Dear Ms. Holman and Mr. Haugh:

I have been asked by Jan Wrentmore, President of the Skagway Marine Access Commission, to address the Draft Supplemental Environmental Impact Statement (DSEIS) on the Juneau Access Improvements Project (JAI Project).

- A. It appears that problems with funding prevent FHWA from making a reasoned decision to approve a final SEIS for which the preferred alternative would include a road from the Glacier Highway to Katzehin.**

The 2012-2015 Statewide Transportation Improvement Program (STIP) describes the highway portion of the Preferred Alternative 2B of the JAI Project as follows:

Extend Glacier Highway/State Route 7 northward from its current terminus to the north side of the Katzehin River delta, in a series of stages, per the preferred

alternative in the Final Environmental Impact Statement (EIS) and construct terminal near Katzehin River.

The STIP states that this portion of the preferred alternative would cost approximately:

\$152 million in FFY2014, of which nearly \$105 million would be "equity bonus" funds;

\$58 million in FFY2015, of which nearly \$53 million would be funds from the National Highway Performance Program (NHPP); and

\$300 million after 2015, for which the sources are unidentified.

## 1. Equity Bonus funds appear to be no longer available.

Equity bonus funds were available under the former 23 U.S.C. § 105. It was repealed by MAP-21.

The last year in which equity bonus funds were made available appears to have been 2009.<sup>1</sup> Such funds remain available for four years.<sup>2</sup>

Therefore, equity bonus funds made available in FFY2009 had to be obligated by FFY2013 or FY2014. The current federal fiscal year is FFY2015. The equity bonus funds of approximately \$105 million, toward the planned expenditure 152 million in FFY2014, appear to be no longer available.

RESPONSE: The 2011 and 2013 Equity Bonus Funding identified in the Draft SEIS was available at the time the Draft SEIS was released, but now is no longer available to this project. Those funds had to be used within a certain period or they would be lost. Those funds have been used on other projects. If a build alternative is selected in the Record of Decision, the Equity Bonus Funding would be replaced with National Highway Performance Program (NHPP) funding/State match.

<sup>1</sup> FHWA, "A Guide to Federal-Aid Programs and Projects," pp. 54-55 in unpaginated PDF version, available at <http://www.fhwa.dot.gov/federalaid/projects.pdf>.

<sup>2</sup>Id.

## 2. NHPP funds are not available for a route not on the NHS.

According to the STIP, nearly \$53 million of the \$58 million in FFY2015 would be from the National Highway Performance Program (NHPP) established by section 1106 in MAP-21 and codified as 23 U.S.C. § 119. It provides that NHPP funds may only be used on projects on the National Highway System.

The road route from Auke Bay to Katzehin is not currently on the National Highway System. Therefore, the route is not currently eligible for the \$53 million in NHPP funds.

In order for the road route to become eligible, it would have to be made part of the National Highway System. In order for that to occur, both the State and FHWA must first comply with 23 U.S.C. § 103(b)(3). It governs the modification of the current National Highway System. It provides:

### (3) Modifications to NHS. -

(A) In general. - The Secretary may make any modification, including any modification consisting of a connector to a major intermodal terminal, to the National Highway System that is proposed by a State if the Secretary determines that the modification -

(i) meets the criteria established for the National Highway System under this title after the date of enactment of the MAP-21 ; and

(ii) enhances the national transportation characteristics of the National Highway System.

### (B) Cooperation. -

(i) In general. - In proposing a modification under this paragraph, a State shall cooperate with local and regional officials.

(ii) Urbanized areas. - In an urbanized area, the local officials shall act through the metropolitan planning organization designated for the area under section 134.

Under 23 U.S.C. § 103(b)(3), the State must first cooperate with local and regional officials, including those in Skagway who are opposed to the preferred alternative and this route. The State must do so *before* it proposes to the Secretary of Transportation that the route be added as a modification to the existing National Highway System.

Second, in order to determine whether such a proposed modification should be accepted, the Secretary of Transportation must determine whether the State's proposed modification meets the criteria for the National Highway System and enhances the national transportation characteristics of the National Highway System. Obviously, because the State has yet to propose such a modification, the Secretary and FHWA have yet to decide upon such a modification.

Nothing in the DSEIS indicates that the State has commenced cooperation with local or regional officials to propose that the route between Auke Bay and Katzechin be added to the National Highway System. Until such a proposal is made and approved by FHWA, it is without authority to obligate NHPP funds for the preferred alternative. Therefore, FHWA cannot reasonably approve a final SEIS that depends on using NHPP funds for the route until both the State and FHWA have complied with 23 U.S.C. § 103(b)(3).

RESPONSE: This project can use NHPP dollars because:

- 1) The current surface transportation system in northern Lynn Canal is eligible for NHPP funding. New roads as proposed under Alternatives 2B and 3 can be designated as NHS intermodal connectors and are eligible to receive NHPP funds. Modifications to intermodal connectors requires NHS modification. Approval of a modification to the NHS system is independent of an FHWA Final EIS/Record of Decision. An NHS modification would occur prior to requesting construction funding.
- 2) In the process of modifying the NHS system, DOT&PF would cooperate with local community officials.
- 3) DOT&PF plans to submit an asset management plan to FHWA in 2018.

**3. Because the STIP does not identify a source of funds for the \$ 300 million needed after 2015, the road appears to be funded for construction only to the Kensington Mine. The road therefore does not meet the criteria at 23 U.S.C. § 103(b)(1) for inclusion in the National Highway System and contravenes 23U.S.C. § 101(d).**

As said above, the STIP does not identify any source of funds for the \$300 million needed after 2015 to complete the road to Katzechin. Furthermore, I understand from those opposed to the project assert that the funds for FFY2014 and FFY2015 would result in construction of the road only to Kensington Mine, rather than to Katzechin.

If so, the road would not meet the criteria in 23 U.S.C. § 103(b)(1) for inclusion in the National Highway System. These criteria, in 23 U.S.C. § 103(b)(1), are that the National Highway System consists of the highway routes and connections to transportation facilities that shall -

- (A) serve major population centers, international border crossings, ports, airports, public transportation facilities, and other intermodal transportation facilities and other major travel destinations;
- (B) meet national defense requirements; and
- (C) serve interstate and interregional travel and commerce.

Here, based on the funds identified so far in the STIP, the road would simply serve Kensington Mine and could not meet the criteria for inclusion in the National Highway System.

As a partially-funded project, it amounts to expending Highway Trust Funds for Kensington Mine. Doing so is barred by 23 U.S.C. § 101 (d). It provides in part that "No funds authorized to be appropriated from the Highway Trust Fund shall be expended . . . on behalf of any . . . instrumentality other than the Federal Highway Administration" unless funds for such expenditure are identified and included as a line item in an appropriation Act. No appropriation Act has included expenditure of such funds to build a road to Kensington Mine.

RESPONSE: Currently, there are no funds shown in the Statewide Transportation Improvement Program (STIP), since the preferred alternative has been changed to Alternative 1 - No Action Alternative. However, during the period between the release of the 2014 Draft SEIS and the change of the preferred alternative to No Action, the completion of the design phase for Alternative 2B was shown in the 2016-2019 STIP. The funding for construction was after FFY 2019 because the initial construction stage would occur after 2019.

A build alternative would be constructed in stages, which is not segmentation. Showing the intent of fully funding the project in the years beyond the current STIP shows intent by DOT&PF to fund the project in its entirety and is accepted by FHWA. (See <http://dot.alaska.gov/stwdplng/cip/stip/index.shtml> for full details on the STIP.) The suggestion that FHWA or DOT&PF intend to build a road to Kensington Mine is unfounded and not supported by any information in the Draft SEIS.

**4. These funding issues render any decision to approve the preferred alternative as arbitrary, capricious and an abuse of discretion for purposes of implementing NEPA, and for subsequently implementing 23 U.S.C. § 106.**

These funding issues are fatal to approval of a final SEIS having Alternative 2B, containing the road to Katzehin, as the preferred alternative. Approving a preferred alternative that cannot be funded at this time simply means that the SEIS will go stale and result in additional NEPA analysis if the State ever decides to pursue the project again. Therefore, approving it would be arbitrary, capricious and an abuse of discretion. Moreover, that is also the case with respect to future implementation of 23 U.S.C. § 106(a). It requires the Secretary of Transportation to approve plans, specifications, and estimates for each proposed project. Approval of the preferred alternative will lead to subsequent decisions under 23 U.S.C. § 106 to approve, or not, such plans, specifications, and estimates. But it is already obvious that the funds for the entire project are not available. So, for purposes of 23 U.S.C. § 106(a), approval of the preferred alternative is again arbitrary, capricious and an abuse of discretion, and would result at best in completion of part of the project, to Kensington Mine. This would amount to unlawful segmentation of the project, because it would not meet the criteria for inclusion on the National Highway System and would not have independent utility for purpose of that System.

Furthermore, because of the funding issues, it will be impossible for the State to comply with 23 U.S.C. § 106(h). It applies to a recipient of Federal financial assistance for a project with an estimated total cost of \$500,000,000 or more. It requires the recipient to submit to the Secretary for each such project a "project management plan," and (B) "an annual financial plan, including a phasing plan when applicable."

The project management plan shall document: (A) the procedures and processes that are in effect to provide timely information to the project decision-makers to effectively manage the scope, costs, schedules, and quality of, and the Federal requirements applicable to, the project; and (B) the role of the agency leadership and management team in the delivery of the project.

The dubious funding means that the scope, costs, schedules and quality of the project are equally dubious.

The requirement for a financial plan goes directly to the dubious funding. Under the statute, the financial plan must be "based on detailed estimates of the cost to complete the project," and must provide for "annual submission of updates to the Secretary that are based on reasonable assumptions, as determined by the Secretary, of future increases in the cost to complete the project." The financial plan may include "a phasing plan" that identifies fundable "phases that will address the purpose and the need of the project in the short term in the event there are insufficient financial resources to complete the entire project." These requirements cannot be met if the funds are not available. In particular, the purpose and need cannot be met if the funds are available to build the route at best to Kensington Mine.

Finally, 23 U.S.C. § 106(h) provides that if a phasing plan is adopted for a project, then the project shall be deemed to satisfy the fiscal constraint requirements in 23 U.S.C. § 135, under which the STIP is prepared. This statute, 23 U.S.C. § 106(h), demonstrates that Congress considered the requirements for fiscal constraint to apply to *each project* in a STIP, and not only at the overall level of approval of a STIP under 23 U.S.C. § 135. Because the purpose and need cannot for this project be met by funding a partial project to Kensington Mine, and because even the STIP concedes that the source of the funds after 2015 cannot be identified, it follows that the requirement for fiscal constraint as applied to this project cannot be met. Therefore, FHWA should reject the preferred alternative because it cannot be said to be fiscally constrained.

RESPONSE: Approval of any of the alternatives is not arbitrary, capricious, or an abuse of discretion. A build alternative selected in the Record of Decision would be fully funded and completely built. There is no alternative that only goes to Kensington Mine. This project has been advanced by FHWA, as evidenced by a 2006 Record of Decision, continued efforts in the SEIS, and its approval of the STIP (consistent with 23 USC 135(g)). Additionally, it is common to have phased construction on large projects. Should an alternative be selected with an estimated project cost over \$500 million, it is considered a major project per 23 USC 106(h) and DOT&PF would be required to prepare a project management plan and financial plan for FHWA approval after the Final SEIS is completed.

- B. In deciding whether to approve the preferred alternative that would include a road from the Glacier Highway to Katzehin, FHWA should determine under 23 U.S.C. § 109 whether the route is safe.

The Skagway Marine Access Commission has submitted a document titled "How the Juneau Road Fails to Meet State and Federal Highway Safety Goals: An Analysis of Safety Issues in the Juneau Access Project DSEIS" (November 2014). It asserts that 43 avalanche

chutes and about 100 geologic hazards, such as rock falls and land slide areas, have been identified along the route. That document asserts that the route would create safety issues similar to those along the Seward Highway in the area of Turnagain Arm.

Under 23 U.S.C. § 109, the Secretary of Transportation's approval of plans for construction of a highway is conditioned upon a determination that the facility will adequately serve the existing and planned future traffic of the highway in a manner that is "conducive to safety, durability, and economy of maintenance." This statute requires the Secretary to make the determination as to the safety of the proposed highway *before* granting approval under 23 U.S.C. § 109. *D.C. Federation of Civic Associations v. Volpe*, 459 F.2d 1231, 1242 (D.C. Cir 1972); see also 49 U.S.C. § 13101 (federal transportation policy is to promote "safe, adequate, economical, and efficient transportation").

The safety determination should be in the context of comparing the preferred alternative to the existing facilities. Moreover, the time for that safety determination, or at least a preliminary determination, is when FHWA is faced with whether to approve the preferred alternative. The decisions about safety and a preferred alternative merge, at least to the extent that it makes no sense to do otherwise by approving the preferred alternative and later finding it unsafe after the State and FHWA have spent additional public funds further designing the project.

RESPONSE: All roads constructed under State and federal authority must follow State and federal design procedures and standards that have been adopted/established to support safe travel. FHWA will ensure that any build alternative selected for construction fulfills the standards identified in 23 USC 109.

- C. In deciding whether to approve the preferred alternative, FHWA should determine under 49 U.S.C. § 13101 whether the route promotes "safe, adequate, economical, and efficient transportation".

In the DSEIS, Appendix FF, titled "User Benefit, Life-cycle Cost, and Total Project Life Cost Analyses," shows that none of the action alternatives are cost effective, and none created net positive benefits.<sup>3</sup> In light of such findings in the DSEIS, FHWA must implement the policy at 49 U.S.C. § 13101 by finding that the preferred alternative does not comply with the federal policy of promoting "safe, adequate, economical, and efficient transportation".

<sup>3</sup> See also comments submitted by Gregg Erickson, of Erickson & Associates, economic consultants.

RESPONSE: The cited 49 USC 13101 falls under Part B, "Motor Carriers, Water Carriers, Brokers, and Freight Forwarders" and is about overseeing transportation "carriers" rather than overseeing the roads that carriers may use. Regardless, it is DOT&PF and FHWA's intent in building and maintaining transportation infrastructure to promote safe, adequate, economical, and efficient transportation. Transportation in Southeast Alaska is heavily subsidized and may not 'pencil out' with a net benefit, because of high costs to operate ferries as well as roads for a relatively small population base. Alternative 2B would provide for more use at a lower unit cost

than the existing service. Selecting such an alternative would not violate the stated FHWA policy, or any FHWA policy.

The purpose of the economic efficiency and cost-effectiveness analysis conducted as part of the Draft SEIS was to determine which alternatives serve the largest number of travelers at the lowest possible cost.

A number of measurements are important in the selection of a preferred alternative. For example, the total number of travelers served is important. Alternative 2B serves substantially more travelers than any of the other alternatives (9.6 million vehicles versus 1.4 to 3.4 million vehicles for the marine alternatives). The cost to serve each traveler is another important measurement (Alternative 2B is lowest in terms of per user cost).

The fact that all benefit cost ratios calculated in Appendix FF, *Use Benefit, Life-cycle Cost, and Total Project Cost Analyses*, are less than 1 does not mean investment in better infrastructure is imprudent, it primarily means that transportation infrastructure costs are very high in Alaska, where populations are generally small, distances are long, terrain is often challenging, and sea conditions are often difficult.

## Conclusion

The proposed Juneau Access project has generated endless controversy. That controversy has gone on long enough. It needs to end now.

Neither the State nor Highway Trust Fund has the financial resources to entertain such expensive and wasteful projects. If the State under the new governor and new leadership at ADOT&TF cannot end this project now, then FHWA should do so. It has many statutory authorities, under NEPA and under Titles 23 and 49 of the U.S. Code, that provide the legal basis for ending this project.

Sincerely,

Geoffrey A. Parker

P.O. Box 21648 Juneau, AK 99802

From: Tongass Group of the Sierra Club (TGSC)

Mark Rorick Chair

Subject: Comments on Juneau Access Draft SEIS.

**Summary:** TGSC (used to be the Juneau Group of Sierra Club) has been involved with the Juneau Access projects for more than 20 years. From the first proposed project, a west Lynn Canal road that would come down from Haines and connect to Juneau and Admiralty Island, to what DOT&PF is proposing now. TGSC is a sub-entity of the National Sierra Club and these comments represent the National Sierra Club and the AK Chapter of the Sierra Club.

These comments are here because the 2006 FEIS failed "to examine a viable and reasonable alternative to the proposed project," violating the National Environmental Policy Act (NEPA), which requires agencies to "rigorously explore and objectively evaluate all reasonable alternatives." Alternative 1b does not follow the court's ordered mandate to rigorously explore all reasonable alternatives, and is not designed to meet the stated purpose and need.

**RESPONSE:** Alternative 1B complies with NEPA and the Court's order. The Court's order was to develop an alternative that would improve surface transportation in Lynn Canal with existing Alaska Marine Highway System (AMHS) assets. Alternative 1B was carefully developed and analyzed in strict accordance with this order. DOT&PF and AMHS staff developed a new alternative based on direction from the Court, shared a draft of that alternative with the public during a new scoping effort, took input on the new alternative, and revised that alternative based on the scoping comments received. The new alternative took into account changes that had occurred to the "existing assets" in the AMHS fleet since the 2006 Record of Decision (ROD), the capabilities of the vessels in the fleet, and the needs and mission of

the fleet to the numerous communities served by AMHS. DOT&PF and FHWA fully disclosed the development and evaluation process in the Draft Supplemental Environmental Impact Statement (SEIS). Appendix CC, *Development of Alternative 1B – Enhanced Service with Existing Alaska Marine Highway System (AMHS) Assets*, of the Draft SEIS described the efforts undertaken to develop Alternative 1B and documented the data and analysis relied on to create as reasonable an alternative as possible for solving the transportation problems in the corridor using only existing assets.

Alternative 1B incorporated the following considerations:

- Existing AMHS assets reasonably available and feasible for use in Lynn Canal
- Programmed AMHS assets (decisions made by AMHS independent of this project that made new day boats available in the fleet)
- Enhancements that could be employed, as suggested by the Plaintiffs, that do not involve substantial initial capital investments

The resulting alternative, Alternative 1B, was developed and rigorously analyzed to the same level as all other build alternatives in the Draft SEIS. DOT&PF and FHWA took comments on Alternative 1B during the development of and public review period for the Draft SEIS, and have addressed those comments in the Final SEIS, including updating and refining it for current data.

Revised Appendix CC of the Final SEIS describes the development of Alternative 1B.

TGSC supports the no action alternative, a proposed alternative that uses Alaska Class Ferries (ACF) home based in Auke Bay and the M/V Malaspina home based in Haines (Alternative 1b optimized), and a proposed Alternative 5 using three ACFs and removing one mainliner from use in the Lynn Canal corridor.

## **Issues**

Purpose and Need: Improved safety has been left out as one of the purposes and needs of the project and as a criterion for decision making it is nonexistence.

This biases the selection of DOT&PF's preferred alternative to the Alt 2b and Alt 3 roads. Improved safety is a criterion that needs to be analyzed and compared in all alternatives so the public can be informed on the issue.

Safety is one of the priorities put out by AASHTO for the construction of federal highways, which DOT&PF is supposed to follow. The AMHS has a record of no deaths in the Lynn Canal corridor and if safety was part of the purpose and need of the project the marine alternatives would rank as the best for safety.

RESPONSE: Safety is included in the purpose and need statement for a project only if there is a demonstrable safety problem on the transportation link being considered. An example would be when there is a higher number of accidents than the state average for similar transportation facilities. Safety is not a problem with the current transportation system; therefore, it is not a stated purpose for the proposed project. All roads constructed under State and federal authority must follow State and federal design procedures and standards that have been adopted/established to support safe travel. Therefore, all of the project alternatives are safe and reliable.

Mission Statement DOT Commissioner Malcolm Menzies. Our accomplishments are measured by:

Reduced injuries, fatalities & property damage.

Safe DOT&PF operations.

*Our missions is accomplished by:*

STATEWIDE DOT EMPLOYEES	SE REGION DOT EMPLOYEES
Average of 3000 employees	245 in SE Region (8% of total) plus 139 in HQ & 120 in AMHS operation
Alaska encompasses a geographic area of 656,425 sq. miles (570,374 sq. miles are land, 86,051 sq. miles are water)	42,000 sq. miles in SE Region (6%)
2005 Alaska's Population is 663,661	S.E. Alaska's population is 70,822 (10.7%)

*Our Mission accomplishments are measured by:*

- Reduced injuries, fatalities & property damage
- Safe DOT/PF operations
- Improved mobility of people and goods
- Increased private investment
- Provide the assets and facilities to enable delivery of State services.

DOT Commissioner Luiken said in a Joint Transportation Committee DOT hearing that the "Four E's of safety in all DOT projects, be them construction or maintenance, are "education, enforcement, **engineering, and emergency services.**" And that one of the four goals stated for the 2008 Southeast Alaska Transportation Plan is to "maintain or improve modal safety. DOT&PF has narrowed the Purpose and Need of the Juneau Access improvement Project by deleting safety, thereby producing a result in favor of road alternatives. There is no justification for deleting safety from the DSEIS's P&N and consequently it is arbitrary and capricious. Safety issues about the road alternatives are discussed in the safety section.

RESPONSE: Safety was not part of the 2006 EIS Purpose and Need and was, therefore, not “deleted” from the 2014 Draft SEIS. Not including safety in the project’s purpose and need is not “arbitrary and capricious.” As was previously discussed, safety is included in the purpose and need statement for a project only if there is a demonstrable safety problem on the transportation link being considered. An example would be when there is a higher number of accidents than the state average for similar transportation links. Safety is not a problem with the current transportation system; therefore, it is not a stated purpose and need for this project.

The Draft SEIS and the *Socioeconomic Effects Technical Report* (Appendix EE) presented information regarding public safety for each project alternative. Information on traffic related accidents and fatalities for the road alternatives is included in Sections 4.3.7 and 4.4.7 of the Draft SEIS and has been updated for the Final SEIS.

**Travel Demand:** The SDEIS says the road to Katzehin/Haines/Skagway will generate a travel demand that does not exist now and that DOT&PF's travel-use forecast is based on a thirty six year lifetime model. The farther an estimate is projected through time the more it becomes un-liable for predicting travel demand. DOT&PF's estimated demand model is missing any quantified measures of the uncertainty that are inherent in the model. It is just noted as a huge uncertainty. The travel demand forecast numbers are an assumption that is part of the base for calculating the comparative cost/benefit of the projects alternatives, how many fatalities and crashes, policing and emergency servicers that may be needed, the comparison of travel user costs between alternatives, and much more. If the demand forecast is inaccurate or based on flawed comparisons then many other parts of the SDEIS are wrong and the justification of the project has no merit. Travel Demand will also be brought up in various other sections of these comments.

RESPONSE: The travel demand model used for the Juneau Access Improvement Project is neither “inaccurate” nor based on “flawed comparisons.” The forecast numbers are not an “assumption” or “a huge uncertainty.” All traffic demand models attempt to predict future demand based on assumptions and data available in the present.

The total demand model used for this project was developed based on empirical data derived from actual travel conditions observed in communities with geographic characteristics similar to Juneau located in Alaska and Western Canada. The model starts by defining a condition that the modelers called “unconstrained demand.” This level of demand predicts how many people would want to travel between Juneau and Haines/Skagway if there were a road the entire distance. This predictive condition was based on the assumption that people in Juneau, Haines, and Skagway would exhibit similar travel patterns given the opportunity to travel by road like other similarly situated communities. Based on the project team’s research, there are no indicators that travel behavior in Juneau, Skagway, and Haines would differ substantially from that of other Alaskan and Canadian communities if full highway access were available. Based on the data collected, the project team is confident that Juneau residents would travel in a similar

manner to other Alaskan residents.

The forecast only used the unconstrained demand as an upper bound to bracket the overall demand in the corridor. Each forecast, for each of the alternatives, scales down from the unconstrained demand based on factors of cost, travel time, schedule convenience, etc. Using such factors to predict traveler's choices and behavior amongst competing alternatives is a common modeling practice and is used in nearly every traffic model. By factoring the demand down from the unconstrained demand based on costs, travel time, and convenience, the model predicts reasonable estimates of travel behavior based on the relative merits of the alternatives.

Contrary to the commenter's assertion, the modelers used quantitative methods to validate the model and estimated demand using more than one methodology to provide greater certainty that the forecast was grounded in real data and based on repeatable, valid methodologies/approaches. These approaches were developed by travel modelers at Fehr & Peers. This firm was specifically identified and hired for its expertise in the travel modeling field, and the approach and results were peer reviewed by an independent university professor with expertise in travel modeling and travel behavior prior to the results being accepted for use in the Draft SEIS. Two methods/models were selected as being most representative of likely conditions along Lynn Canal. Each of these models was developed independently and resulted in similar estimates of travel volume along Lynn Canal. The methodology and results of both approaches are fully disclosed in Appendix AA, *Traffic Forecast Report*, and summarized in the Draft SEIS. The traffic forecast was updated for the Final SEIS, taking into consideration input received on the Draft SEIS and updated base year information.

DOT&PF's assumption is that there is a large unmet travel demand in the Lynn Canal corridor, and that "low" Lynn Canal Ferry use (Average Annual Daily Traffic (AADT)) is an indication that the "AMHS is not meeting the travel demand in the Lynn Canal. This is a very strange assumption and defies logical thinking. DOT&PF says that by increasing the opportunity to travel and decreasing travel times and user costs in Alternative 2b, travel will increase by as much as 500% over 35 years. There is no data to support this huge increase in travel or the assumption that low ferry ridership means unmet demand. The logic behind this is irrational, and historically it is disputed using DOT&PF's Table 1-1 data which has the data of ferry sailings and ferry use year by year. Example, the numbers from year 2007 had a decrease of travel when more opportunities for travel increased. This is only one example. The year with the most volume, 1991, had only 66% of the travel opportunity provided in 2007, yet had 24% more vehicle volume and 46% more passenger volume. Even the year with the least travel opportunity, 1989 with 240 round trips, had more passengers and vehicles than 2007. Similar correlations disputing DOT&PF's assumption occurred between 2011 and 2012. There are many variables that can contribute to the flux in user use compared to opportunity in the AMHS's Lynn Canal corridor, including economic down- turns and up-turns, more

people using private boats, and population changes among others. To the point, there is no rationale to support DOT&PF's assumption that there is an unmet demand for travel and that the AMHS can't meet it. The reality is that the AMHS' ferries do and can meet Lynn Canal travel demand. Alaska Class Ferries (ACF) meets the current Lynn Canal travel demand and can do more: (McDowell Group North Lynn Canal Ferry Service Analysis 2014 PDF). Based on no assumptions a currently commissioned ferry use study has come to the conclusion that two ACF's doing the Juneau/Haines/Juneau route can meet the peak summer demand and more for Lynn Canal ferry travel, freeing up the M/V Malaspina for other routes, with a deduction of costs. No new ferry terminals will be needed.

RESPONSE: The commenter has not documented any “irrational” or “strange” assumptions. The commenter has selected a data set that is too small to make statistically valid correlations and presents it as a suggestion that the traffic forecast in Lynn Canal is faulty. It is not within accepted modeling practice or statistical analysis to rely on one or two years of data to surmise a statistically valid correlation (or the lack of one). It is just as invalid to pick individual years to demonstrate a positive correlation in the data. For example, between 1989 and 1991 round trips increased from 240 to 290 and passenger demand increased from 115,742 to 131,865; numerous other hand-picked years could be identified to suggest a different correlation. The reason this approach is invalid is that frequency of service is not the only factor in people’s decision to travel. Other factors include costs, schedule, or economic conditions in the given year cited. Each of these factors would need to be known to make an accurate assessment. Moreover, the supply in capacity varies from year to year. Because capacity is not consistent, trip planning can be difficult for the traveling public. Conclusions drawn from data over short periods using a variable that is not consistent long enough to see a correlation in the response are suspect.

As the commenter points out, there are many factors that can contribute to anomalies in 1 or 2 years of data that can be explained by factors such as the economy. The Purpose and Need chapter (Chapter 1) of the Draft and Final SEIS presents the data described by the commenter and also discusses the up-turns and down-turns. None of the past changes in frequency, cost, or travel time that were implemented by AMHS were done in a coordinated fashion or implemented for a long enough time to test their effectiveness. Nor were the changes of the magnitude proposed by Alternatives 2B and 3.

DOT&PF and FHWA did not rely on “faulty assumptions,” and they did present strong and convincing data of the overall demand in the Lynn Canal corridor in the SEIS. The total demand model used for this project was developed based on empirical data derived from actual travel conditions observed in communities with similar geographic characteristics as Juneau in Alaska and Western Canada. The commenter only reports a portion of the data collected. The model input analysis also included Anchorage, Fairbanks, and Whitehorse (as regional centers like Juneau) as well as similar coastal communities, including Prince Rupert and Port Hardy, British Columbia and Seward, Homer, Valdez, Haines, and Skagway, Alaska (see *Appendix AA, Traffic Forecast Report*).

The model used data from these communities to generate a trip dissipation model. Based on the results

from the communities listed above, a very strong correlation was found between the distance traveled from the edge of the community and the traffic volumes. This predictive model was used, among other sources, to develop an unconstrained demand model for Lynn Canal. It is based on the assumption that people in Juneau, Haines, and Skagway would exhibit similar travel patterns given the opportunity to travel by road as other similarly situated communities. Based on the project team's research, there are no indicators that travel behavior in Juneau, Skagway, and Haines would differ substantially from that of other Alaskan and Canadian communities if full highway access were available. Based on the data collected, the project team is confident that Juneau residents would travel in a similar manner to other Alaskan residents.

The forecast only used the unconstrained demand as an upper bound to bracket the overall demand in the corridor. Each forecast, for each alternative, scales down from the unconstrained demand based on factors of cost, travel time, schedule convenience, etc. Using such factors to predict traveler's choices and behavior amongst competing alternatives is a common modeling practice and is used in nearly every traffic model. By factoring the demand down from the unconstrained demand based on costs, travel time, and convenience, the model predicts reasonable estimates of travel behavior based on the relative merits of the alternatives.

Moreover, more than one approach to predicting future travel behavior was used by the project team. These approaches were developed by travel modelers at Fehr & Peers. This firm was specifically identified and hired for its expertise in the travel modeling field, and its approach and results were peer reviewed by an independent university professor with expertise in travel modeling and travel behavior prior to the results being accepted for use in the Draft SEIS. Two models/approaches were selected as being most representative of likely conditions along Lynn Canal. Each of these two models was developed independently and resulted in similar estimates of travel volume along Lynn Canal. The methodology and results of both approaches are fully disclosed in *Appendix AA, Traffic Forecast Report* and summarized in the Draft and Final SEIS.

#### **Other Problems in DOT & PF's Demand Forecast:**

Most of Skagway is within a mile of the ferry terminal and the DSEIS presents data that 700,000 - 800,000 per year visitors access Skagway by just a boat, about 100% more than by auto. There is virtually no need for people traveling from Juneau or Haines to Skagway to take a car with them. It makes no sense to take a car when you can access the city by a 5 minute slow walk from the AMHS ferry dock. The DSEIS is estimating an unconstrained demand of 275 vehicle roundtrips per day from Juneau residents to Skagway and a summer demand of an even higher 615 round trips per day. Why would they do this? Even if they wanted to visit Skagway as thousands do each summer, why would they take their vehicles?

**RESPONSE:** The numbers cited for unconstrained demand referenced by the commenter are incorrect. The correct numbers can be found in Table 7 of Appendix D of the *Traffic Forecast Report* (Appendix AA of the Draft SEIS). The commenter confuses unconstrained demand with the demand that is presented in the Draft SEIS for the reasonable alternatives. The unconstrained demand is not the demand predicted for any

of the proposed reasonable alternatives. The forecast only used the unconstrained demand as an upper bound to bracket the overall demand in the corridor. Each forecast, for each of the alternatives, scales down from the unconstrained demand based on factors of cost, travel time, schedule convenience, etc.

As to why the travelers would want to take their vehicles to Haines, Skagway, or Juneau through Lynn Canal, the Purpose and Need chapter (Chapter 1 of the Draft SEIS) documented the problems with the current service. It is time consuming, inconvenient, and expensive. By providing greater flexibility for when people can travel, reducing how long it would take to make the trip, and also reducing the cost of the trip, it is predicted that many people would choose to drive. Moreover, the trips forecasted to use the project alternatives are not just those “visiting Skagway.” The travel demand considered trips in both directions and included Skagway and Juneau residents, visitors, freight haulers, etc. who would use the alternatives, as well as other users just passing through (e.g., people traveling from Whitehorse or Anchorage to and from Juneau, or from even beyond these points).

Citing the 700,000 to 800,000 cruise ship passengers that visit Skagway by boat (and not needing a car) and comparing them to the demand for those wanting or needing to bring a car is misleading. First, the Draft SEIS did not include the over 800,000 cruise ship visitors as part of the demand for the proposed alternatives. Those visitors would continue to arrive in Skagway by boat (on the cruise ships), and the Draft SEIS did not predict that they would need a car when they get to Skagway. Second, it is not disputed that the AMHS ferry dock is within walking distance to downtown Skagway. However, Skagway is the only port of the three that is within walking distance to town. However, as noted above, not all travelers using the Skagway Ferry Terminal have an origin/destination within walking distance. For example, the highway through Skagway connects into Canada and provides an important overland route into and out of the region. In addition, Juneau and Haines require vehicle travel to reach those ferry terminals. The road alternatives (2B and 3) represent a shift in the way transportation would be provided in the corridor—away from a primarily public transportation mode that operates more like a public transit service, to a highway system where private vehicles provide most of the transportation (publicly-owned shuttle ferries would provide shorter links connecting the roadways).

There is a large discrepancy for the Skagway Route. Appendix FF takes the daily numbers in Appendix AA and turns them into annual numbers. For Skagway, the transportation model estimate for existing users is 9,954 vehicles per year. The average of the volumes for the past five years is 6,412 vehicles. Therefore, the model over predicts the existing usage by 55%. The model also over predicts the Haines route but by a lesser amount, 14%. Even if there were no other problems with the models such as those mentioned above, these discrepancies would suggest that future demand is overestimated.

**RESPONSE:** The commenter has used incorrect AMHS numbers in generating their calculation. The error is related to the two types of data reported by AMHS: (1) link volume data for city pairs, and (2) on-off data for each port of call, also known as “port-to-port volume data.” The link volume data includes all ‘local’ persons and vehicles beginning and ending in Juneau, Haines, or Skagway plus all passengers who passed through Juneau, Haines, or Skagway northbound or southbound on their way to destinations

outside Lynn Canal. In contrast, on-off data only includes trips that embarked or disembarked within Lynn Canal (i.e., no through travel).

The data reported in Appendices AA (*Traffic Forecast Report*) and FF (*User Benefit, Life-Cycle Cost, and Total Project Cost Analyses*) represent link volume data. These data are summarized as average daily traffic in Table 3-1 of Appendix AA (and are adjusted to annual traffic in Tables A-6 and A-10 of Appendix FF). Table A-10 shows the 9,954 total annual link volumes for Juneau-Skagway reported by the commenter (adding summer vehicle count of 6,732 to winter vehicle count of 3,222). The link volume number is the correct number for calculating the total travel between Juneau and Skagway, in that it includes the through-traffic.

It appears that the commenter used an average of 5 years of port-to-port volume data. Looking at on/off data only, Fehr & Peers examined the AMHS on/off data for Juneau-Skagway for 3 years: 2011, 5,825 vehicles; 2012, 6,586 vehicles; and 2013, 6,558 vehicles. This produces a 3 year average of 6,323 vehicles, which is close to the commenter's value of 6,412 vehicles. Therefore, we believe that the commenter used on/off data in the calculation. These port-to-port volume data do not account for the through-trips on the ferry within Lynn Canal. Similar comparisons account for the differences in the Juneau-Haines data.

The source of the daily link volume data was the AMHS 2011 *Annual Traffic Volume Report*. Fehr & Peers reviewed comparable data from the 2010 through 2014 traffic reports. The passenger and vehicle counts are virtually unchanged on an annual basis over the last 5 years for which data is available. DOT&PF and FHWA are confident that the link volume data used in the analysis accurately reflects ferry usage within Lynn Canal. By relying on the port-to-port data, the commenter is incorrectly under representing the actual travel because the through-traffic is not included.

### **The Hypothetical "unconstrained demand" Model:**

As noted above the farther an estimate is projected through time the more it becomes unreliable, and DOT&PF's estimated demands are missing quantified measures of their uncertainty.

DOT&PF uses other roads to validate the unconstrained model though there is no possibility of having an accurate comparison. An example of uncertainty is the cultural correction for the Whitehorse to Skagway road. A city edge trip rates per population number (Appendix AA, Fig 2,)

A second indicator is the comparison of the traffic growth within transportation corridors adjacent to Lynn Canal to traffic growth in Lynn Canal. (Pg 1-13) Table 1-3 shows that the lightly traveled Dyea Road to Skagway has traffic volumes almost double the traffic transported by AMHS. To say Dyea road and AMHS are comparable is not remotely true. Many shore side cruise tours travel Dyea road - a 4-ship day, which is common, can bring 10,000 tourists to Skagway. Also, Skagway summer hires take advantage of the closeness of Dyea for breaks from the grind of serving all those

cruise passengers. All of which doesn't begin to correlate with AMHS Lynn Canal travel.

The single validation done for a city pair is for the interchange between Anchorage and Fairbanks.

The model estimates about 3,000 trips per day between these cities and also found about 3,000 vehicles on the road. This ignores the large destination between these cities, Denali National Park! A large proportion of the traffic observed at the traffic count locations is related to the park and to people living between the two major cities, rather than all being accounted for by intercity travel.

The high rate of 4,682 selected on the basis of Fairbanks and Anchorage is iffy also (Pg 1-11).

RESPONSE: Fehr & Peers did not use other roads to “validate” the model. Fehr & Peers used other similarly situated communities in Alaska (both regional center communities like Juneau and other, more isolated coastal communities like Haines and Skagway) and Western Canada with similar geographic characteristics as Juneau, and examined their trip-making patterns on the highways leaving those communities. The analysis found a strong correlation between the distance traveled from the edge of the community and the traffic volumes. This predictive model was used, among other sources, to develop the total (unconstrained) demand model for Lynn Canal. That model was used to bracket an upper end (or total demand) for travel in Lynn Canal. Demand was then scaled down from the total demand based on constraints like cost, travel time, schedule convenience, etc. Using such factors to predict traveler’s choices and behavior amongst competing alternatives is a common modeling practice and is used in nearly every traffic model. By factoring the demand down from the unconstrained demand, the model predicts reasonable estimates of travel behavior based on the relative merits of the alternatives. The model was able to reasonably predict Lynn Canal travel with constraints applied, and was “validated” against a known existing data point in time for the existing ferry system in Lynn Canal (i.e., travel time, cost, convenience, etc. were applied to the model, and it was calibrated to be able to predict demand for an existing known data point). Such procedures are a standard step in every valid modeling process.

Regarding the commenter’s other critiques of the modeling:

- Contrary to the commenter’s assertion that the “estimated demands are missing quantified measures of their uncertainty,” the traffic model report does present such measures. See Table 4-6 in Appendix AA, *Traffic Forecast Report*, which quantitatively presents high and low total demand predictions. The traffic forecasts used a conservatively low range of ‘edge’ traffic rates (see Table 4-5 and Figure 4-1 of Appendix AA) for the Juneau traffic estimates. While the population of Juneau more closely matches some of the smaller communities shown in Table 4-5 (each of which have much higher edge traffic rates), the range of rates used in the forecasts were balanced between those of Whitehorse and Anchorage/Fairbanks. The forecasted rates for Skagway and Haines were based on their existing observed rates.
- The example cited as an “uncertainty” and described by the commenter as a “cultural correction for the Whitehorse to Skagway road” is actually the opposite. Rather than an uncertainty, the citation reflects a refinement to the model assumptions, to better reflect reality. As documented in Appendix C of the

Appendix AA, *Traffic Forecast Report*, Americans travel approximately 50% more than Canadians, which is why Whitehorse has a lower trip rate per population than American cities with similar characteristics. Whitehorse trip generation information was studied as part of the model development and validation process.

- The travel demand forecasts presented in Appendix AA are not based on the road to Dyea. The edge and dissipation modeling presented in Appendix AA is based on the Klondike Highway, The table cited from Chapter 1 of the Draft SEIS, is making the point that even rural roads that are not a part of the National Highway System see traffic volumes much greater than that experienced on the AMHS. The table from Chapter 1 is not a result of, nor the basis for, the traffic forecasts. To try to indicate that one is the result or basis for the other is inaccurate.
- It is inaccurate to infer that there was a “single validation” done for a “city pair between Anchorage and Fairbanks.” First, as was previously discussed, the information described by the commenter was not part of the “validation” of the traffic demand for the project alternatives forecasts. Validation has a very specific meaning within traffic forecasting different from that used by the commenter. Second, the model does not estimate or rely on trips interchanging “between” Anchorage and Fairbanks. As is explained in Appendix AA, three regional cities were used as example “regional centers” to gauge the edge effect of travel from these centers. Appendix AA describes this edge effect as “the point traffic volumes decrease exponentially until leveling off at a particular volume.” It is not, as the commenter suggests, about the interchange of traffic. As can be seen in Figure 4-3 of Appendix AA, the edge effect on the Parks Highway (from either Fairbanks or Anchorage) occurs at a much shorter distance than Denali National Park. Moreover, the commenter’s logic for ruling out these cities because they have a National Park some distance outside them is illogical, given that the commenter mentions the draw of the Klondike Gold Rush Historic National Park and Dyea located in Skagway. Such a draw could be considered analogous for the regional center of Juneau to the draw of Denali National Park to Anchorage and Fairbanks.
- The suggestion that only one community (or as the commenter erroneously suggests, a “single city pair”) is used for validation is incorrect. The analysis in Appendix AA clearly identified three regional hubs and seven coastal communities in Alaska and British Columbia, with similar highway-ferry connections terminating at these communities.

### **Alternatives**

Alternative 1b: Alternative 1B has been designed with less capacity and higher costs than it could have been and therefore violates the court mandate to "rigorously explore an alternative aimed at providing improved and more efficient ferry service". The proof of this is in Alternative 1b Optimized and Alternative 5 detailed below.

RESPONSE: Alternative 1B did not violate the Court mandate and DOT&PF and FHWA rigorously explored an alternative aimed at providing improved and more efficient service. In response to the 2009 U.S. District Court ruling, DOT&PF and FHWA developed a new alternative, shared a draft of that alternative with the public during a new scoping effort, took input on the new alternative, and revised that alternative based on the scoping comments received. The new alternative took into account changes that

had occurred to “existing assets” in the AMHS fleet since the 2006 ROD, the capabilities of the vessels in the fleet, and the needs and mission of the fleet to the numerous communities served by AMHS. DOT&PF and FHWA fully disclosed the development and evaluation process in the Draft SEIS. Appendix CC of the Draft SEIS describes the efforts undertaken to develop Alternative 1B and documents the data and analysis relied on to create as reasonable an alternative as possible for solving the transportation problems in the corridor using only existing assets.

Alternative 1B incorporated the following considerations:

- Relied on existing ferry assets and terminals, without new construction
- Considered reassigning mainline vessels
- Provided additional capacity as compared to Alternative 1 – No Action
- Adjusted schedules and increased frequency as compared to Alternative 1 – No Action
- Reduced travel times as compared to Alternative 1 – No Action
- Considered system enhancements such as increasing the staff at the ferry terminals, increasing the reservation staff, upgrading the reservation website, producing and maintaining a reliable schedule 2 years in advance, increasing marketing, reducing fares, and improving the management structure.

The suggestion that Alternative 1B has been designed with less capacity than it could have been is misleading. Alternative 1B was developed to provide sufficient capacity to match the demand. Moreover, it did make an improvement in capacity as compared to Alternative 1 – No Action. As shown in Chapter 2 (Table 2-5 of the Draft SEIS), Alternative 1B evaluated in the Draft SEIS would have a summer capacity of 129 vehicles per day to Haines and a summer capacity of 201 vehicles per day to Skagway, compared to the summer capacities of 93 and 61 vehicles to Haines and Skagway, respectively, for the Alternative 1 – No Action (see Table 2-2 of the Draft SEIS). The Final SEIS, similarly, shows higher capacities for Alternative 1B as compared to Alternative 1. Regarding higher costs, Alternative 1B did not add any additional capital costs. Increasing service levels in Lynn Canal, however, cannot be accomplished using existing assets without increasing the cost of operations and maintenance.

The suggestion that Alternative 1B Optimized and 5 offer “proof” of a failure to satisfy the Court mandate is similarly incorrect. First, Alternative 1B Optimized is not a reasonable alternative because the Day Boat Alaska Class Ferries (ACFs) cannot make a daily Auke Bay-Skagway round trip and comply with U.S. Coast Guard (USCG) work/rest requirements. Second, Alternative 5 does not comply with the Court mandate because it requires a large up front capital investment. It was, however, rigorously explored and concluded that this alternative is a variation of existing alternatives and therefore would be an unnecessary addition to the range of reasonable alternatives..

DOT&PF has analyzed Alternative 1B Optimized and Alternative 5 proposed by the Skagway Marine Access Commission (SMAC) and have included the updated analysis and information in Appendix II, *Alternative 1B Optimized and Alternative 5 Evaluation*, of the Final SEIS. The two new alternatives were labeled by SMAC as “Alternative 1B Optimized” and “Alternative 5.” DOT&PF has retained this labeling for convenience, but use of these labels should not be interpreted as conferring stature or reasonableness.

**Alternative 1b Optimized: Prepared by the Skagway Marine Access Committee (SMAC).  
Summarized by TGSC**

Alternative 1B/Optimized assumes the same vessel and terminal improvements as are proposed for Alternative 1B and requires no new construction of ships or berths

The optimization of 1B involves two major components:

- Reconfiguration of route segments and home porting the Malaspina in Haines
- Elimination of all "through" mainline service north of Juneau

Home porting the MV Malaspina in Haines would allow that vessel to be deployed on alternative routing of Haines/Skagway/Haines/ Auke Bay/Haines which would accomplish the following:

- Utilizes the large vehicle capacity of the Malaspina on the route segment with the most demand.
- Takes maximum advantage of the Malaspina's ability to run longer than 12 hours a day.
- Allows the Malaspina to assume the role of shuttling traffic between the two communities of Haines and Skagway freeing up an ACF day boat to run between Haines and Auke Bay.
- Matches the capacity of the smaller ACF vessel to the demand of the less frequently traveled route between Skagway and Auke Bay.
- Eliminates the need for the "through" mainliners and frees up a mainliner to be retired or deployed to other parts of the region such as Sitka.
- Saves the AMHS more than one million dollars in annual ferry operating costs.

**Route Configuration**

- The MV Malaspina would Homeport in Haines and run the HNS-SGY-HNS route once a day and the HNS-ABY-HNS route once a day, seven days a week
- ACF 1 would homeport in Skagway and run SGY-ABY-SGY route once a day, seven days a week
- ACF 2 would homeport in Auke Bay and run the ABY-HNS-ABY route once a day seven days a week

**Nominal Summer Schedule**

Malaspina: Home ported in Haines and sails HNS-SGY-HNS-ABY-HNS seven days a week. ACF1: home ported in Skagway and sails SGY-ABY-SGY seven days a week.

ACF2: home ported in Auke Bay and sails ABY-HNS-ABY seven days a week.

All departures are in the morning with the Skagway ACF departing early enough to free up the Skagway Terminal for the arrival of the Malaspina.

This provides improved capacity for the demand models. It increases number of sailings per week and provides an increased variety of departure times. The Malaspina homeports in Haines and each morning sails roundtrip to Skagway accomplishing the role of shuttling traffic between the two communities. The use of the Malaspina in this fashion allows for the user alternative routing between Auke Bay and Skagway if necessary or desired.

Mainliners terminate their northbound sailing in Auke Bay and can be utilized on alternative routes such as Sitka.

### **Nominal Winter Schedule**

ACF1: Home ported in ABY and sails 5 days a week ABY-HNS-ABY ACF2: home ported in HNS and sails 5 days a week HNS-SGY-HNS

This provides slightly more capacity and more frequency of sailings per week. The ACF in Auke Bay would be available to provide additional sailing in Lynn Canal or surrounding communities such as Hoonah, Gustavus, Angoon, etc.

Mainliners terminate their northbound sailing in Auke Bay and can be utilized on alternative routes such as Sitka.

### **Advantages of Alternative 1B Optimized compared to Alternative 1B**

The cost analysis for Alternative 1B Optimized is contained in Appendix A. Our preliminary work indicates that this proposal could save the state more than \$1million\* in annual operating costs while increasing capacity and travel options. We believe it could be significantly more than this (see footnote on preceding page.) Eliminating "through" mainliners from Lynn Canal allows the AMHS to redeploy those ships and/or retire an aging vessel. This has the potential to increase service to other communities in Northern Panhandle.

Unlike Alternative 1B, under our proposal capacity is scaled to proven demand with room for growth. The capacity on the popular Auke Bay/Haines route is increased while capacity the Auke Bay/Skagway and the Skagway/Haines routes is more closely matched to demand. Other benefits

include:

- Multiple deployment options, especially in the winter.
- More flexibility and travel options to passengers.
- Utilizes the MV Malaspina in her traditional role of day boat in Lynn Canal. While this adds some slight fuel costs (owing to a longer route than the Malaspina route proposed under 1B) there are no additional crew costs because the Malaspina's crew is paid 24/7 whether it is tied up at the dock or sailing on a route.
- Gives Skagway residents and visitors direct access to Juneau seven days a week in the summer.

RESPONSE: DOT&PF and FHWA have analyzed the proposed changes to Alternative 1B and included the updated analysis and information in Appendix II of the Final SEIS.

DOT&PF and FHWA have examined this alternative and have determined that it is not a reasonable alternative for the following reasons:

- First, the Day Boat ACF cannot make a daily Auke Bay-Skagway run and meet USCG work/rest requirements. Without modification of the vessel or the loading and unloading facility at the Skagway Ferry Terminal to decrease the Day Boat ACF operating day, it would not be compliant with the USCG requirements.
- Second, discontinuing mainline ferry service within Lynn Canal creates peak-day capacity problems at Auke Bay. During the summer, on the 2 days per week that the mainliner sails, the amount of transferring traffic plus local traffic demand to/from Skagway would typically be greater than the capacity of the Auke Bay-Skagway Day Boat ACF proposed in Alternative 1B Optimized.
- Third, there is insufficient berth space and vehicle staging areas in Auke Bay to have the mainline vessel in port while accommodating all the transferring vehicles without vessel and vehicle congestion and delays. To fully clear northbound and southbound connecting travelers onto the mainline vessel, the mainliner needs to remain docked in Auke Bay long enough for the two Day Boat ACFs and the M/V Malaspina to come and go. Moreover, the staging area at Auke Bay is insufficient to accommodate all the disembarking and embarking vehicles. The space is limited and was not designed or sized to handle the transfers of the volumes expected.

It is our position that these factors should have been considered in any analysis of an enhanced marine alternative. The fact that they are missing from Alternative 1B would indicate that the Department did not do "due diligence" in seeking ways to reduce costs while improving service with existing assets. To quote Judge Sedwick we "cannot conclude that an alternative aimed at providing improved and more efficient ferry service was "rigorously explored" by the agencies."

RESPONSE: DOT&PF and FHWA dispute the assertion that they did not do "due diligence" in developing Alternative 1B. DOT&PF and AMHS staff developed a new alternative based on direction from the Court, shared a draft of that alternative with the public during a new scoping effort, took input on

the new alternative, and revised that alternative based on the scoping comments received. The new alternative took into account changes that had occurred to the “existing assets” in the AMHS fleet since the 2006 ROD, the capabilities of the vessels in the fleet, and the needs and mission of the fleet to the numerous communities served by AMHS. DOT&PF and FHWA fully disclosed the development and evaluation process in the Draft SEIS. Appendix CC of the Draft SEIS described the efforts undertaken to develop Alternative 1B and documented the data and analysis relied on to create as reasonable an alternative as possible for solving the transportation problems in the corridor using only existing assets. DOT&PF and FHWA took comments on Alternative 1B during development of the Draft SEIS and the public review period, and have addressed those comments in the Final SEIS, including updating and refining it for current data.

**Alternative 3:** The West Lynn Canal route has not been analyzed sufficiently for alternative comparisons. Notably the safety issues being brought up in these comments and the geo hazards. See our sections on: **Safety and Fatalities:**

Because of the terrain, not as steep and less blasting, and less avalanches to mitigate for, TGSC believes it is a less costly road to build than the alternative 2b road if the construction work is home based out of Haines rather than Juneau.

**RESPONSE:** The cost of construction and avalanche mitigation (Capital and Maintenance) is presented in the Final SEIS. Refer to Attachment E of the *2017 Update to Appendix D - Technical Alignment Report* in Appendix Z of the Final SEIS for detailed construction cost estimates and Attachment C for detailed annual maintenance costs for Alternatives 2B and 3. The cost estimates for Alternatives 2B and 3 include the cost of remote camp(s).

Other costs and meeting the flawed P&N's of JAI can be optimized by using the two AFC's home based in Auke Bay instead of Sawmill Cove which eliminates the need for a new terminal at Sawmill Cove and reduces the travel time to get there. A third AFC would provide service between Haines and Skagway and will free up the Malaspina for other uses.

**RESPONSE:** The comment essentially describes Alternative 4C, which was developed and analyzed in the Draft and Final SEIS. Using Auke Bay instead of Sawmill Cove would reduce capacity, increase travel time, and increase cost to the user. In combination, this would result in a reduction of traffic generated. Weekly summer round trips would be reduced from 32 (Sawmill Cove) to 18 (Auke Bay).

**Alt 5: Alaska Class Alternative (ACA): Prepared by the Skagway Marine Access Committee.**

#### **Summarized by TGSC**

Alternative 5 calls for construction of a third ACF and the retirement of one aging mainliner. Our analysis shows that the traffic demand in Lynn Canal can be satisfied at a much lower operation

cost per mile through the addition of a third ACF. The following are the key components of the All Alaska Class Alternative:

- Acquiring a third ACF
- Removing mainliner service north of Auke Bay
- Implementing all capital improvements as outlined under Marine Alternative 4C:
  - o Auke Bay expanded to include new double stem berth
  - o Skagway expanded to include a new end berth
  - o New conventional monohull shuttle ferry constructed to operate between Haines and Skagway.

Deployment of three AMHS day boats/ACF and the removal of mainline service will result in an overall reduction in the cost of providing ferry service in Lynn Canal. Even with the capital costs associated with it.

#### **Proposed Summer Schedule and Routes:**

ACF One home ported in Haines and sails roundtrip from Haines to Auke Bay once a day seven days per week

ACF Two home ported in Skagway and sails roundtrip from Skagway to Auke Bay once a day seven days per week

ACF Three home ported in Auke Bay and sails roundtrip to Haines four days per week and Skagway three days per week.

This will result in 11 roundtrips between Auke Bay and Haines each week and ten sailings between Auke Bay and Skagway each week, providing more opportunities to travel than the current system provides. This meets the P&N of the project.

#### **Proposed Winter Schedule and Routes:**

ACF One is home ported in Auke Bay and sails roundtrip to Haines five days a week. ACF Two is home ported in Haines and sails to Skagway twice a day 5 days a week

**Capacity:**

The addition of a third ACF as outlined in Alternative 5 would produce an overall increase in summer and winter capacity between Auke Bay, Haines and Skagway compared to 4C.

Alternative 5 would significantly increase the frequency of sailings between Auke Bay, Haines and Skagway.

Costs: An annual savings of more than 1 million a year than alt 4c

ALTERNATIVE 5 ANNUAL CREW AND FUEL COST See Exhibit A for Fuel and Crew Cost Breakdowns	\$8,179,847	\$6,618,992
--	-------------	-------------

**ALTERNATIVE 4C FUEL AND CREW COSTS**

Route /Vessel	Crew	Fuel
HNS-SGY-HNS SHUTTLE	\$1,160,654	\$2 12,276
ABY-HNS-ABY ACF	\$2,658,2 19	\$2,4 15,915
ABY-SGY-ABY ACF	\$2,658,2 19	\$2.686,227
ABY-HNS-SGY -HNS-ABY MAINLINERS	\$3,647,773	\$470,078
ALTERNATIVE 4C ANNUAL CREW AND FUEL COST	\$10,124,865	\$5,784,496
<b>ALTERNATIVE 4C TOTAL</b>		<b>\$15,909,361</b>
<b>ALTERNATIVE 5 TOTAL</b>		<b>\$14,798,839</b>
<b>ANNUAL SAVINGS</b>		<b>\$1,110,522</b>

A more specific break down on costs, capacity, number of sailings, is in attachment #

RESPONSE: DOT&PF and FHWA have analyzed the proposed alternative and included the updated analysis and information in the Final SEIS in Appendix II.

Alternative 5 is a ferry alternative that builds upon Alternative 4C from the 2014 Draft SEIS. It relies on using three Day Boat ACF vessels in Lynn Canal (the two programmed vessels and a new vessel that would be built for this alternative), plus the terminal improvements identified in Alternative 4C. Alternative 5 would eliminate mainline ferry service in Lynn Canal.

DOT&PF and FHWA have examined this alternative and have determined that it is a variation of existing alternatives and therefore would be an unnecessary addition to the range of reasonable alternatives. It would attract fewer trips than Alternative 1B, provide similar capacity to Haines (and less to Skagway), and have similar travel time as other alternatives studied (Alternatives 1 – No Action, 1B, and 4C). It fits within the range of capital and operational costs (not the cheapest and not the most expensive of the ferry

options). In short, it is not unique enough to constitute something outside the range of alternatives already studied. Further, sufficient information has been generated to confirm it is inferior to other alternatives already in the SEIS.

Additionally, during summer, discontinuing mainline ferry service within Lynn Canal could create capacity issues that may prevent some travelers from reaching their final destination via a direct ferry connection. Vehicles traveling through Juneau in either direction on mainline vessels would be required to transfer from the Lynn Canal vessels to the mainline vessel at Auke Bay. Mainline vessels hold between 88 and 134 vehicles. Depending on how many vehicles were passing through Juneau, there could be insufficient capacity on the days the mainliner arrives when local traffic would be added to the demand generated by these mainline vessels. Some Lynn Canal travelers would likely have to use the Haines/Skagway shuttle and travel via Haines or Skagway to reach their final destination, which increases their travel time and potentially their costs (if they need to stay overnight).

DOT&PF and FHWA have concluded this alternative is a variation of existing alternatives and therefore would be an unnecessary addition to the range of reasonable alternatives. A detailed analysis of Alternative 1B Optimized is found in Appendix II.

**Wait Time:** The DSEIS stresses the long waits that those with vehicles must wait today and would persist under the No Action and 1B alternatives:

- Travelers must make reservations for vehicles in advance; travel during peak summer season periods can require making reservations within days of the summer ferry schedule release in the preceding December.
- Changing reservations can be problematic and can include cancellation charges if made within 14 days of a reservation ...
- A 1- to 2-hour check-in time is required
- Reservation changes are limited to regular business hours.
- When ferries do not have vehicle space available, travelers may register at the ticket counter 2 hours before sailing for standby vehicle space; however, there is no guarantee of boarding. (DSEIS, p. 1-15)

The DSEIS assumes that all of these problems would disappear under Alternative 2B, stating:

The travel times for the ferries to and from Katzehin and between Haines and Skagway do not include check-in time because reservations would not be taken. Vehicles would be accommodated on a first-come, first-serve basis. An average waiting time is included in the travel time to account for a portion of drivers assumed to arrive well ahead of the loading schedule. (DSEIS, p. 2-15)

While Alternative 2B would offer more departures than the No Action and 1B alternatives, the

need for reservations is not because of the ferry frequency but because of the high level of demand relative to the available space. The DSEIS demand and capacity numbers show that the ferries would be just as crowded in the summer in Alternative 2B as for the No Action alternative and considerably more crowded than in Alternative 1B as shown in Figure 5.

RESPONSE: The ferries associated with the roadway alternatives (2B and 3) would operate differently from the rest of the AMHS and would be more like the shuttle ferry to the Ketchikan airport. People would drive a longer road with a relatively short transit on the ferry (about 27 minutes for the Katzehin-Haines shuttle under Alternative 2B). While it is possible that a traveler could arrive at the terminal only to find the ferry had just departed or to find the ferry full and unable to take another vehicle, such scenarios are anticipated to be rare and would involve a wait time of two to three hours for the next ferry. Once a pattern is established, it is likely that travelers would self-select to days or times anticipated to be less busy. Most of the time, space would be available. For business travelers with tight timelines and little flexibility, private air carriers are available. Even if such travelers missed their desired ferry, they would likely be able to catch the next one a short time later. Under such a scenario, the travel time would still be much less than the current system.

The first-come/first-served operations model would not provide schedule certainty in the same way a reserved ticket for a specific departure time would. However, the certainty would be similar to driving virtually anywhere that traffic or an accident could slow progress. The ferry capacities and number of sailings were calculated to provide for the projected summer average daily traffic on the road. It is anticipated that patterns would develop, and regular travelers would learn to avoid heavy traffic times/days. Enough people would avoid those times and those that do not would be delayed. Removing the need for a reservation system speeds up the overall travel time by removing the associated check-in process. The shuttle ferries would run frequently, reducing the inconvenience.

With the exception of the last sailing of the day, if a sailing is missed due to lack of space, it is a two to three hour wait for the next sailing.

Much of this can be rectified in Alt 1b optimized and Alt 5 by increasing ferry travel thus decreasing waiting time, and the travelers not using cars won't have the added wait time they would have under the road alternatives (discussed in the walk on section). Passenger's luggage will have to be checked for security reasons at the Katzehin, Haines, and Skagway terminals under Alternative 2b. It is done on all AMHS ferries for Homeland Security. This is part of the P&N for providing decreased travel time but is left out of the wait time comparison. And where is the time for paying for the ferry service under 2b? It often takes 20 minutes at the Ketchikan terminal from my experience and that's only one terminal.

RESPONSE: By AMHS policy, walk-on passengers would have the same two hour check-in time as

vehicles in Juneau and one hour in Haines and Skagway. For Alternatives 2B and 3, the remote terminals at Katzehin, Sawmill Cove, and William Henry Bay would be unmanned. Luggage check-in would not be required because the vessels would not stop at multiple ports. Security for vessel operations is the responsibility of the shuttle crew. The security for unmanned terminals is covered by the individual vessel security plans that are approved by the USCG. These procedures are covered in the wait/travel times assumed for Alternatives 2B and 3. Details of fare collection would be determined during project design. However, it is possible that fares would be collected on board and possible fares would be collected only in one direction.

**Fares:** There are three significant problems with the fare inputs to the model that bias the results toward Alternative 2B. First, the DSEIS assumes that the "user" is a vehicle with 3.3 persons and this is over averaged. As discussed in **Wait Time** and **Walk-on Ferry Service** sections, many of the real AMHS customers are walk-ons with no vehicles, about 45%.

Those with vehicles predominantly have fewer than 3.3 persons. This causes the DSEIS to overstate "User Costs" throughout the document including Table ES-1, p. ES-16. The numbers shown there are higher than actual costs for all customers except vehicles with 4 or more persons.

**RESPONSE:** The Draft SEIS does not assume that the "User is a vehicle with 3.3 persons." The travel model starts with the total demand for travel in Lynn Canal. This value is measured in person trips and includes travel made by both automobile/ferry and air. The results from this forecast were converted from person trips to vehicle trips using average vehicle occupancies based on the predominant mode of each respective alternative. The rates were not overstated and, in fact, were adjusted to match existing data respective to each mode.

For Alternatives 2B and 3, a highway vehicle occupancy of 2.3 persons per vehicle was assumed, since these are predominantly roadway alternatives. This rate was calculated based on highway vehicle occupancies from National Household Travel Survey data for Alaska. For Alternatives 1, 1B, 4A, 4B, 4C, and 4D (predominantly ferry alternatives), a vehicle occupancy of 3.3 persons per vehicle (i.e., the ratio of passengers to vehicles in Lynn Canal) was used based on the average summer occupancy on the Juneau-Haines and Juneau-Skagway ferry links as shown in Table 3-1 of the *Traffic Forecast Report* (Appendix AA of the Draft SEIS). This average vehicle occupancy is higher, precisely because of the numbers of walk-on passengers associated with ferry travel in Lynn Canal. In this way, the alternative forecasts account for the higher number of walk-on passengers anticipated with the ferry alternatives and the lower numbers of walk-on passengers anticipated with Alternative 2B.

The road alternatives (2B and 3) represent a shift in the way transportation would be provided in the corridor—away from a primarily public transportation mode that would operate more like a public transit service, to a highway system where private vehicles would provide most of the transportation (publicly owned shuttle ferries would provide shorter links connecting the roadways). It is true that DOT&PF and FHWA do not anticipate that walk-on passengers would continue to find it convenient to have someone

drive them to the ferry terminal at Katzehin like they do today at Auke Bay. It is for this reason that a vehicle occupancy of 2.3 was used, because it is anticipated that Alternatives 2B and 3 would have operating characteristics closer to other highways in Alaska. Rather than traveling as a walk-on passenger, it is anticipated that most people would drive under Alternatives 2B and 3. User costs reflect this change, and the differences among the modes are reflected in the associated vehicle occupancy assumptions.

The commenter’s suggestion that the user costs shown would be “higher than actual costs for all customers except vehicles with 4 or more persons” is inaccurate. The user benefits in Appendix FF of the Draft SEIS used the same conversion (i.e., 2.3 persons per vehicle for the highway alternatives and 3.3 persons per vehicle for the ferry alternatives). Moreover, the user costs referenced (including in Table ES-1) are not computed based on vehicle occupancies. Of note, user costs for a family of four in a 19-foot vehicle were used only as an example in the Draft SEIS to illustrate the relative out-of-pocket costs of the alternatives. It was not the basis of calculating user costs or for the impact analysis. To help clarify, additional information about the anticipated fares for the various other travel markets (walk-on passengers, single drivers with a vehicle, etc.) has been added to the Final SEIS.

The fares for Alternatives 2B and 3 are not tied to the existing AMHS ferry fare structure, but all of the ferry alternatives are assigned current AMHS fares, with the exception of Alternative 1B, which affords a twenty percent discount on existing fares. The shuttle fares for the road alternatives are far lower than the least expensive current ferry fares. Alternative 2B sets fares of \$15 for vehicles and \$4.50 for adults to Haines and \$24 and \$8, respectively, to Skagway. Alternative 3 shows fares of \$20 for vehicles and \$7 for transfer from Sawmill Cove and William Henry Bay, and \$22 and \$7.50, respectively, for the shuttle between Haines and Skagway. By comparison, the current fares between Haines and Skagway, which are among the least expensive in the ferry system, are \$49 for vehicles and \$31 for adults.

There is no analysis contained in the fare memo or the DSEIS to explain why the road alternatives' fares are dramatically cheaper than the others, and the effect of this discrepancy is to skew the analysis of user costs toward the road alternatives. Leaving the cost of ferry delay out of the equation, if the existing Haines/Skagway fares are used to calculate total user costs for fares and vehicle, the costs of the road alternatives skyrocket. The cost for a trip from Skagway to Haines under Alt 2b would be twice as much as the current system, and a trip to Skagway from Haines would be roughly one-and-a-half times the current system.

<b>Fares and costs as currently depicted in Table A-13 (AppendixFF):</b>						
Alternative	vehicle fare	person fare	persons/vehicle	ferry fare	vehicle cost	total
1- Haines	\$86.00	\$37.00	3.3	\$63.06	\$4.48	\$67.54
1-Skagway	\$111.00	\$50.00	3.3	\$83.64	\$0.00	\$83.64
1B-Haines	\$68.80	\$29.60	3.3	\$50.45	\$4.48	\$54.93

1B- Skagway	\$88.80	\$40.00	3.3	\$66.91	\$0.00	\$66.91
2B - Haines	\$15.00	\$4.50	3.3	\$11.02	\$83.99	\$95.01
2B- Skagway	\$24.00	\$8.00	2.3	\$18.43	\$79.51	\$97.94
3- Haines	\$20.00	\$7.00	2.3	\$15.70	\$75.13	\$90.83
3- Skagway	\$22.00	\$7.50	2.3	\$32.76	\$79.61	\$112.37
<b>Fares and costs adjusted to reflect current Haines/Skagway AMHS fares:</b>						
2B- Haines	\$49.00	\$31.00	2.3	\$52.30	\$83.99	\$136.29
2B- Skagway	\$49.00	\$31.00	2.3	\$52.30	\$79.51	\$131.81
3 - Haines	\$49.00	\$31.00	2.3	\$52.30	\$75.13	\$127.43
3- Skagway	\$49.00	\$31.00	2.3	\$52.30	\$79.61	\$131.91

By using ferry fares that are not tied to the current AMHS fare structure, the agencies have skewed the analysis to make the road alternatives seem less expensive.

**RESPONSE:** For Alternatives 1 – No Action, 4A, and 4C, the fares were based on 2012-2013 AMHS rates in the Draft SEIS. For new routes that were shortened versions of existing AMHS routes, the AMHS fares were prorated by distance traveled. For new routes less than 20 miles, fares were based on a flat fee to board the vessel and a cost per mile for the transit for both passengers and vehicles. These fares were lower than the existing AMHS fares due to the efficiencies generated from using ferries designed as Day Boats with drive through loading and unloading and no reservation system expense, as well from the higher traffic volumes generated by frequent regularly scheduled service. Fares are commensurate with similar ferry systems in other locations operated in a similar fashion.

This fare structure is considered reasonable for alternative comparison purposes. The eventual fare structure used by AMHS for the chosen alternative may be different.

A memo documenting how the fares were developed has been added as an appendix to the Final SEIS at *Revised Appendix AA - Traffic Forecast Report*.

**Walk-on Ferry Service:** By eliminating walk on ferry services as a transportation mode DOT&PF has biased the alternatives in favor of a road. Near to 45% of Lynn Canal ferry users are walk-ons passengers and effect on these users is dramatic (McDowell 2000 report).

**RESPONSE:** DOT&PF would not eliminate walk-on service. Users under the road alternatives would be welcome to ride the ferries without vehicles. However, the road alternatives (2B and 3) represent a shift in the way transportation would be provided in the corridor—away from a primarily public transportation mode that would operate more like a public transit service, to a highway system where private vehicles

would provide most of the transportation (publicly owned shuttle ferries would provide shorter links connecting the roadways). DOT&PF and FHWA recognize that this shift would have had an effect on walk-on passengers. Sections 4.3.7.5 and 4.4.7.5 of the Draft SEIS described impacts to “Pedestrians and Bicyclists” for Alternatives 2B and 3, including walk-on passengers. As explained in Section 1.4.1.1 of the Draft SEIS, the State’s primary responsibility is to provide a transportation facility for vehicles, not the transportation itself.

The current walk-on cost (37\$ J to Haines-\$50 J to Skagway) as compared to the cost of getting public/private transportation to the Katzehin Terminal and the shuttle ferry costs adds up to \$150 more for a person using a taxi. For bus service or car rental its \$30 more per person.

RESPONSE: The Draft SEIS does describe the user costs for walk-on passengers. The road alternatives (2B and 3) represent a shift in the way transportation would be provided in the corridor—away from a primarily public transportation mode that would operate more like a public transit service, to a highway system where private vehicles would provide most of the transportation (publicly-owned shuttle ferries would provide shorter links connecting the roadways). DOT&PF and FHWA recognize that this shift would have had an effect on walk-on passengers. Sections 4.3.7.5 and 4.4.7.5 of the Draft SEIS described impacts to “Pedestrians and Bicyclists” for Alternatives 2B and 3, including walk-on passengers. The information included estimates of how many walk-on passengers might be affected and how they would be affected, including the anticipated changes in fares. Walk-on passengers are currently able to ride on a subsidized ferry for a long portion of the trip, and under Alternative 2B or 3 they would have needed to drive or take a cab, which would increase their total out-of-pocket cost. The fare for walking on would be less under Alternatives 2B and 3 than the current system because it would be a relatively short ride.

The travel time for passengers without a car will be longer under Alt 2B then on the no action Alt 1. This is based on the time getting a ticket, the time renting a car, the time waiting for a taxi and bus boarding, all the factors that are not part of traveling on a Lynn Canal Ferry.

RESPONSE: There are many factors that determine the travel time for a walk-on passenger. Under both Alternative 1 – No Action and Alternative 2B, walk-on passengers would need to purchase a ferry ticket and find a way to travel to/from the ferry terminal. AMHS policy is that passengers traveling without vehicles must check in 2 hours prior to departure in Bellingham and Juneau and 1 hour prior to departure at all other ports. Because of the drive through loading and unloading under Alternatives 2B and 3, travelers would not need reservations or arrive as early.

The commenter appears to overlook the time waiting for cabs or friends to drive them to the ferry terminal under the existing system, or any of the other alternatives, and seems to believe such waiting only occurs under Alternatives 2B and 3. Contrary to the commenter’s suggestion, walk-on passengers incur extra travel time for renting cars, waiting for cabs, etc. under any of the ferry alternatives because there is a road link at each end that necessitates a vehicle trip (only the Skagway Ferry Terminal is within reasonable walking distance of town, although if passengers have luggage or other carry-on goods it would be more

onerous). Under any scenario, walk-on passengers need to get to the ferry terminal, which requires them to find a ride or rent a cab, and they would be subject to the waiting time described by the commenter. If the commenter suggests that passengers walk to the ferry terminals, then considerable time would need to be added for walk-on trips for any of the alternatives.

Walk-on passengers who would rely on bus service to/from the Katzehin Ferry Terminal (if it develops) would have less flexibility and opportunity to travel compared to travelers who drive, as it is likely that bus service would not be available for every ferry sailing (i.e., walk-on passengers would need to time their travels with the bus schedule). It is anticipated that walk-on passengers relying on getting rides with others in private vehicles would have more flexibility and shorter travel times than those relying on the bus.

The mechanism for ticket sales for Alternatives 2B (Katzehin) and 3 (Sawmill Cove, William Henry Bay) would be determined during the design phase of the project. However, DOT&PF anticipates ticket sales would likely be on board the ferry and would not increase travel time.

DOT says public transportation will be available, ie. busses run by a private company. To make this cost effective for a 160 mile round trip (Auke Bay/Katzehin/Auke Bay) that company will have to run at a very high capacity or they will have to raise their rates. This idea (that's what it is) that a private bus service will be profitable raises a lot of questions. Will there be enough current foot passengers willing to pay more to use the busses if the ferry options are gone, and will Alt2b generate enough travel demand to make it profitable? Without definitive answers to these questions DOT&PF is making assumptions about private bus services being available. Given that 45% of ferry users are foot passengers and that they will have to pay more using the road alternatives some will cop out. If these passengers without vehicles continue to travel using Alternative 2b or 3, they will incur significantly increased out-of-pocket costs that are not considered in the DEIS. Deleting the option of getting on board a ferry, at lower cost than traveling by car or bus, has a huge effect on two of the Juneau Access Improvement Project's Purposes and Needs, reducing travel times and user costs. NEPA's requirement that an agency take a "hard look" at effects to the human environment has simply not occurred for 45% of existing AMHS walk-on passengers.

**RESPONSE:** The 45 percent walk-on rate used by the commenter is likely sourced in analysis by the McDowell Group reported in 2000. Based on AMHS information, DOT&PF believes the current percentage of walk-on passengers to be closer to 30 percent as the number of people walking on the ferry has declined over the past 15 years. Under Alternative 2B, a substantial segment of current walk-on traffic would be expected to convert to personal vehicle travel. Cost is currently the principal deterrent for ferry travel with a vehicle. As described in the *user benefit analysis* (Appendix FF), under the No Action and Enhanced Service (1B) alternatives, the round-trip cost for a driver and standard vehicle would be \$242. Under Alternative 2B, round-trip ferry costs for a driver and vehicle would be \$39 (Table A-13). Adding

vehicle operating costs to the comparison results in \$244 for No Action and Enhanced Service (1B) alternatives and \$80 for Alternative 2B. The substantially lower cost of travel under Alternative 2B would prompt many more travelers to take their own vehicles. Further, the substantial increase in vehicle traffic associated with Alternative 2B may increase opportunities for walk-on travelers to obtain a ride with family, friends, and acquaintances.

The vast majority of Lynn Canal region households have cars. For example, according to the U.S. Census Bureau's 2010-2014 American Community Survey 5-Year Estimates, 7.6 percent of Haines households do not have a vehicle available, 33 percent have one vehicle, 37 percent have two vehicles, and 23 percent have three or more vehicles. In Juneau, 8.5 percent of households do not have a vehicle available, 35 percent have one vehicle, 39 percent have two vehicles, and 18 percent have three or more vehicles.

More generally, the purpose of investment in public transportation infrastructure is to improve transportation opportunities for the largest number of people in the most cost-effective manner possible. It is not practical or reasonable to expect infrastructure improvements to enhance travel opportunities for all travelers, from all locations, and for all travel purposes. Replacing ferry service with a highway would require a change in travel behavior for some travelers, perhaps at some increased expense and inconvenience, while a much larger number of travelers would be able to travel at lower expense and greater convenience. The ten-fold increase in traffic from No Action to Alternative 2B would be the result of lower cost and more convenient travel opportunities for a much larger segment of the region's population.

DOT&PF and FHWA have evaluated the impacts to walk-on passengers and reported those in the Draft SEIS; including out of pocket costs. DOT&PF and FHWA find it likely (according to interviews with transit providers) that bus service would develop if there is sufficient demand and it is profitable to do so. DOT&PF and FHWA recognize that 91 percent of the households in Lynn Canal communities own vehicles. Many current walk-on passengers that own vehicles would likely choose to travel by car if a highway were available in the Lynn Canal corridor. The Draft SEIS described the impacts to those travelers who would choose to walk on. DOT&PF is not making an assumption that "private bus service will be available." The Draft SEIS indicated that a private ground transportation provider would be anticipated to offer service to the Katzehin Ferry Terminal if demand develops and it is shown to be profitable.

It reported that travelers without vehicles would be forced to rent or borrow vehicles, take a commuter flight, or travel on private carriers if they develop a service to accommodate this demand. Section 4.3.7.5 of the Draft SEIS and Section 3.1.4 of Appendix EE, *Socioeconomic Effects Technical Report* included an analysis of the potential for private ground transportation service to develop with Alternative 2B. To help clarify the out of pocket costs, additional information about the anticipated fares for the various travel markets (walk-on passengers, single drivers with a vehicle, etc.) has been added to the Final SEIS.

**Safety:** TGSC firmly believes that safety is a top priority for road building and DOT&PF needs to have it in the comparative alternative analysis. This is a social and economic issue and is directly related to NEPA's requirement to consider harm to the 'human' environment, ie. social and economic

harm.

RESPONSE: DOT&PF and FHWA agree with the commenter that safety is a top priority for road building. All roads constructed under State and federal authority must follow State and federal design procedures and standards that have been adopted/established to support safe travel. Many safety improvements have been added to Alternative 2B (e.g., avalanche mitigation) in the Draft and Final SEIS. Given the proposed roadway geometrics for Alternative 2B, there is no reason to believe that accident frequency on Alternative 2B would be statistically different than similar highways elsewhere in Alaska. Comparative safety analysis can be found in several locations in the SEIS. Information regarding traffic related accidents and fatalities was reported in Section 4.3.7 of the Draft SEIS. The safety of the alternatives were also disclosed for each of the alternatives in Chapter 4 of the Draft SEIS and Section 3 of Appendix EE, *Socioeconomic Effects Technical Report*; avalanche risks and mitigation can be found in Chapters 4 and 5 of the Draft SEIS and Appendix Z – *Update to Appendix J, Avalanche Technical Report*.

The existing AMHS system has had no fatalities since 1975, making the road alternatives appear to be less safe than the ferry alternatives. While the AMHS is safe, it does have the potential for catastrophic incidents due to the high number of people on a ferry and the hazards of ocean travel in Alaska. Ferry incidents tend to occur less frequently, but if they do they can be severe, making it difficult to compare the safety of highway and ferry alternatives. While travel in private vehicles tends to be less safe than some other modes of travel, Americans routinely select that mode of travel because of the advantages of convenience, cost, and travel time. Alternatives 2B and 3 would create a transportation system in Lynn Canal that provides these same advantages but with a safety risk inherent in private automobile travel.

Forty-one avalanche chutes line the road route that DOT&PF has chosen as the preferred Alternative. This is a major safety issue. Mitigation includes constructing snowsheds and using explosives to bomb avalanche paths with helicopters when it is clear and calm enough. What is missing in the SDEIS are the hazards from rock slides.

RESPONSE: The *2017 Update to Appendix D - Technical Alignment Report* in Appendix Z of the Final SEIS includes a discussion of geotechnical hazards. Each identified hazard was tabulated to show the associated mitigation condition based on the current design.

Rock Slides: The 2006 EIS identified 99 geological hazards on the east side route. On the current Juneau road system rock slides happen often, particularly where the road has a steep slope. The east road alternative is designed with steep slope alignments. This is not only a safety issue but also a maintenance cost issue that needs to be included in the EIS cost benefit analysis. Costs include moving the debris, rocks and boulders from the road and hauling them to disposal place. Leaving out the maintenance costs associated with rock hazards for Alternative 2b makes it look more cost efficient than the marine alternatives.

RESPONSE: Highway clean-up costs are typical highway maintenance costs that have been accounted for in alternative maintenance costs and are reflected in Attachment C of the *2017 Update to Appendix D - Technical Alignment Report*.

This is a NEPA flaw. Rock slide hazards can happen summer, fall, winter, and spring. This is a potential road closure issue that should be analyzed and put into the road closure numbers.

RESPONSE: Based on the current design, inadvertent road closures may occur over the lifetime of the project. It is expected that these closures would require less than half a day to clean up. It is also expected that in the event of a full width road closure, single lane traffic would be restored within 2 hours and 2-lane traffic would be restored within half a day. This is consistent with closures experienced on other Alaska highways with similar terrain.

If Alternative 2B had been selected in the Record of Decision, during the final design phase, hazard areas along the highway corridor that were not already avoided with alignment shifts and could potentially close the road would be examined in greater detail. With the goal of eliminating or minimizing road closures to the extent possible, detailed mitigation measures would be designed after more data and a refined understanding of each hazard could be obtained. There is, however, always the possibility of a large anomalous event. These rare events occur on highways through mountainous terrain common in states like Alaska, Washington, Oregon, Colorado, Montana, and Wyoming.

Shoulders: The 4 foot paved shoulder designed for Alt2B provides only minimal room for bicycle travel along the road. Any vehicles pulled over into the shoulder will block bicyclists, forcing them far into travel lanes creating possible fatalities and serious harm. Bicycling, particularly out the road, is a major recreation activity in Juneau. Safe bicycle paths, 6 feet wide, are being added to Juneau roads all over the road system, but not for the road to Katzehin. The 4 foot paved shoulder designed for Alt2B provides only minimal room for bicycle travel and pedestrians along the road. Any vehicles pulled over into the shoulder will block bicyclists, forcing them far into travel lanes. Conversely, bicyclists occupying the too narrow shoulder will increase the likelihood of vehicle-bicycle collisions. Wider lanes and shoulders would decrease the potential for accidents involving bicycles and pedestrians.

There is no discussion in the DSEIS of the AASHTO guidance based on 400 to 1,500 ADT for shoulder width. All projected Annual Daily Travels (ADT) for Alt2B are above 400, and the winter ADT of 1,345 approaches the upper limit for a 6 foot shoulder. AASHTO Standards are that rural arterials with average daily traffic (ADT) less than 400 that have travel lanes 11 feet wide and Design Speeds from 40 to 55 mph, a 6-foot-wide usable shoulder should be considered. (Apdx, D-p.5).

DOT&PF is putting construction costs before safety.

RESPONSE: The shoulder width for Alternatives 2B and 3 is an exception to the American Association of State Highway and Transportation Officials (AASHTO) recommended standard of 6 feet. A 4-foot-wide shoulder was determined to be best suited for the rugged terrain that the highway would cross. Cost was a consideration as well as the amount of use the shoulder would likely receive. Moreover, it would reduce impacts to wetlands while also satisfying the intended function of a shoulder. The typical section shows that wider shoulders would be created with excess material in upland areas. These widened areas, turnouts, and no parking signs in particular areas, would minimize parking on the paved shoulders. The widened shoulders have traversable slopes that would provide adequate space for vehicles to pull off the roadway onto the shoulder if necessary. The typical section for highway alternatives would match the width to be constructed on Glacier Highway from Amalga Harbor Road and Besse Creek. Given that there are no documented accidents over the 5 year period between 2011 and 2015 involving bicyclist and pedestrians on this stretch of Glacier Highway supports DOT&PF's assessment that a 4-foot-wide paved shoulder would be adequate to safely accommodate bicyclists and pedestrians on Alternative 2B and 3.

Note, the Draft SEIS reported the Alternative 2B summer average daily traffic (ADT) to be 1,345 and the winter ADT to be 460.

Policing and Emergency Response: Police try to control speed, drunk driving, and other safety issues. At the time of this DEIS there is zero commitment from Juneau, Haines, Skagway, and the State to provide policing. Apx EE *"As with any rural Alaska road system, emergency situations occurring far from downtown areas would create response challenges for fire, emergency medical service, and police departments. Personnel and equipment would be pulled away from normal duties, possibly for extended periods. The agencies with the most resources available - State Troopers, Juneau Police Department, and Juneau Fire Department - say they are already operating at minimal staffing levels given the extent of their current responsibilities and service areas."* If it is provided there will be needed more Troopers and police cars, a cost to the state and cities. There is no answer to who will pay for policing and what the cost will be, a flaw in the SDEIS. Emergency responders, ambulances volunteers, can't respond in hazardous conditions such as roads blocked by snow, ice and rocks in a prompt and safe way. DOT&PF has not put out a practical solution for this in the SDEIS because there is none.

Even in normal conditions the money to provide emergency services will have to come from somewhere and DOT&PF has not been specific about that cost. Cell phone access to report a problem will probably not be available in some parts of the Alt 2b road unless cell phone towers

are provided. This is based on the poor cell phone connections while traveling on the ferry. However the ferries have the best marine phone and internet connectivity.

**RESPONSE:**

Statewide, the Alaska State Troopers are responsible for general policing, patrols, and emergency response along rural roads, particularly outside the areas associated with individual local governments. Alternative 2B falls partially in the City and Borough of Juneau (about 30 road miles north of Echo Cove to Eldred Rock) and partially in the Haines Borough (from Eldred Rock northward). The Alaska State Troopers were contacted and indicated that, under Alternative 2B, the primary response would come from State Troopers based in Juneau. The Alternative 3 road on the west side of Lynn Canal lies within the Haines Borough. Under Alternative 3, the primary response would come from State Troopers based in Haines<sup>1</sup>.

The SEIS indicates that it is likely that emergency medical response would come from these communities. Section 3.1.4 and sections in Chapter 4 corresponding to the socioeconomic impacts for each alternative provide basic information about services provided at each community and disclose the potential impacts to the service providers of having more road miles and more traffic within their areas of responsibility (see also Appendix EE, Section 3.3). Fire protection outside local fire service areas (i.e., along these road routes) is provided by the Alaska Division of Forestry and Tongass National Forest. Haines, Skagway, and Juneau all have search and rescue capabilities, either through separate organizations or through their fire/rescue departments, or both. Overall, staffing of public safety is anticipated to remain the same as it is today under all alternatives.

Icy roads: Icy roads are another safety and maintenance cost issue that is not dealt with adequately in the SDEIS. Every winter in Juneau numerous crashes happen because of icy roads but there is no correlation between what happens in Juneau and what could happen on the east road expansion. The cost of keeping the roads clean and safe from frozen road conditions needs to be in the cost/benefit analysis. Ice melt cost, sand cost, trucking costs, driver over time, fuel costs, how many new trucks will be needed because there's barely enough in Juneau to keep Juneau roads clean now. As with the rock hazards leaving this out of the road cost/benefit analysis makes the road alternative look more cost efficient compared with the marine alternatives.

**RESPONSE:** The cost of providing winter maintenance is presented in Attachment C of the *2014 Update to Appendix D - Technical Alignment Report* in Appendix Z of the Draft SEIS. Costs for avalanche mitigation were provided in Appendix 11 of the *2014 Update to Appendix J - Snow Avalanche Report* in Appendix Z of the Draft SEIS. The User Benefit Analysis includes maintenance and operations costs associated with winter maintenance, avalanche, and rock hazard mitigation.

The maintenance cost for the highway was estimated using actual costs incurred by DOT&PF for highway

---

<sup>1</sup> As of January 2018, the Alaska State Trooper position in Haines is vacant.

maintenance. Additional personnel, equipment, and materials were included in the estimate to provide for responses to avalanches and landslides. Because of the addition of extra resources to address conditions expected on the Juneau Access highway, the estimate shows the cost per mile to maintain the highway to be approximately 190 percent higher than DOT&PF's current average maintenance cost per mile in Southeast Alaska.

The project's planning process included extensive study of the geological conditions and weather on the proposed route. Highway design engineering would mitigate many of the hazards, if a roadway alternative were selected. Significant additional assets have been added to the maintenance concept to provide personnel and equipment to deal with potential road closures.

And besides the closure of the road due to avalanches and rock slides, icy road conditions will likely add to more road closures. Also very high velocity winds that roar down through the Lynn Canal corridor add to the risk of driving the 2b during icy road conditions.

**RESPONSE:** The project's road alternatives would be similar during adverse weather conditions to other highways in Southeast Alaska. Sufficient maintenance assets are included in the maintenance concept for Alternative 2B, including a maintenance station facility, which would improve response times under adverse weather conditions.

Divided Highway: Many lives have been lost on the Seward Highway, a road that shares similarities to the proposed Katzehin road. Since 2006, planners and residents at numerous public meetings have been calling for a divided highway as the best and most effective engineering enhancement on the Seward Highway. The DSEIS should analyze the cost/benefits of making the road to Katzehin a divided highway to improve safety.

**RESPONSE:** Safety comparisons to the Seward Highway outside of Anchorage are not applicable. While the Seward Highway traverses along the coast and has several avalanche zones, the comparison ends there. The Seward Highway has considerably higher traffic volumes (7,000-10,000 ADT) as compared to Alternative 2B (835 ADT [2020] reported in the Draft SEIS). This high level of traffic, coupled with limited passing opportunities, contributes to heavy congestion and causes travelers to make unsafe maneuvers. With less than one-tenth of the traffic, this project is not anticipated to cause similar driving behavior. The traffic forecast does not anticipate reaching anywhere near the levels necessitating a 4-lane highway facility.

TGSC says again safety should be in the Purpose and Need of the Juneau Access Project.

**RESPONSE:** Safety is included in the purpose and need statement for a project only if there is a demonstrable safety problem on the transportation link being considered. An example would be where

there is a higher number of accidents than the State average for similar transportation links. Safety is not a problem with the current system; therefore, it is not a stated purpose and need for this project.

### **The comparison of the Seward Highway for Alternative 2b road safety issues:**

The thirty mile stretch of Seward Highway from MP17 to MP87 was designated a Traffic Safety Corridor (TSC) in 2006, leading to enhanced safety measures:

These included 12 foot lanes, center and shoulder rumble strips, high intensity reflectors installed on guardrails, divided highway sections, separate bike trails, passing lanes, emergency call boxes, six and eight foot shoulders that makes roads much safer for cars, bikes, and walkers, and increased police patrolling. Emergency response time is quicker because of adjacent emergency services from Anchorage and Girdwood.

Alternative 2b road to Katzechin: Two 11-foot lanes, with 4 foot paved shoulders, regular patrols of highway segments between Echo Cove and Haines not anticipated by State Troopers, Juneau PD, or Haines PD (Apx EE-p.207). Emergency response times will be higher especially at Katzechin which is far from Juneau and takes a ferry to get there from Haines. Specifically up to 50 miles away from Auke Bay, Juneau, or from Haines via boat, then up to 20 miles away. Unlike the Seward Highway cell phone access will probably not be available in some parts of the Alt 2b road unless cell phone towers are provided.

**RESPONSE:** Safety comparisons to the Seward Highway outside of Anchorage are not applicable. While the Seward Highway traverses along the coast and has several avalanche zones, the comparison ends there. The Seward Highway has considerably higher traffic volumes (7,000-10,000 ADT) as compared to Alternative 2B (835 ADT [2020] reported in the Draft SEIS). This high level of traffic, coupled with limited passing opportunities, contributes to heavy congestion and causes travelers to make unsafe maneuvers. With less than one-tenth of the traffic, this project is not anticipated to cause similar driving behavior. The traffic forecast does not anticipate reaching anywhere near the traffic levels experienced on the Seward Highway; therefore, it is incorrect to predict that upgrades would be necessary within the forecast period. Alternative 2B would be designed to meet appropriate safety standards.

Using Anchorage and Fairbanks as end points for an example of city pairing, unconstrained travel demand, and relating it to the Alternatives 2b and 3 is very misleading. Unlike the Juneau Road Alternative's 2b and 3 there is a major destination end point between Anchorage and Fairbanks, the Denali National Park, and town's in-between. Many travels are going from Anchorage to Denali and back to Anchorage and from Fairbanks to Denali and back to Fairbanks not from Anchorage to

Fairbanks or from Fairbanks to Anchorage. The only stop off point between Juneau and Haines for Alternative 2b is an unmanned ferry terminal where travelers wait in line.

RESPONSE: The unconstrained travel demand model did not use Anchorage and Fairbanks as “endpoints for an example of city pairing.” The forecast used other similarly situated communities in Alaska (both regional center communities like Anchorage, Fairbanks, and Juneau and other, more isolated coastal communities like Haines and Skagway) and Western Canada with similar geographic characteristics as Juneau, and examined their trip-making patterns on the highways leaving those communities. The model does not estimate or rely on trips interchanging “between” Anchorage and Fairbanks or between an intermediate stop like Denali Park. As is explained in Appendix AA, *Traffic Forecast Report*, the cities were used to gauge the edge effect of travel from these centers. The analysis found a strong correlation between the distance traveled from the edge of the community and the way traffic volumes dissipate. Appendix AA describes this edge effect as “the point traffic volumes decrease exponentially until leveling off at a particular volume.” It is not, as the commenter suggests, about the interchange of traffic. As can be seen in Figure 4-3 from Appendix AA, the edge effect on the Parks Highway (from either Fairbanks or Anchorage) occurs at a much shorter distance than Denali National Park.

As described in Appendix AA (and in more detail in its Appendix C), the model selected cities that were comparable in size and characteristics to Juneau, the primary difference being that each of these cities have a road connection. The model showed very consistent traffic dissipation patterns based on the distance removed from the city (see Figure 4-3 of Appendix AA). These patterns were similar for isolated communities such as Valdez and larger communities such as Anchorage and Fairbanks. Related to a comment regarding the possible effects of Denali National Park demands along the Parks Highway, the dissipation curve shows that the traffic patterns along the Parks Highway are very similar to those of the other highways, despite the location of the park.

The traffic forecasts used a conservatively low range of ‘edge’ traffic rates (see Table 4-5 and Figure 4-1 of Appendix AA) for the Juneau traffic estimates. While the population of Juneau more closely matches some of the smaller communities shown in Table 4-5 of Appendix AA (each of which have much higher edge traffic rates), the range of rates used in the forecasts were balanced between those of Whitehorse and Anchorage/Fairbanks. The forecasted rates for Skagway and Haines were based on their existing observed rates.

The discrepancies between the two roads in the safety comparison analysis makes it pretty much useless, and the Alt 2b road crash and fatality numbers a bad comparison, and perhaps flawed, and probably under estimated.

**Fatalities:** DOT&PF estimates 5 crash car deaths on the average of thirty years on the Alt 2b route. The numbers are from a comparison with the average fatalities on Alaska's Seward Highway. TGSC and other groups believe these numbers may be miss-calculated and some number crunching was done.

DSEIS total crashes per year = 22. Recalculated = 22.5.

DSEIS fatalities per project lifetime (30 years) = 5. Recalculated = 14.64

What is missing in DOT&PF's over generalized analysis is the increased risk of fatalities from specific hazards such as avalanches, icy conditions, and rock slides. It is impossible to get a hand on what deaths will be caused by what conditions and what hazards on the Juneau Road to Katzehin and then to do an evaluation of the numbers. Even in DOT&PF's over generalized fatality analysis TGSC believes the deaths have been under estimated. Not with intent but with internal bias within DOT&PF to favor the road. In Juneau alone in one year there are more crashes per year than DOT projects in the Alt 2b 36 year lifetime model, many by icy road conditions. The Juneau road system has full time maintenance, 24 hours a day when needed, and the weather conditions are not as harsh as the proposed expansion of the Juneau Road. Emergency services to deal with crashes are going to be very hard to serve out the road. This is not apples to oranges but anyone who drives Juneau roads when they are iced up has to speculate about DOT&PF's estimate. Fatalities are so important that morally and for the purposes of NEPA DOT&PF should have outside independent consultants analyze the issue.

**RESPONSE:** Information regarding Alternative 2B traffic related accidents and fatalities was discussed in Section 4.3.7 of the Draft SEIS. However, this information had some errors and has been updated for the Final SEIS. Section 4.3.7.5 discusses traffic safety impact associated with Alternative 2B. Alternative 2B is anticipated to have a similar accident rate to other rural Alaska highways. In 2025, Alternative 2B is anticipated to have approximately 39 crashes per year on the East Lynn Canal Highway. During the 30-year operating period (2025-2055), it is estimated that Alternative 2B would result in approximately 1,156 crashes and 14 traffic fatalities.

Alternative 2B includes an additional staffed maintenance station at approximately Mile Point 66. This station would have one full time foreman/operator and four seasonal positions (avalanche control). The Juneau Maintenance Station would be augmented with one full-time operator and one seasonal position, to assist in maintaining the highway from Juneau to Cascade Point. Juneau Station would also assist with avalanche clean up from time to time. This level of staffing provides 7-day per week winter maintenance, including avalanche control and clean up, as well as summer maintenance activities.

**Up-Grades:** Safety and construction up-grades are issues that should be dealt with in the SDEIS as it is a lifetime cost issue for Alt 2b and Alt 3. Construction up-grades include repairs and replacements. Alt 2B maintenance and operation (M&O) costs do not include repair or replacement costs as it should be. DOT&PF has repeating up-graded roads because of identified safety issues, sometimes designating them as a Traffic Safety Corridors (TSC) which triggers safety up-grades. The Glacier Highway (GH) which has been re-designed and extended (including the Cascade Point Road) to

connect to the Alt 2b road was recently up-graded to twelve foot lanes and five foot shoulders, or eleven foot lanes with six foot shoulders, out the road from Auke Nu to Echo Cove, the beginning of 2b. This up-grade is considered by the TGSC as part of getting ready for the JA project. It is highly probable that the 2b road will be made to conform to the GH up-grades and the cost should be part of the 36 year lifetime model. Otherwise DOT&PF should say it will not be done.

The Alt 2b road going from Echo Cove to Katzehin and the Seward Highway have the same problems identified in our safety section and the Seward Highway is a DOT&PF designated Traffic Safety Corridor (TSC). The Seward highway up-grades have cost \$35 million with \$410 million additional engineering improvements scheduled through 2018, pending available funds. It is highly likely that the Eastside Lynn Canal Rd. (Alt 2b) will become a TSC. That safety upgrades is left out of the lifetime cost model on a road that is designed at the lowest safety standards that DOT can possibly get away with before it's a TSC is disingenuous and should be rectified.

In Alt 2b five tunnels will be constructed, two will be blasted through the Kazhan Mountains, and three snow sheds will be constructed to protect drivers from avalanches. Snow sheds are by common sense at a high risk of being destroyed by avalanches. Tunnels are expensive to build and more expensive to replace. Up-grades of existing tunnels and bridges are common when the connecting roads are being widened or re-routed. This is very likely to be needed in the 36 year time frame of Alt 2b. The likelihood of these structures having to be replaced and the cost therefore should be calculated and used in the user/cost benefit analysis. There are many examples that could be used, such as the current Brotherhood Bridge up-grade in Juneau which is basically a replacement, to calculate the potential costs and many more are in DOT&PF's data base. TGSC believes that not including up-grades in the cost benefit analysis is misleading the public on the long term costs of the road alternatives.

A highway is repaired and replaced as needed indefinitely with higher and higher costs well beyond 36 yrs. It's also worth noting that the average age of ferry vessel replacement is 60 years (App GG), considerably longer than 36 yrs.

**RESPONSE:** The upgrading of Glacier Highway is an independent project and should not be considered preparation for the Juneau Access Improvements project. The upgraded Glacier Highway has the same typical section as the Juneau Access Improvements project, with 11-foot lanes and a four-foot shoulder

(not the lane/shoulder configuration suggested by the commenter). The design geometrics being used on the Juneau Access Improvements project are appropriate for a rural highway with less than 2,000 ADT.

Regarding safety, comparisons to the Seward Highway outside of Anchorage are not applicable. While the Seward Highway traverses along the coast and has several avalanche zones, the comparison ends there. The Seward Highway has considerably higher traffic volumes (7,000-10,000 ADT) as compared to Alternative 2B (835 ADT [2020] reported in the Draft SEIS). This high level of traffic, combined with limited passing opportunities, contributes to heavy congestion and causes travelers to make unsafe maneuvers. With less than one-tenth of the traffic, this project is not anticipated to cause similar driving behavior. The forecast does not anticipate reaching anywhere near the levels experienced on the Seward Highway; therefore, it is incorrect to predict that upgrades would be necessary within the forecast period.

The highway alternatives (2B and 3) would be designed and constructed to meet appropriate safety standards within its design life. They would meet the AASHTO standards for rural arterials for the traffic volumes projected for the proposed project, with the exception of shoulder width for Alternatives 2B and 3. The highway design does include safety measures such as widened embankments, guardrail, recessed pavement markers, paint, and signage. The Alternative 2B 2050 traffic projection in the Draft SEIS is 825 ADT. The roadway design being used on the Juneau Access Improvements project are appropriate for a rural arterial highway with less than 2,000 ADT, substantially more traffic volume than forecasted. Extensive safety upgrades are not anticipated.

#### **Essential Fish Habitat:**

NEPA requires public officials to have high quality and accurate information prior to decision-making (See 40 CFR 1500.1(b)).

#### **AppendixZ\_UpdateN\_EFHAssessment 4.2.1.3 Effects of Ferry Terminal Construction in Alt 2b:**

"There would be no change in EFH impact associated with ferry terminal construction, as previously documented in Section 2.1.1 of the 2004 *Essential Fish Habitat Assessment* and the 2005 *Addendum to Appendix N -Essential Fish Habitat Assessment*." The 2004-2005 Essential Fish Habitat Assessment for ferry terminals was only for Berners Bay terminals. There is no data for the effects on Essential Fish Habitat from the Katzehin terminal.

To date there has been no data collection on Eulachon or Herring spot spawning and biomass at the Katzehin Delta such as has been done from Auke Bay to Comet Beach for years, mainly by ADFG and from a response to an ESA petition. The petition was submitted by the Juneau Group of the Sierra Club. The data could have been easily collected by expanding the area surveys that ADFG uses monthly to get data for fishing regulations in Lynn Canal. There has been more than enough time for DOT&PF to ask for the data from a cooperating agency such as ADFG. NEPA

requires that agencies gather and use relevant and available science before decision making 40 CFR 1500.1(b)). This gap of information makes it impossible to have a rigorous analysis of the effects of Alternative 2b on essential fish habitat at the Katzehin Delta. As noted before there was ample time to gather data on EFH, more than four years, to fill the gap.

An example of how data can be corrected is the monthly/weekly herring up-dates done by ADFG. Note that no surveys have been done at the Katzehin Delta.

RESPONSE: FHWA has coordinated with the National Marine Fisheries Service (NMFS) on the project since 1994, and continues to coordinate with the NMFS on the Essential Fish Habitat (EFH) assessment, Endangered Species Act (ESA) Section 7 consultation, and Marine Mammal Protection Act authorization (eulachon and herring are prey species for ESA listed species and marine mammals). NMFS provided comments on the Draft SEIS EFH Assessment, requesting minor clarifications. The EFH assessment is updated by errata and included in the Final SEIS. Section 4.3.13 of the Draft SEIS noted that EFH is present within the Katzehin River delta area. Surveys have been conducted at the site that confirmed the presence of Pacific herring and eulachon in the Katzehin River delta. The analysis in the Draft SEIS considered the presence of these species and the potential impacts from project activities on these species.

JUNEAU HERRING UPDATE #9

The department conducted aerial surveys of Seymour Canal, Tenakee Inlet, and Lynn Canal Monday, May 5, 2014. Survey conditions were good to excellent with calm to light winds and sunny skies.

**Seymour Canal:** Approximately 0.8 nautical miles of active spawn was observed inside Glass Peninsula north and west of Port Hugh. Two small schools of herring were observed in Blackjack Cove and one small school was observed outside Sorethumb Cove. 144 sea lions and 1 whale were observed with the majority of predators from Point Hugh to Blackjack Cove. The Seymour Canal herring gillnet fishery opened at 3:00 p.m., Wednesday, April 30, and active fishing was completed on May 4. The harvest is confidential due to less than three processors participating. The cumulative amount of documented spawn is currently 4.0 nautical miles.

**Tenakee Inlet:** No spawn or herring were observed on today's survey. A total of 7 sea lions and no whales were observed along the south shore of the inlet from South Passage Point to Crab Bay in good spotting conditions. The vast majority of SOK fishermen harvested their pounds on May 3 and the remainder finished harvesting on May 4. Thirty-three total pounds were fished by 71 permit holders. The cumulative amount of documented spawn is 2.0 nautical miles.

**Lynn Canal:** No spawn was observed on today's survey. One small school of herring was observed just outside Tee Harbor and two small schools were seen inside Auke Bay. 32 sea lions and three whales were observed with the majority of predators concentrated between Benjamin and Mabb Islands. Two small schools of what appeared to be eulachon were observed inside Echo Cove and gull numbers and activity had increased significantly from previous surveys on the Berners flats although no schools of eulachon were observed. The cumulative amount of documented spawn is 3.5 nautical miles.

**2014 Juneau Area Survey Summary**

**Seymour Canal**

April 14: No herring activity; 49 sea lions, 1 whale. April 18: No herring activity; 77 sea lions, 5 whales. April 22: No herring activity; 88 sea lions, 1 whale.

April 25: No herring activity; 166 sea lions, 9 whales.  
April 27: 3 small schools of herring near Pt. Hugh Light; 215 sea lions, 7 whales. April 28: 2 small schools of herring near Sorethumb Cove; 241 sea lions, 9 whales. April 29: No herring activity; 83 sea lions, one whale.  
April 30: 0.7 nm spawn; no herring schools; 128 sea lions, 7 whales \_  
May 1: 1.3 nm spawn; 120 sea lions, 6 whales  
May 3: 0.3 nm spawn; scattered predators.  
May 4: spot spawns, scattered predators  
May 5: 0.8 nm active spawn, three small herring schools; 144 sea lions, 1 whale

#### Tenakee Inlet

April 14: No herring activity; 75 sea lions, 5 whales.  
April 18: No herring activity; 63 sea lions, no whales.  
April 22: No herring activity; 28 sea lions, no whales.  
April 25: No herring activity; 69 sea lions, 6 whales.  
April 27: Numerous schools of herring between Strawberry Island and Crab Bay; 46 sea lions, 2 whales.  
April 28: Two spot spawns and one school of herring on east Kadashan; 62 sea lions, 3 whales.  
April 29: 2.0 nm spawn, no herring schools; 62 sea lions, 3 whales. April 30: 0.25 nm spawn, no herring schools; 34 sea lions, no whale.  
May 1: Spot spawn, no herring schools.  
May 3: No herring activity.  
May 5: No herring activity; 7 sea lions, no whales

#### Lynn Canal

April 14: No herring activity; 85 sea lions, 3 whales.  
April 18: No herring activity; 61 sea lions, 3 whales.  
April 22: No herring activity; 91 sea lions, 3 whales.  
April 25: No herring activity; 115 sea lions, 7 whales.  
April 28: 0.7 nm spawn, school of herring in Bridget Cove; 218 sea lions, 7 whales.  
April 29: 2.0 nm spawn in Bemers Bay, no herring schools; 110 sea lions, 2 whales.  
April 30: 1.0 nm spawn in Bemers Bay, herring schools in Indian Cove; 144 sea lions, no whales. May 1: 0.9 nm spawn; 132 sea lions, 1 whale.  
May 2: No herring activity.  
May 5: Herring schools outside Tee Harbor and inside Auke Bay; 32 sea lions, 3 whales.

<http://www.adfg.alaska.gov/static/applications/dcfnewsrelease/403191294.pdf>

<http://www.adfg.alaska.gov/index.cfm?adfg=commercialbyareasoutheast.herring#/static/applications/dcfnewsrelease/403191294.pdf>

Given the importance of the habitat to be filled at Katzeihin River for fish, and the importance of fish for nearby Steller sea lion critical habitat at Gran Point, the DSEIS should analyze the effects of the increased fill at Katzeihin River. However, this analysis is impossible to find.

The Wetlands Report avoids the analysis by stating that "[i]mpacts to fish habitat as a result of this fill are discussed in the *2014 Update to Appendix N - Essential Fish Habitat Assessment*." DSEIS App. Z Update to O at 14 (Wetlands Report at 14). Turning to the Essential Fish Habitat Report, the only discussion of Katzeihin River is in a section concerning effects to essential fish habitat at Slate Creek, where the "adverse effects on [Essential Fish Habitat] prey resources" are apparently mitigated by the fact that "Eulachon also use the Katzeihin River for spawning." DSEIS App. Z Update to N, Attachment A at W- 217 (Essential Fish Habitat Assessment), Attachment A at W-217). Attachment C of Appendix N describes some potential impacts to eulachon generally, such as acknowledging that

bridge construction, maintenance, and use has the potential to degrade eulachon spawning habitat, App. N, Attachment C at ii, but there is no site-specific analysis of the long-term effects at the only estuarine habitat to be filled under current plans for Alternative 2B.

RESPONSE: The addition of fill, proposed since issuance of the 2006 ROD in intertidal and subtidal areas, was meant to address concerns related to scour at the Katzehin River bridge abutment for Alternative 2B. This would result in placement of additional materials and an overall increase of 0.64 acre of fill within the Katzehin River intertidal area, 0.55 acre of which would affect EFH. Construction and long-term effects to EFH from the ferry terminal north of the Katzehin River were evaluated in Sections 5.4.1.2, 5.4.2.3, and 5.4.2.4 of the 2004 *Essential Fish Habitat Assessment* and Sections 2.1.1 and 2.1.2 of the 2005 *Addendum to Appendix N -Essential Fish Habitat Assessment*. The site specific effects of the increased fill on EFH in this area have been added to Section 4.3.13 of the Final SEIS. The realignments of Alternative 2B since 2004 have reduced EFH impacts associated with highway fill and crossing structures for the Antler, Berners/Lace, and Katzehin Rivers. As stated in Section 4.2.2 of the 2014 *Update to Appendix N*, 25.5 acres of intertidal and subtidal fill is a small portion of the available habitat in Lynn Canal and would have minimal effects on the EFH available in Lynn Canal.

The only mitigation proposed for Katzehin River addresses construction, which will be timed to avoid sensitive life stages of fish. DSEIS App. N at 5-6; DSEIS App. Z Update to N, Attachment A at W-225 (EFH Assessment, Attachment A at W-225); DSEIS App. Z Update to App. S at 27 (SSL Report at 27).

RESPONSE: In the 2006 Final EIS, DOT&PF committed to \$780,000 in-lieu fee compensation to offset unavoidable adverse impacts to intertidal and subtidal marine waters (EFH). In 2008, DOT&PF provided \$324,000 to construct the Yankee Cove project, which established two artificial reefs to enhance habitat important to spawning and rearing fish, including Pacific herring and marine invertebrates. FHWA determined the balance remaining (\$456,000), in addition to the in-water work timing window to avoid sensitive life stages of fish (March 15 through June 15) and other measures described in Chapter 5 of the Draft SEIS, would provide adequate mitigation for Alternative 2B (preferred alternative in the Draft SEIS) impacts to marine resources. The No Action Alternative (preferred alternative in the Final SEIS) would not result in new impacts (i.e., the effects of ongoing operations would be the continuation of conditions described in the Affected Environment section of the SEIS); therefore, no mitigation is required or proposed under the No Action Alternative.

Furthermore, there are potential cumulative impacts on the Katzehin River and nearby eulachon which have not been explored. Sanitary wastewater will be discharged at the nearby Katzehin ferry terminal. DSEIS App. Z Update to N, Attachment at W-217 (EFH Report, Attachment A at W-217).

RESPONSE: Sections 4.3.13, 4.4.13, and 4.6.13 of the Draft SEIS considered discharges of sanitary wastewater from new ferry terminals as well as marine vessels, leakage of fuels and lubricants from

marine vessels, and the potential effects on fish. They also described effects on habitat from the shoreline development of the ferry terminals. Water quality effects and shoreline development are not expected to affect overall populations of aquatic species.

"Because their habitat distribution and use of near shore areas is unclear, it is unknown whether eulachon would be affected by habitat alterations associated with ferry terminal construction activities at the Katzehin site." DSEIS App. N at 5-14.

By avoiding analysis of the site-specific effects of filling estuarine habitat at Katzehin River on salmon, eulachon, and the Steller sea lions which depend on them, the DSEIS fails to ensure that there are no unacceptable environmental effects similar to those which caused the agencies to rule out Alternative 3 as a practicable alternative.

RESPONSE: Construction and long-term effects to EFH from the ferry terminal north of the Katzehin River are evaluated in Sections 5.4.1.2, 5.4.2.3, and 5.4.2.4 of the 2004 *Essential Fish Habitat Assessment* and Sections 2.1.1 and 2.1.2 of the 2005 *Addendum to Appendix N -Essential Fish Habitat Assessment*. The site specific effects of the increased fill on EFH in this area have been added to Section 4.3.13 of the Final SEIS.

Because the DSEIS is intended to satisfy the agencies' NEPA obligations for the Clean Water Act § 404 permit, the analysis for the impacts to wetlands caused by the preferred alternative should be at least as rigorous as the analysis for effects caused by discarded alternatives.

RESPONSE: The analysis for wetland impacts in the Draft SEIS was sufficiently rigorous and provided an appropriate level of information for comparison of all alternatives. The analysis presented in the 2014 *Update to Appendix O – Wetlands Technical Report* in Appendix Z of the Draft SEIS described the potential impacts to wetlands from all current project alternatives. The wetland mapping refinements that occurred to Alternative 2B after the 2006 ROD were minimal and did not change the order of magnitude of wetlands present. The minor refinements made to the Alternative 2B alignment during the U.S. Army Corps of Engineers permitting process were based primarily on other environmental constraints (e.g., bald eagle nests, geotechnical surveys, etc.). Due to the abundance of wetland resources in the region, these changes do not alter the degree of wetland impacts. Small-scale refinements that may result from additional ground surveys of wetlands for Alternative 3 (as completed for the permitting process for Alternative 2B) would not substantially change the practicability or degree of wetland impacts for Alternative 3.

## Apdx EE: The Socio Economic Effects Report is unreliable

### ES 1.1 Alternative 1-No Action

According to the 2014 Juneau Access *Traffic Forecast Report* (Appendix AA of the 2014 JAI Project Draft SEIS), the No Action Alternative is anticipated to generate 90 annual ADT in 2020 *ES 1.3 Alternative 2B -East Lynn Canal Highway to Katzehin, with Shuttles to Haines and Skagway*

#### ES 1.3.1 General Effects

**Transportation:** The East Lynn Canal Highway would improve Lynn Canal transportation and would generate traffic in Lynn Canal of between 835 vehicles per day (annual average) in 2020, more than five times more traffic than would occur with the No Action Alternative.

The up-tick of vehicle travel use between the no action alternative and the 2b alternative is based on the uncertain unconstrained travel forecast model and therefore there is no verification of the numbers.

RESPONSE: All traffic demand models attempt to predict future demand based on assumptions and data available in the present. To the extent that they are predicting a future, unknown condition, all demand models have “uncertainty.” As explained in the Draft SEIS and Appendix AA, *Traffic Forecast Report*, there are a number of reasons that Alternative 2B would have greater travel demand than Alternative 1 – No Action. Alternative 2B offers more opportunities to travel and provides greater flexibility in arrivals and departures, which coincides more closely with the time of the traveler’s choosing. It provides this opportunity at a greatly reduced user cost in terms of both time and money.

**Visitor industry:** The East Lynn Canal Highway would bring approximately 164,500 new visitors (including non-Alaskans, Haines and Skagway residents, and others) to Juneau annually by 2020. This number would increase over time, as markets and travelers adjust to the improved access. This is once again an un-verified assumption by DOT&PF based on a flawed travel demand model.

RESPONSE: The impact analysis is not based on mere assumption. The analysis is done by professionals with expertise doing this type of analysis, is based on sound methodologies, and uses updated base data. Section 3.1.4.2 of Appendix EE, *Socioeconomics Effects Technical Report*, of the Draft SEIS described the methodology used to estimate the number of new visitors.

TGSC will argue that do to comfort, convenience, and the costs of not having a car, most outside visitors would prefer the scenic AMHS's Lynn Canal route. It is noted by DOT&PF that Skagway is

one of the most profitable ports in Alaska for the cruise lines and passenger satisfaction ratings are very strong for Skagway. AMHS is for many visitors both inside and outside the state an option for cruise ship travel.

**RESPONSE:** The effects on visitors due to the changes anticipated from the alternatives are fully described in the Draft SEIS. For visitors that currently walk on to the ferry in Auke Bay, they would need to obtain a ride to the ferry terminal at Katzebin, rent a car, or take a plane. The Draft SEIS does not anticipate cruise ship visitors would be part of the demand that would use the proposed alternatives. Those passengers would continue to arrive in Skagway by boat (on the cruise ships), and Skagway would continue to be one of the most profitable cruise ports in Alaska. The proposed project alternatives are expected to have little impact on the cruise ship industry in Lynn Canal.

Independent visitors: Skagway would benefit from increased independent visitor traffic with the East Lynn Canal Highway. New visitor traffic to Skagway with the East Lynn Canal Highway is expected to total approximately 105,400 new visitors in 2020. This does not include Skagway resident traffic or current baseline traffic (the volume of traffic that already travels to or through Skagway).

As noted before few people are likely to take a car with them to visit Skagway: Most of Skagway is within a mile of the ferry terminal and the DSEIS presents data that 700,000 – 800,000 per year visitors access Skagway by just a boat, about 100% more than by auto.

There is virtually no need for people traveling from Juneau or Haines to Skagway to take a car with them. It makes no economic sense to take a car when you can access the city by a 5 minute slow walk from the AMHS ferry dock.

**RESPONSE:** The vast number of visitors who arrive in Skagway by boat, as cited in the comment, represent cruise ship visitors. The proposed alternatives are expected to have little effect on the cruise ship industry in Lynn Canal. Those visitors are not part of the demand that would use the proposed alternatives and would continue to arrive in Skagway by boat (i.e., on cruise ships).

Regarding the concern that there is “virtually no need for people traveling from Juneau or Haines to Skagway to take a car with them,” the Draft SEIS does discuss walk-on passengers. The road alternatives (Alternatives 2B and 3) represent a shift in the way transportation would be provided in the corridor—away from a primarily public transportation mode that would operate more like a public transit service, to a highway system where private vehicles would provide most of the transportation (publicly owned shuttle ferries would provide shorter links connecting the roadways). DOT&PF and FHWA recognize that this shift would have had an effect on walk-on passengers. Sections 4.3.7.5 and 4.4.7.5 of

the Draft SEIS describe impacts to “Pedestrians and Bicyclists” for Alternatives 2B and 3, including walk-on passengers.

It is true that DOT&PF and FHWA do not anticipate that walk-on passengers would continue to find it convenient to have someone drive them to the ferry terminal as they currently do. Walk-on passengers are currently able to ride on a subsidized ferry for a long portion of the trip, and under Alternatives 2B or 3, they would need to drive or be driven for most of the route. The Draft SEIS anticipated that many current walk-on passengers that own vehicles would likely choose to travel by car if a highway were available in the Lynn Canal corridor. In part, this is because of the cost of travel to the user. Both the ticket for the ferry and the overall out of pocket cost would be less than Alternative 1 – No Action. Travelers without access to a vehicle would have needed to rent a vehicle, take a commuter flight, or travel on private carriers (if they develop) to accommodate this demand.

**Local tax revenues:** Additional visitor spending in Juneau would total approximately \$12.7 million annually in 2020, generating approximately \$630,000 in additional sales tax revenues. The CBJ could also expect some increase in property tax revenues and bed tax revenues. This is once again an unverified assumption by DOT&PF based on a flawed travel demand model.

RESPONSE: The impact analysis is not based on mere assumption. The analysis is done by professionals with expertise doing this type of analysis, is based on sound methodologies, and uses updated base data. Section 3.1.4.2 of Appendix EE, *Socioeconomic Effects Technical Report*, in the Draft SEIS described the methodology used to estimate additional visitor spending. The increased visitor spending would be expected to result in an increase in hotel/motel room tax revenues for the City and Borough of Juneau. Due to improved access, Alternative 2B would increase the value of private property along the highway, though the extent of that increase is difficult to estimate. The City and Borough of Juneau would have an increase in property tax revenues because of this increase in property values.

### **ES 1.3.3 Haines**

**Transportation:** The East Lynn Canal Highway would not result in a substantial change in barge service to Haines. Freight that is now shipped to Haines on the ferry would be trucked from Juneau, at a lower cost than is now possible with ferry service.

That freight from Juneau to Haines would be a lower cost has been disputed in TGSC's user/benefit section i.e.: AMWS has no need of having a driver for every container to get to Haines and Skagway of from Juneau to them. The Alternative 2b road would have the opposite causing more cost. This is a cost burden on the 2b road and the added cost would be put onto the cities of Skagway and Haines who receive about 16 vanloads per week by ferry. (*Department of Administration, State of Alaska, Division of Motor Vehicles*) Percentage of trucks versus passenger vehicles is about twice as high in Skagway (62%) and Haines (72%) as in Juneau (38%).

RESPONSE: Additional information has been added to the Final SEIS in Section 4.3.5 regarding the numbers of unaccompanied vans that are currently shipped on the AMHS and the implications of this change.

### **ES 1.4.2 Juneau**

**Independent visitors:** The West Lynn Canal Highway would bring an estimated 129,700 new visitors to Juneau in 2020. This includes additional non-Alaskans and residents of Haines, Skagway, and Whitehorse.

That the WLCH would bring in 129,700 new visitors to Juneau in 2020 seems unlikely when airline service is faster and cheaper.

RESPONSE: As stated above, the impact analysis is not based on mere assumption. The analysis is done by professionals with expertise doing this type of analysis, is based on sound methodologies, and uses updated base data. Alternative 3 would increase access to Juneau from other Lynn Canal communities. Airline service is not cheaper, and many visitors are traveling by vehicle on the Alaska-Canada Highway or are visiting Juneau and would now likely choose to rent a car and go to Haines or Skagway (or points further up the road system) because of the improved frequency of service and lower costs and travel time of making the trip. Note, that all travelers who are currently on the mainliner in Lynn Canal would now board/disembark the ferry in Juneau and travel up Lynn Canal on Alternative 2B or 3.

### **Conclusion:**

The Social Economic Report is based on an unconstrained forecast model that is flawed at its base because of its uncertain assumptions and therefore everything it is based on is uncertain also.

Documents such as the McDowell Group house hold surveys done in 2003 are blatantly outdated.

RESPONSE: The traffic forecast model was developed based on empirical data derived from actual travel conditions observed in communities with similar geographic characteristics as Juneau in Alaska and Western Canada. The model was validated against existing travel demand by ferry within Lynn Canal. To forecast traffic demand for each of the alternatives, the model considered various factors relating to travel time, cost, and convenience of travel.

The results of the 2003 household survey were not used in developing the model.

**No committed Funding to Complete the Alt 2b Road to Katzehin and to build the Marine Segments in Alt 2b:**

This is a Federal Highway Administration (FHWA) project. FHWA is the lead agency. DOT&PF is a cooperating agency and the applicant for federal aid. Alternate 2B highway construction cost will be about 20% state and 80% federal-aid. (\$523,000,000) (Pg 2-34) Missing is any discussion of the funding guidelines of the U.S. Department of Transportation or the probability of increased or decreased funding from the Federal Government. (Apdx D – Technology Alignment Report).

RESPONSE: DOT&PF is not a cooperating agency, however, it is the State applicant for Federal-aid.

The actual State/federal-aid funding split is 9.03 percent State and 90.97 percent federal.

Environmental documents typically do not include information on U.S. Department of Transportation funding guidelines. However, "A Guide to Federal-aid Programs and Projects," which discusses federal-aid funding types and associated requirements may be found on FHWA's website at: <http://www.fhwa.dot.gov/federalaid/projects.cfm>.

Highway capital construction costs (\$523,000,000) are based on 2012 unit costs with a majority of the construction priced at 5% contingency for construction expected to run into 2020. Five (5) per cent seems rather ordinary for a project of this nature going through un-developed harsh terrain. This flags the risk of cost overruns. To better inform the public a draft memorandum of understanding between the U.S. Department of Transportation and the state laying out financial responsibility for overrun should be made.

RESPONSE: The construction costs have been updated for the Final SEIS and developed in the *2017 Update to Appendix D - Technical Alignment Report*.

The construction contingency for Alternative 2B was appropriate given the level of design development. The segment from Echo Cove to Sweeny Creek was developed through final design in 2006 after the 2006 Record of Decision, which justifies the 5 percent contingency amount.

A geotechnical investigation that identified all geologic hazards for Alternative 2B within the segment from Independence Creek to the south bank of the Katzehin River was completed in 2006, and was subsequently updated in 2012 in support of the Draft SEIS. Preliminary geotechnical recommendations were developed to address all identified geologic hazards in response to comments and are reflected in the updated cost estimate in Attachment E of the *2017 Update to Appendix D - Technical Alignment Report* in the Final SEIS. Although additional costs due to geotechnical hazard mitigation have been included in the cost estimate, the final design has not been completed, so a 10 percent contingency is appropriate.

From the south bank of the Katzehin River to the proposed Katzehin Ferry Terminal, the contingency amount of 5 percent is appropriate because this section of roadway is located on relatively flat terrain and the potential for unforeseen circumstances is low. The greatest portion of the cost for this segment is the Katzehin Bridge, which amounts to over 70 percent of the cost estimate for this segment. Bridge superstructures are well defined with a low potential for unforeseen conditions that would impact cost. The bridge piling size and length estimates were based on preliminary geotechnical results within the corridor. In addition, there is substantial historic cost data throughout the State that was used to estimate bridge construction costs. This further justifies the 5 percent contingency amount.

The original survey data collection for Alternative 2B was completed in 2002. DOT&PF elected to collect updated survey data for the entire Alternative 2B alignment in 2013 and 2014 to strengthen final design activities. Since 2002, there have been substantial improvements to LiDAR sensors and collection/processing techniques that improve the bare earth surface modeling for design. This updated data collection effort further validated the estimated quantities included in the construction cost estimate for Alternative 2B. For this reason, the contingency amounts were left unchanged from the Draft SEIS.

Justified construction overruns are eligible for federal-aid funding.

Also the Federal Spigot of highway funding is un-certain and has been not keeping up with basic national transportation needs for years. ASCE says:

*Current federal funding is insufficient to sustain America's existing highway system. The American Society of Civil Engineers 2013 report card for infrastructure nationwide reads "Roads: Targeted efforts to improve conditions and significant reductions in highway fatalities resulted in a slight improvement in the roads grade to a D this year. However, forty-two percent of America's major urban highways remain congested, costing the economy an estimated \$101 billion in wasted time and fuel annually. While the conditions have improved in the near term, and federal, state, and local capital investments increased to \$91 billion annually, that level of investment is insufficient and still projected to result in a decline in conditions and performance in the long term. Currently, the Federal Highway Administration estimates that \$170 billion in capital investment would be needed on an annual basis to significantly improve conditions and performance*

(<http://www.infrastructurereportcard.org/a/#p/overview/executive-summary>)

It is unlikely that Alaska is getting any increase in annual FHWA funding and it may go down. The Juneau Access Improvement project (JAI) does not appear to rise to a necessary let alone an urgent need for Federal funding compared to maintaining and repairing current infrastructure both state and national.

RESPONSE: On December 4, 2015, the Fixing America's Surface Transportation (FAST) Act, a 5-year transportation bill that will provide stability in funding over the life of the bill, was signed into law. The FAST Act slightly increased annual highway funding for Alaska.

### **User Benefits:**

DOT&PF SDEIS pdf page 7 of appendix FF User Benefit, Life-cycle Cost, and Total Project Life Cost Analyses:

The user costs included in calculating user benefits are the costs of traveler's time, AMHS fares, vehicle operating, maintenance, ownership costs and vehicle accident costs.

This does not include the term "freight." It is noted in the Socioeconomic Effects Technical Report that under 2b there would be a small use of the road for freight transportation to the lower 48 or North (nothing specific about this) based on time of transportation. There is nothing to back up this assumption, such as how much time does it take to drive a freight truck from Skagway to the Alaska Highway through British Canada and to the lower 48 states. Also, the time for driving freight trucks on the east side road, which is not designed for that kind of transportation. There is also no quantified analysis or data about the heavy use of AMWS for getting goods to Haines and Skagway. AMWS has no need of having a driver for every container to get to Haines and Skagway. The Alternative 2b road would have the opposite causing more cost. This is a cost burden on the 2b road and the added cost would be put onto the cities of Skagway and Haines who receive about 16 vanloads per week by ferry. (*Department of Administration, State of Alaska, Division of Motor Vehicles*) Percentage of trucks versus passenger vehicles is about twice as high in Skagway (62%) and Haines (72%) as in Juneau (38%).

The negative effect to Haines and Skagway is not quantified in the SDEIS's user benefit analysis.

**RESPONSE: Effects on Haines and Skagway Freight Service:** Weekly barge service is the primary mode of surface freight transportation for Haines and Skagway. According to AMHS data, Haines had a total of 201 van arrivals in 2014, an average of approximately four per week. Skagway had 85 van arrivals in 2014, an average of less than two per week. Under Alternative 2B, the capacity to move freight, especially time-sensitive goods, to Haines and Skagway from Juneau would be greatly increased with multiple shuttle ferry trips daily. Businesses that now rely on third-party trucking companies to transport freight on the AMHS may find it advantageous to use their own vehicles and staff to transport freight more frequently from Juneau suppliers, at a lower cost than now possible with third-party service providers. For those businesses that choose to continue relying on third-party shippers to move freight

from Juneau, or from Seattle through Juneau, any changes in freight costs would depend on how trucking companies modify their services and operations to efficiently work within the new Lynn Canal transportation infrastructure (associated with Alternative 2B). The current model for Juneau-Haines and Juneau-Skagway ferry freight service, where vans are transported on the ferry without driver and tractor, may be replaced in part with a model where smaller, lower-cost vehicles provide more frequent scheduled or on-demand service, with the driver accompanying the vehicle during the round trip. A number of factors dictate how the private sector would respond to Alternative 2B, particularly the cost of driver/tractor/trailer on the shuttle ferry (versus the cost of unaccompanied van transport from Auke Bay). The shuttle ferry fare structure for heavy trucks and other commercial vehicles has not yet been determined.

**Freight to/from the Lower 48:** Long-haul trucking along the Alcan Highway is a proven mode of Alaska and Yukon freight transportation. More than 100,000 tons of freight is trucked into Alaska each year, and approximately 60,000 tons of freight is annually trucked into Whitehorse. With improved Lynn Canal access, Juneau would be better positioned to benefit from the trucking capacity and services already established on the Alcan Highway. The cost and range of trucking services to/from Juneau would evolve over time as volumes increase and markets expand.

With improved highway access, northern Southeast Alaska could develop relationships with supply centers other than Seattle. Overland shipment of freight from Canadian or United States Midwest commercial centers, for example, may be competitive with Seattle barge service or Bellingham ferry service, particularly if some of the supplies moving through Seattle originate outside of the Puget Sound area. The communities of Haines and Skagway would also benefit from this overall increase in freight trucking activity.

Whitehorse is supplied by truck from several key commercial centers such as Edmonton (1,286 miles away), Calgary (1,421 miles away), and Vancouver (1,492 miles away). Trucking to Juneau from various Canadian supply centers would require approximately 2 hours more than is required to reach Whitehorse.

With improved access, over the long term Juneau would experience increased use of overland trucking of basic goods into Juneau, as more businesses take advantage of the scheduling flexibility trucking provides. As described in the Draft SEIS, highway access would give businesses and consumers the opportunity and versatility to choose a shipping mode that best meets their specific needs, particularly for time-sensitive goods. Further, shipment of time-sensitive products out of Juneau, such as fresh fish, would create lower-cost back-haul opportunities for the region's communities. Some fresh fish is currently ferried from Juneau to Skagway, then trucked to Lower 48 markets.

In Executive Summary, Appendix EE - Socioeconomic Effects Technical Report, DOT&PF explains:

"The handling and ferry costs associated with barging freight to Juneau, then trucking to Haines or Skagway, would limit transshipment in Juneau of freight moving from Seattle to Haines or Skagway.

Barges will remain the mode by which most freight is shipped to Juneau. However, an improved highway connection would provide minor to substantial benefits to the fishing industry or other manufacturers producing time-sensitive goods. Shipment of time sensitive products out of Juneau would create lower-cost back-haul opportunities. Over the long term, Juneau would experience increased use of overland trucking of basic goods into Juneau, as more individual businesses consider the scheduling flexibility trucking provides. The cost and inconvenience associated with a ferry would be constraints on truck use.

Neither statement is supported by any financial or analytical data. And as explained before, the AMWS has no need of having a driver for every container to get to Haines and Skagway and back to Juneau.

**RESPONSE:** Additional information has been added to Section 4.3.5 of the Final SEIS.

There is lack of analysis on the out of pocket expenses for that the current walk-on ferry passengers will occur when having to travel by car, bus, or taxi. The 45%.

**RESPONSE:** Additional information about the anticipated fares for the various travel markets (walk-on passengers, single drivers with a vehicle, etc.) has been added to the Final SEIS. Anticipated walk-on passenger costs have been added in the "State and User Costs" subsection of each alternative's impact evaluation in Chapter 4. For Alternative 2B this is found in Section 4.3.7.4.

**Net Present Value: No alternative except for the no action is in the public interest in terms of cost**

When evaluating whether to schedule new highways in the state transportation plan, DOT&PF is required to consider the "cost-effectiveness" of project. *See* AS 44.42.050(e). As noted in appendix FF (at 18), "Generally, the present value of user benefits minus project cost is the best measure of economic efficiency."

One of the purposes behind the Alaska State Legislature's making of DOT&PF responsible for development and maintenance of the state highway system is to "improve the economic and general welfare of the people of the state" (AS 19.05.125). None of the "action" alternatives are worth more than they cost, considering all resources (State and federal) required to build and to operate the project. This is true under all sensitivity cases, as well as the base case (page 7 of appendix FF). All alternatives except the no action will have more than a 1 billion life time cost.

Alternative 2b in a negative 309 million cost/benefit lifetime.

Alternative 4D – Monohull Berners Bay has the smallest loss in net present value (NPV) in all cases- \$25.6 million in the base case.

Alternative 4C - Monohull Auke Bay has the second smallest loss.

**Conclusion:** It is obvious that the preferred Alternative 2b is not in the Public, State or National interests in terms of costs vs economic benefits and efficiency which is part of DOT&PF's SDEIS's P&N. Reducing State and public costs over the long term.

RESPONSE: Cost-benefit ratios described in the Draft SEIS were not intended to represent a full measure of all benefits and costs associated with project alternatives. In fact, cost-benefit ratios described in Appendix FF of the Draft SEIS were narrowly based on user (traveler) benefits alone and did not consider a wide range of other potential household, commercial, industrial, and community benefits associated with improved Lynn Canal access.

The purpose of the economic efficiency and cost-effectiveness analysis conducted as part of the Draft SEIS was to determine which alternatives serve the largest number of users (travelers) at the lowest possible cost. The fact that all cost-benefit ratios calculated in Appendix FF are less than 1 does not mean investment in better infrastructure is imprudent. It primarily shows that transportation infrastructure costs are very high in Alaska, where populations are generally small, distances long, terrain often challenging, and sea conditions often difficult.

**SAFETEA-LU did not grant specific rights-of-way or easements or exempt them from environmental requirements.**

The DSEIS contends that Section 4407 of the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users, Pub. L. 109-59 (2005) (SAFETEA-LU) overrides several applicable requirements, including those in the Roadless Rule. The DSEIS explains that "[i]f for some reason [the Alaska DOT] could not use all or a portion of this easement or the alignment was shifted outside this easement, [the FHWA] would secure a transportation easement across Tongass National Forest through a federal land appropriation process authorized by 23 [U.S.C. §] 317." *Id.* at 4-35.

According to the DSEIS, "[t]he State of Alaska believes an analysis under the Roadless Rule (of whether other reasonable and prudent alternatives exist that do not use Inventoried Roadless Areas) is not required for this project because Congress authorized the granting of the SAFETEA-

LU 4407 transportation easements." (DSEIS at 4-3). The DSEIS explains that "[t]he Roadless Rule prohibits road construction in inventoried roadless areas, unless road construction is conducted under an exempted circumstance, including when a road is "provided for by statute or treaty." *Id.* at 3-6 (quoting 36 C.F.R. § 294.12(b)(3)). The DSEIS asserts that Congress granted transportation and utility easements to the State of Alaska for each side of Lynn Canal and "[b]ecause the [Juneau Access] Project easement is provided by statute, an analysis of other "reasonable and prudent" alternatives need not be conducted prior to the Forest Service's issuance of the 4407 easement.

As an initial matter, Section 4407 of SAFETEA-LU references a map of state and federal easements and rights-of-way in southeast Alaska; it does not unambiguously grant any particular rights-of-way or easements. *See United States v. Union Oil Co.*, 549 F.2d 1271, 1273 n.5 (9th Cir. 1977) (Where the conveyance of federal land is at issue, "nothing passes except what is conveyed in clear language . . . .") (quoting *United States v. Union Pac. R.R.*, 535 U.S. 112, 116 (1957)). Here, the language in Section 4407 offers no legal descriptions of the purported conveyances (e.g., township, section, and range). After SAFETEA-LU's enactment, the Forest Service and State of Alaska executed a memorandum of understanding, which memorialized the parties' interpretation of SAFETEA-LU; the memorandum of understanding directly contradicts the interpretation advanced in the DSEIS. According to the memorandum of understanding, the Forest Service and the State interpret Section 4407 largely as a measure to streamline the process for granting rights-of-way needed by both the State and the Forest Service. The memorandum of understanding specifically recognizes, contrary to the assertions in the DSEIS that the provision does not displace other laws and that the parties can only grant the easements and rights-of-way identified if the conveyance is "consistent with their respective obligations to protect scenic, archaeological, recreation, and fish and wildlife values, resources and habitats on National Forest System lands and State of Alaska lands." Indeed, the Alaska U.S. District Court has ruled Section 4407 "does not identify any easement with specificity" and that the memorandum of understanding was negotiated due to the statute's "vague nature." *Se. Alaska Conservation Council v. Fed. Highway Admin.*, 1:06-CV-00009 JWS, 2013 WL 5532835 (D. Alaska Oct. 3, 2013).

**RESPONSE:** Since this comment was submitted in November 25, 2014, Section 4407 of SAFETEA-LU, was amended by Congress in Section 1446 of the 2015 transportation authorization legislation known as

the FAST Act. As amended, Section 4407 expressly grants rights-of-way and easements to the State. Congress reserved no discretion to the U.S. Forest Service (USFS) to limit the use of those rights-of-way and easements, through the Roadless Rule or other USFS processes and requirements.

In the FAST Act, Congress provided technical corrections to Section 4407 of SAFETEA-LU to clarify the transportation and utility rights-of-way and easements are granted. As amended, Section 4407 reads: “Notwithstanding any other provision of law, the reciprocal rights-of-way and easements identified on the map numbered 92337 and dated June 15, 2005, are granted.”

Section 4407’s Map 92337 depicts the locations of transportation and utility corridors connecting the communities of Southeast Alaska. The lines on the map depicting the transportation and utility corridors scale to approximately 1 mile wide. After the congressional establishment of the Section 4407 transportation and utility corridors, the United States and the State of Alaska executed a memorandum of understanding (MOU) that provides a process for precisely locating a 300-foot-wide highway and utility easement within the identified transportation and utility corridors. The precise location of the highway facility is determined through environmental review and permitting for construction of the highway. Once a project receives construction authorizations from State and regulatory agencies (other than the U.S. Forest Service [USFS]), then USFS must issue the Section 4407 easement for construction and operation of the highway facility. This process was recently summarized in the Congressional directive accompanying the Section 4407 amendment:

“As soon as possible, the Committee intends the Secretary of Agriculture (Secretary) to prepare and deliver to the State of Alaska an easement for the construction and operation of each highway located in a transportation and utility corridor identified on Map 92337 where the State of Alaska has already secured all necessary Federal and State permits for the construction of each highway facility. ... The Committee intends that the Secretary of Agriculture will not withhold or deny the issuance of an easement for a proposed transportation or utility project that otherwise has all necessary construction permits and authorizations from other State and Federal agencies.” (Senate Report 114-80:23-24 [July 15, 2015])

The Roadless Rule excepts classes of road projects from its general prohibition, including an exception when the Secretary of Agriculture determines that a road is provided for by statute or treaty (36 Code of Federal Regulations [CFR] 294.12(b)(3)). Transportation and utility rights-of-way and easements along the east and west sides of Lynn Canal were granted to the State of Alaska by Congress in SAFETEA-LU's Section 4407. Thus, the Secretary of Agriculture need only to make an affirmative finding that Congress provided a highway easement by statute in order to fulfill the requirements of the Roadless Rule.

Additionally, the DSEIS's contrary interpretation focuses entirely on the portion of Section 4407 that reads "notwithstanding any other provision of law." The DSEIS, however, ignores the fact that "notwithstanding" phrases are not dispositive and courts regularly interpret similar language to be narrower than the potential scope of the phrase. *See United States v. Novak*, 476 F.3d 1041, 1046-47 (9th Cir. 2007) (noting that "notwithstanding any other provision of law" phrases are "not always construed literally" and must be read in context) (citations omitted); *Nw. Forest Res. Council v.*

*Pilchuck Audubon Soc’y*, 97 F.3d 1161, 1167 (9th Cir. 1996) (finding that similar "notwithstanding" language did not preempt National Forest Management Act regulations where nothing in the language indicated an intent to preempt those regulations). Courts consider the language and structure of the statute and the relevant legislative history in interpreting the scope of such phrases. *See, e.g., Nw. Forest Res. Council*, 97 F.3d at 1166-67 (considering language of Rescissions Act); *In re Glacier Bay*, 944 F.2d 577, 582-83 (9th Cir. 1991) (examining structure of provisions of conflicting laws); *Miller v. United Food & Commercial Workers Union*, 708 F.2d 467, 470-71 (9th Cir. 1983) (considering legislative history).

In sum, the DSEIS erroneously suggests that Section 4407 of SAFETEA-LU grants the State specific rights-of-way or easements. SAFETEA-LU does not exempt conveyances from other applicable requirements like the Roadless Rule because Section 4407 affords the Forest Service considerable discretion in approving those conveyances, including requiring the State to comply with all applicable Federal laws and regulations for all federally funded highway projects.

RESPONSE: Section 4407 does not explicitly “afford” the USFS any discretion in approving the conveyances. It is silent on the matter, except to state that Congress granted the easements within a certain area, and the area includes Inventoried Roadless Areas. The Draft SEIS does not “suggest that Section 4407 of SAFETEA-LU grants the State *specific* rights-of-way or easements” (emphasis added). Rather, SAFETEA-LU and the FAST Act granted general easements defined by a wide corridor on an accompanying map. Because Congress enacted wide areas from which to define the specific easement, the State of Alaska and USFS developed an MOU to specify how the easements would be made specific. Language in the Final SEIS has been reviewed and revised as necessary for clarity on these points.

**Conclusion:** The SDEIS is so biased to the preferred alternative, full of assumptions, lacking data, and uncertain in its assumptions, it should be thrown into the re-cycle bin and DOT&PF should start over.

**Resource Documents:**

Most if not all resources cited are already in the project's public record. Documents and tables for the Alternative's 1 b optimized and Alt 5 are in the public record by submission from the Skagway Marine Access Committee, as with the McDowell Group studies.

## **Alaska Wilderness League**

### **Form Letter 1**

*Note: All communications were received as a spreadsheet from Alaska Wilderness League. The form letter is as follows:*

Attached are public comments from roughly 3,900 individuals requesting that the Department of Transportation reject Alternative 2B, known as the East Lynn Canal Highway that would construct a new road through the Tongass National Forest along the steepest and deepest fjord in North America. Please consider each signature a unique comment. The signatures include the name, city and state of the signee and in many cases a personal comment above and beyond the aforementioned request.

According to your own analysis, this road will cost more per year than existing ferries and take more lives. That's not including the \$574 million it will take to bulldoze a 48-mile dead-end that forces drivers to traverse 40+ active avalanche chutes.

All commenters request that you make the right decision and save lives and dollars by abandoning this wasteful project idea.

## Earthjustice

### Form Letter 2

*Note: All communications were received as a spreadsheet from Earthjustice. The form letter is as follows:*

I support community-to-community ferry service, and oppose the Alternative 2B, an East Lynn Canal Highway to Katzehin with shuttles to Haines and Skagway, the State of Alaska's preferred alternative in the Juneau Access Improvements Project Draft Supplemental Environmental Impact Statement.

The State of Alaska's plan to build this 50-mile, \$574 million road will not connect Juneau to the State road system. Instead the route will dead-end at the uninhabited Katzehin River delta where travelers would board a ferry to reach Haines or Skagway. Building a new ferry terminal 90 miles from downtown Juneau makes travel more expensive, time consuming, and dangerous. Alaska's ferry system already connects Juneau to Haines and Skagway in a safer and cheaper fashion.

Alternative 2B, the Katzehin road, also is the most environmentally damaging of all alternatives described in the Draft Supplement Environmental Impact Statement. The road would cut through and permanently compromise Berners Bay, which is one of the most important marine and estuarine ecosystems in Alaska. The area is renowned for spring runs of both eulachon and Pacific herring, which attract record numbers of marine mammals, including humpback whales and Steller sea lions, and tens of thousands of waterbirds. Berners Bay is so spectacular that Congress designated it one of twelve roadless areas in the Tongass National Forest, which were "chosen for special management because of their critical importance for fish and wildlife habitat and their high value to tourism and recreation." All of what is special about this place could change with this dangerous, ill-planned, and terribly expensive project.

I encourage you to reject the State of Alaska's proposal to build this dead-end road and instead protect the roadless areas in the Tongass. Thank you for considering my comments.

## Care2

### Form Letter 3

*Note: All communications were received via email from individual commenters. The form letter is as follows:*

I strongly oppose construction of the new Juneau Access Road. Local residents have made it clear that the road is a bad idea, and would prefer better ferries instead. This is a colossal waste of half-a-billion dollars, puts our pristine wildlands and precious wildlife at risk, and exposes drivers to an enormous avalanche risk. There are better ways to spend our money!

## **Southeast Alaska Conservation Council (SEACC; Version 1)**

### **Form Letter 4**

*Note: All communications were received via email from individual commenters between September 24 and November 4, 2014. The form letter is as follows:*

The State’s plan to build a road half-way up the Lynn Canal is more dangerous, more expensive, more divisive and more damaging than existing ferry service. I support community-to-community marine service, and oppose the alternative 2B, an East Lynn Canal Highway to Katzehin with shuttles to Haines and Skagway, the State’s preferred alternative in the Juneau Access Improvements Project Draft Supplemental Environmental Impact Statement.

DOT’s draft Southeast Alaska Transportation Plan (SATP) should also be revised to focus on maintaining proven marine transportation throughout the archipelago rather than focusing inappropriately on constructing costly and controversial new roads.

The draft SATP suggests the three fifty year-old mainline ferries should be replaced in the next ten years “if the funding becomes available”. With the \$574 million the State plans to spend on constructing a road to the Katzehin we could construct TWO mainline ferries or address the half-billion dollar backlog in deferred maintenance for all of Alaska’s existing roadways.

In addition to the outrageous capital costs associated with constructing a road, the operating costs will also be higher. The EIS states “both the capital and operating costs for Alternative 2B [road] would be greater than those associated with the No Action [ferry] Alternative” (page 4-61). In fact, the state will have to pay \$5 million more each year to keep the fifty-mile avalanche-prone road open. That is \$5 million that could go toward urgent State needs, including our schools, every single year.

The Katzehin road is an abnormally expensive proposal because of the extreme geography of the Lynn Canal. Six thousand foot mountains plunge into the steepest, deepest fjord on North America. The study identified 41 avalanche chutes and even more landslide, rockslide, and rock fall areas. Three bridges, each more than four times longer than Juneau-Douglas Bridge, would span five glacial rivers. Some sections of the road would be built below mean-high tide. Other sections would be carved into the mountainside and in at least two areas tunnels would be blasted through the cliffs. Three additional tunnels in the form of snowsheds along with extensive avalanche blasting will be needed to keep the route open in the winter.

DOT anticipates over 22 crashes per year – over 600 crashes and 5 fatalities over the next thirty years on this type of two-lane road (page 4-63). Those estimates don’t even take into account the added dangers of avalanches, rockslides, and icing that exist with this particular road. No deaths have occurred aboard the Alaska Marine Highway System in over 50 years of service.

Placing a new ferry terminal 90 miles from downtown Juneau will make travel far more complicated, especially for walk-on passengers. The Katzehin road alternative would actually cost travelers more money than walking aboard the existing ferry system. Today it would cost a traveler in Juneau \$37 to get to Haines and \$50 to get to Skagway. DOT estimates that under its

road scenario the out-of-pocket costs would be \$47 to get to Haines and \$67 to get to Skagway (page 2-16).

Furthermore, DOT's assertion that travel in the Lynn Canal corridor will increase by a factor of ten if the Katzehin road is constructed is unfounded and disingenuous.

Alternative 2B, the Katzehin road is the most environmentally damaging of all alternatives described in the EIS, crossing ten anadromous streams and, destroying 130 acres of wetlands, tidal areas, and fish habitat. Increasing access to Berners Bay would likely compromise hunting opportunities for moose, bear, and goat by increasing competition. Road access would make it incredibly challenging to protect vital salmon and eulachon spawning habitat in the bay from Off Road Vehicles. Berners Bay is also culturally significant as the ancestral land of the Awk Kwan Thlinget and has numerous burial sites that could be disturbed.

Alaska must be smart about how we spend our dwindling transportation dollars. Please cancel the Katzehin road proposal and opt for community-to-community ferry service. Please also revise the SATP to reflect the region's top priorities of maintaining our existing roads and replacing our aging mainline ferries.

Thank you for including these comments in both the draft 2014 SATP and Juneau Access Improvement Project Supplemental Environmental Impact Statement SEIS records.

## SEACC (Version 2)

### Form Letter 5

*Note: All communications were received via email from individual commenters between November 4 and 18, 2014. The form letter is as follows:*

The State's plan to build a road half-way up the Lynn Canal is more dangerous, more expensive, more divisive and more damaging than existing ferry service. I support community-to-community marine service, and oppose the alternative 2B, an East Lynn Canal Highway to Katzehin with shuttles to Haines and Skagway, the State's preferred alternative in the Juneau Access Improvements Project Draft Supplemental Environmental Impact Statement.

The draft SATP suggests the three fifty year-old mainline ferries should be replaced in the next ten years "if the funding becomes available". With the \$574 million the State plans to spend on constructing a road to the Katzehin we could construct TWO mainline ferries or address the half-billion dollar backlog in deferred maintenance for all of Alaska's existing roadways.

In addition to the outrageous capital costs associated with constructing a road, the operating costs will also be higher. The EIS states "both the capital and operating costs for Alternative 2B [road] would be greater than those associated with the No Action [ferry] Alternative" (page 4-61). In fact, the state will have to pay \$5 million more each year to keep the fifty-mile avalanche-prone road open. That \$5 million could go to any number of State needs, including funding about 50 teachers.

The Katzehin road is an abnormally expensive proposal because of the extreme geography of the Lynn Canal. Six thousand foot mountains plunge into the steepest, deepest fjord on North America. The study identified 41 avalanche chutes and even more landslide, rockslide, and rock fall areas. Three bridges, each more than four times longer than Juneau-Douglas Bridge, would span five glacial rivers. Some sections of the road would be built below mean-high tide. Other sections would be carved into the mountainside and in at least two areas tunnels would be blasted through the cliffs. Three additional tunnels in the form of snowsheds along with extensive avalanche blasting will be needed to keep the route open in the winter.

At least fifteen people are expected to die while driving between Auke Bay and the Katzehin over the next 30 years. Those estimates don't even take into account the added dangers of avalanches, rockslides, and icing that exist with this particular road. No deaths have occurred aboard the Alaska Marine Highway System in over 50 years of service.

Placing a new ferry terminal 90 miles from downtown Juneau will make travel far more complicated, especially for walk-on passengers. The Katzehin road alternative would actually cost travelers more money than walking aboard the existing ferry system. Today it would cost a traveler in Juneau \$37 to get to Haines and \$50 to get to Skagway. DOT estimates that under its road scenario the out-of-pocket costs would be \$47 to get to Haines and \$67 to get to Skagway (page 2-16), and even more for people who don't own or can't travel with a vehicle.

Furthermore, DOT's assertion that travel in the Lynn Canal corridor will increase by a factor of

ten if the Katzehin road is constructed is unfounded and disingenuous.

Alternative 2B, the Katzehin road is the most environmentally damaging of all alternatives described in the EIS, crossing ten anadromous streams and, destroying 130 acres of wetlands, tidal areas, and fish habitat. Increasing access to Berners Bay would likely compromise hunting opportunities for moose, bear, and goat by increasing competition. Road access would make it incredibly challenging to protect vital salmon and eulachon spawning habitat in the bay from Off Road Vehicles. Berners Bay is also culturally significant as the ancestral land of the Awk Kwan Thlinget and has numerous burial sites that could be disturbed.

Alaska must be smart about how we spend our dwindling transportation dollars. Please cancel the Katzehin road proposal and opt for community-to-community ferry service.

## SEACC (Version 3)

### Form Letter 6

*Note: All communications were received via email from individual commenters between November 18 and 25, 2014. The form letter is as follows:*

The Walker administration and the Federal Highway Administration should reject the Juneau road extension because it is too dangerous, too divisive, and has costs that far exceed the benefits. I support community-to-community marine service, and oppose alternative 2B, an East Lynn Canal Highway to Katzechin with shuttles to Haines and Skagway, the State's preferred alternative in the Juneau Access Improvements Project Draft Supplemental Environmental Impact Statement.

Industry standards dictate that a project with benefits to cost ratio of less than 1 should be dismissed. DOT's own study shows that the benefits to cost ratio of constructing a road is a startlingly low 0.28 (Append. FF, page 66). In other words, the cost of constructing and maintaining the 50-mile road and new ferry terminal is roughly four times higher than any economic benefit that could result from this project.

For anyone who has spent time in the Lynn Canal looking at the proposed road route, this finding isn't so surprising. Six thousand foot mountains plunge into the steepest, deepest fjord on North America. The study identified 43 avalanche chutes and even more landslide, rockslide, and rock fall areas. Three bridges, each more than four times longer than Juneau-Douglas Bridge, would span five glacial rivers. Some sections of the road would be built below mean-high tide. Other sections would be carved into the mountainside, and in at least two areas tunnels would be blasted through the cliffs. Three additional snowshed tunnels, along with extensive avalanche blasting, will be needed to keep the route open in the winter.

At least fifteen people are expected to die while driving between Auke Bay and the Katzechin over the next 30 years. Those estimates don't even take into account the added dangers of avalanches, rockslides, and icing that exist with this particular road. No deaths have occurred aboard the Alaska Marine Highway System in over 50 years of service.

Placing a new ferry terminal 90 miles from downtown Juneau will make travel far more complicated, especially for walk-on passengers. The Katzechin road alternative would actually cost travelers more money than walking aboard the existing ferry system. Today it costs a traveler in Juneau \$37 to get to Haines and \$50 to get to Skagway. DOT estimates that under its road scenario the out-of-pocket costs would bump up to \$47 to get to Haines and \$67 to get to Skagway (page 2-16), and even more for people who don't own or can't travel with a vehicle.

Furthermore, DOT's assertion that travel in the Lynn Canal corridor will increase by a factor of ten if the Katzechin road is constructed is unfounded and disingenuous. Relying on this overblown traffic forecast also puts the entire Alaska Marine Highway System further at risk – when traffic doesn't meet DOT's overblown projections, revenue will fall, putting the ferry system further in the red.

Alternative 2B, the Katzehin road, is the most environmentally damaging of all alternatives described in the EIS, crossing ten anadromous streams and destroying 130 acres of wetlands, tidal areas, and fish habitat. Increasing access to Berners Bay would increase hunting pressure for moose, bear, and goat, likely leading to reduced success rates and potentially new hunting restrictions. Road access would make it incredibly challenging to protect vital salmon and eulachon spawning habitat in the bay from Off Road Vehicles. Berners Bay is also culturally significant as the ancestral land of the Awk Kwan Tlingit and has numerous burial sites that could be disturbed.

The fiscal, social, and environmental costs are simply too high to consider proceeding with this project, especially considering that Alaska has numerous other transportation priorities. For example, DOT planning documents suggest the three fifty year-old mainline ferries should be replaced in the next ten years “if the funding becomes available.” With the \$574 million the State plans to spend on constructing a road to the Katzehin we could construct TWO mainline ferries or address the half-billion dollar backlog in deferred maintenance for all of Alaska’s existing roadways.

Alaska must be smart about how we spend our dwindling transportation dollars. Please cancel the Katzehin road proposal and opt for community-to-community ferry service.

Thank you for including these comments in the Juneau Access Improvement Project Supplemental Environmental Impact Statement SEIS records.

## Sierra Club

### Form Letter 7

*Note: All communications were received via email from individual commenters. The form letter is as follows:*

I strongly oppose Alternative 2B, the currently plan to build an East Lynn Canal Highway through the Tongass National Forest, the State of Alaska's current preferred alternative in the Juneau Access Improvements Project Draft Supplemental Environmental Impact Statement.

This current preferred alternative will result in the destruction and clearcutting of 53 miles through pristine roadless areas in the Tongass National Forest, destroying key wetlands and tidal areas, to ultimately arrive at a dead-end at an unmanned ferry terminal, not connected to any other Alaskan roadways.

The costs associated with this project will be entirely too high. The current plan will place drivers alongside the steepest, deepest fjord in North America, with an identified 41 avalanche chutes, and even more landslide, rockslide and rock fall areas. And in addition to the already hefty \$574 million it will take to build the highway initially, it will take an estimated additional 5 million annually, just for upkeep.

This plan will put Alaska's iconic wildlife in great danger as well, with the planned road to nowhere destroying and disrupting the habitats and wildlife corridors for iconic species like the bald eagle, moose, bear, and the Alexander Archipelago Wolf. Certain areas, like Berner's Bay, are world-renowned for spring runs of eulachon and Pacific herring, and attract record numbers of marine mammals like humpback whales and Stellar Sea Lions, areas which have even been designated by Congress as special management areas because of their critical importance to wildlife and human recreation; this plan will put that all in jeopardy.

Instead, I support a community-to-community ferry service, which will allow for transportation between the areas the highway seeks to connect, with much less impact on our crucial wild lands and animals, a lower cost to commuters, and a much less sizable burden on taxpayers.

I strongly encourage you to reject the State of Alaska's proposal to build this costly dead-end highway through roadless areas in the Tongass National Forest, and adopt a plan that will work best for the citizens and the natural integrity we so value in Alaska. Thank you for considering my comments.
